This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

+ *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.

+ *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.

+ *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.

+ *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at `http://books.google.com/`

PART 2.

WASHINGTON:
GOVERNMENT PRINTING OFFICE.
1895.

CONTENTS OF VOLUME II.

PART II.

CHAPTER XVI.—NAME REGISTER.

	Page.
Chief State school officers	637
List of city superintendents	638
College presidents	646

CHAPTER XVII.—CITY SCHOOL SYSTEMS.

Enrollment	661
Average attendance	663
Length of school term	663
Supervision	665
Number of teachers	667
Sex of teachers	668
School buildings	671
Number of sittings	673
School property	674
Expenditures	675
Table 1.—Summary of statistics of school systems of cities, showing increase or decrease from the previous year	677
Table 2.—Summary, by States, of population and school enrollment and attendance in cities	679
Table 3.—Summary, by States, of supervising officers, teachers, property, and expenditures of school systems of cities	680
Table 4.—Summary of statistics of public evening schools	681
Table 5.—Comparative statistics of school systems of cities	682

CHAPTER XVIII.—SECONDARY SCHOOLS.

Summary of statistics of public high schools	685
Of private secondary schools	688
Tables and diagrams illustrating status of secondary schools	690
Number of students in each branch of study in public high schools	695
Number of students in each branch of study in private secondary schools	698
Number and percentage of students pursuing certain studies to whole number of students.	701
Sex in secondary schools	707

CHAPTER XIX.—UNIVERSITIES AND COLLEGES.

Discussion of statistics	711
Professors and instructors	712
Students	713
Preparation of freshmen	719
Equipment	720
Income and benefactions	721
Degrees in letters, science, and philosophy	722
Honorary degrees	723
Chairs of pedagogy	725

CHAPTER XX.—COLLEGES FOR WOMEN.

Discussion of statistics	731

CHAPTER XXI.

THE PLACE OF UNIVERSITY EXTENSION IN AMERICAN EDUCATION	743

CHAPTER XXII.

Page.
THE RELATION OF THE INDEPENDENT COLLEGES TO THE SYSTEM OF STATE SCHOOLS... 753

CHAPTER XXIII.

RENSSELAER POLYTECHNIC INSTITUTE 757

CHAPTER XXIV.

UNITED STATES MILITARY ACADEMY AT WEST POINT 767

CHAPTER XXV.

THE CARE OF TRUANTS AND INCORRIGIBLES 775

CHAPTER XXVI.—COEDUCATION OF THE SEXES IN THE UNITED STATES.

Introduction 783
Status of public schools with respect to coeducation:
State systems 784
City systems 786
Coeducation in colleges and universities 794
The literature of coeducation 798
Physiological and hygienic bearings of higher education for women with special reference to coeducation 838
Views of college and university presidents and professors 846
Bibliography 860

CHAPTER XXVII.—EDUCATION OF THE COLORED RACE.

Public school statistics 861
Secondary and higher institutions 862
Universities and colleges 863
Northern aid to colored schools 865
Schools conducted by colored instructors 866
Industrial instruction 866
Institutions for the colored race, property 867

CHAPTER XXVIII.—REPORT ON EDUCATION IN ALASKA.

Number and general condition of the schools 873
Killing of Charles H. Edwards and the outrage upon J. E. Connett 878
Statistical tables 880
Supervision 884

CHAPTER XXIX.—HISTORY OF SUMMER SCHOOLS IN THE UNITED STATES.

Contents 893

CHAPTER XVII.

CITY SCHOOL SYSTEMS.[1]

I. ANALYSIS OF THE STATISTICS AND REMARKS SUGGESTED THEREBY: *Enrollment—Average attendance—Length of school term—Number of teachers—Sex of teachers—Supervision—School buildings—Number of sittings—School property—Expenditures.*

II. *Summary of statistics of city school systems, showing increase or decrease from previous year (Table 1)—Summary by States of population and school enrollment and attendance in cities of over 8,000 population (Table 2)—Similar summary of supervising officers, teachers, property, and expenditures (Table 3)—Similar summary of public evening schools (Table 4)—Comparative statistics (Table 5).*

ENROLLMENT.

If the figures which appear in this chapter possess any significance, it is that the educational conditions of the cities for this year are less favorable than in the year preceding. The first and best evidence of this is that the school enrollment has not kept pace with the increase in population. While the latter shows a gain of 5.56 per cent, the enrollment in public schools has increased but 4.27 per cent. The ratio of public school enrollment to total population has fallen from 14.74 per cent to 14.56 per cent.

This decrease can not be ascribed to a relatively greater increase in the patronage of private and parochial schools, for, of the whole number of school attendants, the proportion who are in private schools remains the same as last year, namely, 21.3 per cent. Plainly the loss of one of these classes of schools is not due to a gain of the other class. There has been actually a relative loss to school instruction.

Furthermore, this loss is not confined to any particular section of the country, but appears in four of the five geographical divisions, the South Atlantic being the only one to show a gain. Investigation as to the localities in which the lessened percentages are most conspicuous discloses several instances in which superintendents' reports have proudly pointed to increased numbers in the schools, regardless of the fact that the population from which the pupils were drawn had increased in a much larger ratio. Thus it has often happened that school officers have congratulated themselves because of fancied increase in educational prosperity, while the very same facts disclosed to other minds indubitable proofs of lessened popularity of the schools.

Many superintendents, however, have noticed with deep concern the failure of their schools to keep pace with the population, and have searched earnestly for causes and for remedies. Speculations as to the former and suggestions as to the latter have been many and varied. But it seems probable that a point has been reached in the educational history of this country beyond which the efforts of school officials of various kinds in the cities must be redoubled in order to increase the school attendance beyond the present proportion to population. At this time the former opposition to the public school system is almost entirely a thing of the past. The efficiency of the public schools is nowhere questioned, and of themselves they attract all those who desire instruction excepting a comparatively small number who prefer private schools for reasons that do not concern the efficiency of the public school system.

The facilities for instruction and the means for providing the same are almost without exception reasonably ample, and it may be doubted whether any considerable number of children are kept from school because of lack of accommo-

[1] Prepared by Mr. James C. Boykin.

dation or of teaching force. With efficient, well-equipped schools, enjoying the favor of the communities in which they are, it is evident that all efforts whose object is the conversion of considerable classes of people to a belief in them have accomplished their aim and have become no longer necessary, since nearly all intelligent education-seekers have become patrons of the public schools.

But there remain a large number of persons in every city to whom school instruction offers no advantages that they can appreciate, and who, if left to themselves, would never see the inside of a schoolhouse.

It is toward this class that the efforts of school officials must be directed in future if they desire to increase the proportion of the population who attend school; and it must be remembered that such efforts must be exerted toward each individual, and not toward a class, and must be supplemented by such expensive and troublesome auxiliaries as compulsory laws, truant officers, and truant schools.

In fine, the time has passed for great gains in the proportion of enrollment to population in the cities, and in the future we may expect, instead, constant fluctuations, due to local rather than general causes, or even a downward tendency, since there is good ground for belief that the proportion of paupers, of the thriftless, and of the depraved increases in growing cities out of all proportion to the increase in population.

It is noteworthy that in the largest cities the failure of the schools to keep pace numerically with the population is especially noticeable. The following table exhibits the ratios necessary to bring out this fact so far as it relates to the sixteen cities whose population is over 200,000, they being arranged in the order of their size.

City.	Annual rate of increase of population.	Proportion of increase of public school enrollment during the year.	City.	Annual rate of increase of population.	Proportion of increase of public school enrollment during the year.
	Per cent.	*Per cent.*		*Per cent.*	*Per cent.*
New York, N. Y.	2.07	*a* 0.31	Cincinnati, Ohio	1.55	*a* 0.61
Chicago, Ill.	8.13	7.56	Cleveland, Ohio	4.93	3.10
Philadelphia, Pa.	2.13	*b* 1.57	Buffalo, N. Y.	5.22	5.48
Brooklyn, N. Y.	3.58	1.41	New Orleans, La.	1.14	*d* 0
St. Louis, Mo.	2.48	2.36	Pittsburg, Pa.	4.35	0.93
Boston, Mass.	2.12	*c* 1.20	Washington, D. C.	4.61	3.37
Baltimore, Md.	2.71	1.16	Detroit, Mich.	5.89	*a* 4.89
San Francisco, Cal.	2.51	4.43	Milwaukee, Wis.	5.84	5.27

a Increase from 1889-'90 to 1890-'91—the latest data at hand.
b Increase in "number belonging at the end of the year."
c Increase in "average number belonging."
d Decrease 0.43 per cent.

In only two of these cities, San Francisco and Buffalo, is the increase in school attendance as great as that in population, and in both cases there are evidences that the increased proportion is only temporary, being larger than usual in the year for which the figures are given. The increase in enrollment in Buffalo since 1880 has been irregular, being occasionally at a greater rate than the average increase of population, as in this year, but generally less, while the general tendency has been downward. In the ten years from 1880-'81 to 1890-'91 the population increased 64.80 per cent, while the school enrollment increased in the same time but 41.11 per cent.

In San Francisco, the increase of population from 1880 to 1890 was 27.80 per cent, and the enrollment increased in the corresponding period only 12.02 per cent. It appears in this case that the slow increase of the public schools is, in part at least, explainable by the rapid development of parochial, or church, schools since 1885. The sudden increase in favor of the public schools in 1892 is probably due to some action of the managers of the church schools by which the public schools were benefited.

Thus it appears that in all the great cities of the country the schools are losing ground.

The subject is one that demands the most serious attention.

AVERAGE ATTENDANCE.

All else being equal a decrease in enrollment may be expected to be followed by an increase in the average of regularity of attendance on the part of those children who are enrolled. It is always the least earnest pupils and the children of the least intelligent parents who are last to seek admission to the schools, and the nonenrollment of this class tends to raise the average of attendance, since it is to them that low averages are principally due. The inference from the preceding paragraphs is that proportionally fewer of such children have sought admission to the schools, and one is therefore prepared to find a better showing in the ratio of average daily attendance to enrollment. This proportion for the entire country was 71.2 per cent in 1891–'92 as against 70.7 per cent in the previous year; the rate of actual increase during the year for this item has been 5.09 per cent, but even this is below the rate of increase of total population.

In instituting a comparison between the several divisions it is seen that the attendance is least regular in the cities of the North Atlantic Division. This may excite some surprise in the minds of those familiar with the general excellence of the schools in that section. But it will be remembered that in no other section are the compulsory laws more generally enforced than there.

These laws require attendance of all children between certain ages for a part of the school year; and in their operation a class of children are brought into school for a limited time that would not be enrolled at all in the absence of such laws. Required to attend against their will, they leave as soon as the legal period has expired, and in the meantime the agencies which brought them in must be constantly employed to keep them there. Their irregularity of attendance and their short stay in school reduce the average of the whole to a comparatively low point, but since whatever of instruction the irregular class receive is clear gain and would not be had under other circumstances, the low average of regularity that it entails is not a matter for regret, except that the period prescribed does not cover the entire school year. The new compulsory law of Ohio does provide for attendance during the entire term, and it will be interesting to observe whether the present high ratios of regularity will be maintained under its operation.

The explanation that low averages are caused by compulsory attendance is only a partial one, however, and can not be applied in all cases where low averages appear even in the North Atlantic Division. In Pennsylvania, for example, the average is noticeably low, and yet there is no compulsory attendance law on the statute books. The low percentage of that State is due to the conditions that exist in Philadelphia, which possesses nearly half the urban population of the State, and in which each child enrolled attends school on an average less than sixty days in every one hundred.

The high proportions in Georgia and South Carolina are undoubtedly due to some mode of recording statistics that differs from the methods in use elsewhere, and the apparent superiority in respect to regularity in the South Atlantic Division may be ascribed to that reason. The attendance in the North Central Division appears from the statistics to have reached a very satisfactory point, namely, 74 per cent for the whole division. Ohio, Minnesota, and Kansas show especially high ratios, being, with Maine, District of Columbia, and Kentucky, the only States (excluding Georgia and South Carolina) in which three-fourths of the pupils enrolled are in constant attendance.

LENGTH OF SCHOOL TERM.

In the length of the school term there has been a distinct loss this year, the average number of days of school having been reduced from 193.5 days to 191, and this, too, in the face of largely increased expenditures. The decrease has occurred principally in the older divisions where the schools are most firmly established, the North Atlantic Division showing a loss of 4.3 days, and the North Central a loss of 2.2 days. In the Western Division, too, the term has been reduced slightly, but both the Southern divisions show an increase, the South Atlantic of 4 days and the South Central 0.1.

It is significant that while the support of the public schools is more burdensome upon the people of the South for well-known reasons, that is the only section which reports a lengthened term. But this does not imply greater devotion to the schools in the South than in the North as it may appear at first sight. In the South the need of money for the conduct and equipment of the

schools has been a serious drawback since the inception of the system there, and in point of length of term the Southern cities, as well as States, have as a rule been behind the more favored localities, simply because of lack of funds to continue. The cry there has long been for "more months of school." On the contrary, in those sections where it is financially possible to maintain the schools continuously, if need be, numerous advocates of shorter daily sessions and shorter terms have arisen, and the grounds they take relate less to the economical advantages than to the supposed injury that school attendance inflicts upon the children.

Notwithstanding the widespread use of physical training in the schools, the improvements in the heating and ventilation of schoolhouses, and close attention to sanitary matters generally on the part of school authorities, it is claimed by many that a few hours a day for nine months in the year are as many as any child should be required to remain in school. Regardless of all the principles of arithmetic it is said, in effect, that more can be accomplished in seventy-two months than in eighty or eighty-eight; that better methods of teaching and the better health of the pupils that are expected to follow the reduction of school time will more than make good the difference, etc.

It is not mentioned why the better methods and the improvements in the curriculum often referred to in this connection could not be made with the longer term as well as the shorter one; nor has it been clearly proved, even if it be true that the health of school children is generally unsatisfactory, that an improvement would follow the partial cutting off of their school privileges. Nevertheless such arguments have had their effect upon the minds of many of the school boards, and a reduction in the school time of the country as a whole is the consequence.

The loss is more clearly seen in the item of "aggregate attendance," which shows that the whole number of days' instruction was less by 4,951,289 days than it would have been if the length of the school term had been as great as the year before. In other words, the loss to the sum total of instruction imparted has been greater because of the average loss of two days and a half than it would have been if there had been no schools whatever opened in the cities of either Maine, New Hampshire, Rhode Island, Delaware, Virginia, West Virginia, North Carolina, South Carolina, Georgia, Florida, Tennessee, Alabama, Mississippi, Texas, Arkansas, South Dakota, Nebraska, Kansas, or Colorado, or any of the Western States except California.

The rise and growth of the city school systems of the country are practically things of the last fifty years; and it is interesting to note what change has occurred in that period in the time a child was expected to devote to his school duties. The following figures are self-explanatory:

City.	In 1841-'42 or thereabouts.			In 1891-'92 or thereabouts.		
	Length of school term.[a]	Length of daily sessions.	Time given to recesses daily.	Length of school term.	Daily sessions.	Recesses.
New York, N. Y.	49 weeks	6 hours		202½ days.	5 hours	20 minutes.
Chicago, Ill.	48 weeks	6 hours		192 days.	5 hours	15 minutes
Philadelphia, Pa.	251½ days.	7 hours		201 days.	5 hours	10 minutes.
Brooklyn, N. Y.	11 months.			202 days.		
Boston, Mass.	224 days.	{5½ hours *b* {6 hours *c*	30 minutes.	200 days.	5 hours	20 minutes.
Baltimore, Md.	11 months.	{6 hours *b* {7 hours *c*	30 minutes.	203 days.	5 hours	30 minutes.
Cincinnati, Ohio	11 months.	7 hours.	30 minutes.	190 days.	5½ hours	15 minutes.
Cleveland, Ohio	43 weeks			190 days.	5 hours	15 minutes.
Buffalo, N. Y.	12 months.			195 days.		
Washington, D. C.	238 days.	{6 hours *b* {7 hours *c*	30 minutes.	180 days.	5 hours	15 minutes.
Detroit, Mich.	259 days.	6 hours		196 days.	5½ hours	20 minutes.

a The exact number of days can not be stated in all cases, because of the uncertainty as to the length of the week or the month mentioned in the original documents. It is presumed, however, that the calendar week or month was intended.

b In winter. *c* In summer.

The facts shown for these cities are indicative of the practices generally prevailing at the two periods named. It was formerly the custom to keep the schools open nearly the entire year. Vacations of four weeks, either consecutive in the summer, or one week at the end of each of the four quarters, was as much time as was considered necessary for rest for pupils or teachers. Holidays were few,

Independence Day, Thanksgiving, Christmas, and New Year's Day usually comprising the entire list. The day's work began at 8 or 9 in the morning and continued till midday; the afternoon session opened at 2 o'clock and continued till 5, there being usually a short recess in each session. On Saturdays the morning session was held, but the afternoon was always a holiday, and in a few places the schools were closed Wednesday afternoons also.

There have been many departures from these practices, the constant tendency being toward a reduction of the time. First, the Saturday morning session was discontinued; then the summer vacations were lengthened; the morning sessions were shortened by deferring the opening of school till 9 o'clock; the afternoon sessions were curtailed; new holidays were introduced; provisions were made for a single session on stormy days, and for closing the schools to allow teachers to visit other schools, and in some instances to give them opportunity to attend teachers' institutes.

A liberal estimate would give 950 hours as the actual time devoted to school work in a year under the present conditions, while 1,320 hours would be a moderate statement of the annual school term as it was at the beginning of the public school system. The boy of to-day therefore must attend school 11.1 years in order to receive as much instruction, quantitatively, as the boy of fifty years ago received in 8 years; and the plain arithmetical conclusion is that if the length of session and term were restored to the old figures nearly the entire elementary and high-school course could be completed in the time now required for the elementary course alone. This may not be true to its full extent, but that it approaches the truth can not be denied. In the countries of Continental Europe the sessions and terms have not been subjected to the steady reduction that our schools have suffered; it is scarcely necessary to look further than this for the explanation for the greater amount of work accomplished in a given number of years in the German and French than in the American schools.

During the fifty-year period mentioned in the foregoing paragraphs the changes in the course of study have been equally as constant as the changes in school term, but in this respect the change has been in the other direction, the tendency being toward the addition of new subjects. Music, drawing, physiology and hygiene, elementary science, cooking, sewing, carpentry, paper folding, modeling, all find places in the elementary course of to-day, and none of them was to be found among the studies pursued a half century ago.

The improvement in the preparation of teachers, the increased care which the greater supply has made possible in the selection of new appointees, and the better equipment of the schools in respect to material appliances, have improved the average character of the instruction Whether these improvements have been sufficient to compensate for the lessened time and the increased requirements is a proper subject for investigation.

SUPERVISION.

Few realize to what an extent the business of supervion has grown in this country within the last few years. In the year just passed the number of supervising officials in the cities reached 2,724, an increase over 1890-'91 of 261, or 10.6 per cent, a larger gain than in any other item. There is now an average of one supervisor to every 20.2 teachers, against one to every 21.3 last year; if the supervisors were equally distributed among the cities, each would have six.

The last decade of years has been unusually fruitful in the establishment of normal schools; other agencies for the improvement of the teaching force have multiplied to a wonderful degree; and greater care has been possible in the selection of teachers than ever before. But notwithstanding all this the number of persons employed to oversee them at their work has increased in a still greater ratio.

A casual glance at the meager number of superintendents and assistant superintendents whose names appear in the printed reports ordinarily conveys the impression that the amount of supervision performed is limited. In fact comparisons are frequently made between cities on the basis of only the officers who are legally and specifically styled superintendents and assistant superintendents; and on that basis, complaint is sometimes made that there is still a dearth of supervision, because there are only one or two superintendents in each city. But the supposition that these are the only supervising officials is erroneous, for under this head must be placed all those who do not actually and regularly teach, but whose duty it is to observe and direct the work, either generally or in special lines, of those upon whom the burden of instructing the pupils really falls. The category includes not only superintendents, assistant superintendents,

supervisors, and inspectors specifically so called, but also directors, supervisors, or special teachers of drawing, writing, singing, physical culture, science, sewing, kindergarten, primary methods, reading, elocution, manual training, slöjd, and cooking, and generally principals, or masters, heads of departments, and "floor principals." Of course no single city can boast of all the officials named, but, so far as the directors of special branches are concerned, the arguments in favor of one apply equally to all, and if the system is right on general principles, no school is properly equipped that does not get the benefit of the whole list.

The reason always assigned for the employment of a special teacher is that many of the regular teachers can not teach that branch effectively, and special assistance and direction is required to enable them to properly present their instruction. New subjects were originally the only ones which were supposed to require special instructors; but writing, drawing, and music are no longer new subjects, and it can only be said in favor of them now that under special supervision the pupils receive better instruction because of the greater attention to those particular branches. By far the greater number of specialists employed are for the three branches named, while, strangely enough, the much more important subjects of arithmetic, language, spelling, geography, etc., must fare as best they may with the "regular" teacher under the guidance of the "regular" supervisors.

When the number of these officials of all kinds is taken into account it will be seen that the work of supervision is not so sadly neglected after all. On the contrary, the reports of superintendents themselves have in a few instances contained recommendations looking toward a reduction of the supervising force.

Superintendent W. H. Maxwell, of Brooklyn, has given close attention to the subject of supervision generally, and his utterances in regard thereto are marked with clearness and vigor. In his report for 1891 he said:

"Principals and heads of departments do not teach classes. They are supposed to spend their whole time in supervision. There is one supervisor who does not teach for every eleven classes. In my judgment the number of non-teaching supervisors is unnecessarily large. The excessive development of supervision has resulted in several clearly defined evils in our schools:

"First, it has withdrawn from the work of class teaching many of our best teachers, and has thus lessened the efficiency of the teaching force as a whole.

"Second, it has created the feeling that office work and making out examination questions are more honorable than the active work of teaching. If teachers are to have a due moral influence on their pupils their office should be held in the highest honor.

"Third, the struggle for the prizes that are held up before the eyes of our teachers in the shape of head of department places, involving as they do, in most cases, considerably less work and considerably better pay, has resulted in much unseemly wire-pulling and intrigue, an evil always to be deprecated in the administration of a public school system.

"Fourth, the multiplication of superfluous heads of departments has resulted in division of responsibility in school management, in petty jealousy, and in much harmful interference with the work of class teachers.

"Fifth, the unnecessary increase in the number of heads of departments has led to much of the excessive examination of pupils, with its attendant evils of cramming and nervous prostration, that, though now much less than in former years, still hurts our school work.

"Sixth, the cost of this supervision, not merely in the salaries of heads of departments but in the fitting up of elaborate offices with expensive furniture, is withdrawing each year a vast amount of money that is sadly needed for necessary work and material.

"A close estimate would show that not less than $30,000 per annum is expended on superfluous heads of departments. Surely a better use might be found for this money."

From such facts as are here set forth, it appears that in some places general supervision has been carried to too great an extreme, and the only question that remains to be settled is where to draw the line. It is generally conceded that the principal of every large building, or of a group of buildings, should be in every sense a supervisor; that he should devote a great part of his time to the regulation of the affairs of the school as a whole rather than to the instruction of a single class. That he should with the aid of an assistant have especial charge of the highest class, or of some especial subject or subjects studied by them, is not incompatible with this view, but on the contrary is desirable, both because the principal should be a teacher as well as a supervisor and should

therefore keep in touch with the actual business of teaching no less than with the duties of supervision, and because the pupils should not be deprived wholly of the benefits of direct contact with the strongest teacher, presumably, of the school.

Above the principal there should of course be the superintendent, whose business relates in a small degree to the details of school instruction and discipline but largely to the general direction of the entire system as a whole. It is evident that the number of superintendents and assistant superintendents required to give unity and harmony to the school system will be reduced to a minimum, provided the principals are of the right kind and act in hearty coöperation with each other and with the superintendent. The idea of a graded line of supervising officers, ranking one above the other in military fashion, is fast disappearing, and will soon take its place with other discarded pedagogical theories, such as rigid annual classification, strict adherence to percented examinations for promotions, and all those other appendages and devices conjured up when the system was supposed to be the single feature which it was important to perfect.

But there is little prospect of a decline in the idea of specialization now represented by the system of special supervision. The results accomplished under it are so far superior to what had been done without it that a further extension seems inevitable. It is like going to another world to leave an alleged musical exercise in a school whose teacher has had little musical training and less talent, and who attempts to teach what she herself does not know, with no other guide than the "course of study" and "handbook"—and then to pass to a school into which a skilled musician has infused a liberal share of his own enthusiasm and devotion to the art. Such differences as appear under these opposite conditions are the strongest arguments for specialization. It is altogether fitting and proper that if a subject is to be taught at all it should be placed under the most favorable conditions, and specializing the work of all teachers, at least in the higher grades, seems to be the most probable outcome of the educational experiences and experiments of the last few years.

The strongest argument in favor of conservatism in this matter has been the greater moral influence over her class that a teacher has who conducts all their school exercises throughout a whole year. But it is doubtful whether, under the present circumstances, the argument still holds good. The basis of the influence of the teacher upon the child lies in the fact that she is to a certain extent the embodiment of his ideal of knowledge and goodness. But can he hold her and her attainments in that same high regard when he observes that a supervisor of drawing must come in to aid her to teach one thing; a supervisor of penmanship is necessary for another; a supervisor of physical culture furnishes the list of exercises for gymnastics and instructs her how to direct them; a supervisor of music is as far superior to the teacher as she is to the pupil; the "floor principal" directs how she shall punish bad little Johnny Green; the principal frequently comes in to show her how to conduct a lesson in language or geography; the assistant superintendent and the superintendent occasionally come around with "aid and direction," and the school trustee does likewise? In the end the pupil, by degrees and unconsciously, perhaps, is very liable to arrive at the conclusion that "that teacher is not much of anybody after all, for all these other people have to come in and tell her what to do"—a remark which, by the way, was recently made by a sturdy little fellow of 12.

It is probable, therefore, that the department system, with which experiments are now being made in some localities, will gain favor as a means of presenting instruction by specialists, and at the same time of avoiding the evils of too much supervision. And there is little to be feared from any loss of moral influence in the transition from the present methods to an arrangement by which the pupil will remain under the same teachers during the entire time of his attendance in the higher grades, especially as each of those teachers will presumably know more of his or her particular branch than any of the superior officers, though their attainments may be broader and more general in their character.

NUMBER OF TEACHERS.

The number of teachers has increased from 52,431 to 55,057, maintaining nearly the same ratio of increase as the average attendance of pupils, so that the number of pupils to each teacher for all the cities is about the same as in 1890-'91, namely, 36. In individual States the averages vary from 26 in South Dakota to 40.2 in Virginia, 40.9 in Mississippi, and 49.2 (which is probably erroneous) in Georgia. Between single cities the variation is of course still greater,

while in individual cases there are extremes which are abnormal. For example, in Brooklyn there were 389 classes in each of which over 60 pupils were registered at one time. "Of these classes 259 had registers of between 60 and 70; 60 classes had registers between 70 and 80; 17 classes had registers between 80 and 90; 12 classes had registers between 90 and 100; 9 classes had registers between 100 and 110; 19 classes had registers between 110 and 120; 10 classes had registers between 120 and 130; 2 classes had registers between 130 and 140, and 1 class had a register of over 140."

Brooklyn is not alone in this respect, for a similar if not equally bad state of affairs may be found in other great cities, certainly in all in which district lines are rigidly observed, and all applicants are admitted without regard to the size of existing classes.

Supt. Maxwell, of Brooklyn, discussed the subject thus in his report for 1891: "A table of averages can give no adequate idea of the extent to which crowding in the lowest primary grade is tolerated. In some localities there is plenty of room; the class rooms are not crowded. In nearly all the newer sections of the city, however, the crowding is appalling. * * *

"In most of these very large classes there are half-day sessions, *i. e.*, some of the pupils attend only in the forenoon; the others only in the afternoon. But this crude device is really of very little assistance. No teacher, it matters not how vigorous or how skillful she may be, can teach properly more than sixty children. Not more than that number may be present at each session; but can any living being, within five hours a day, give to each one of over a hundred children that care and attention which at the opening more than at any other period of school life proper teaching demands? The first introduction to school life, on which so much depends for giving the right bent to the child's mind, ought to be pleasant, encouraging, and healthful; the opposite is the case—a vitiated atmosphere and an overworked teacher. The child's first school work should be full of variety and unexpected delights: we give him instead a dull routine, enforced idleness, and unnatural restraint.

"The system has not even the poor defense of necessity. It can not be claimed that it is necessary, unless it can be shown that in this way a larger number of children receive the benefits of an elementary education. This can not be done. One fact alone is sufficient to show that exactly the contrary is the case: The average number of children promoted from the seventh primary classes[1] each term is only 50 per cent. The average number of children promoted from the other grades is about 80 per cent of the register. But here, again, the average does not tell the whole truth. From these very large classes in the crowded schools, only about 30 per cent of the pupils are promoted.

"Could anything tell the dreadful story more plainly? As clearly as words could express it, these figures proclaim the truth. The teachers of the seventh primary classes[1] do not and can not teach any but a small proportion of these crowds of children. They teach those whom it is possible to prepare for promotion: the remainder, by far the larger number, are left to a large extent untaught. The energy that should be wholly given to teaching is dissipated in the effort to maintain order among the untaught, so that even those who are under instruction do not receive the advantages to which they are entitled. In other words, while out of a class of 60 a skillful teacher will easily prepare 50 for promotion, the same teacher, out of a class of 100, is not able, even with a much greater exertion, to prepare more than 30 or 35 for promotion. The untaught remain one, two, in some cases three terms in the grade before their turn to receive instruction arrives. After they have suffered physically through close confinement in a vitiated atmosphere; after they have suffered intellectually through the suppression of natural activity; after they have suffered morally through lack of exercise of the will, they are at last put on their passage upward through our schools. Fewer children are taught, and the quality of the teaching is seriously deteriorated by reason of overcrowded classes."

SEX OF TEACHERS.

It is a matter of common observation that the proportion of men in the teaching force has been growing less for a long time. The decrease from 7.20 per cent to 7.16 per cent during the last year has been slight, but sufficient to show that the tendency is still in the same direction. The number of male teachers increased 4 39 per cent, while the females increased 5.27 per cent.

Fifty years ago by far the greater number of teachers were men, and it has been but a few years since the employment of men as assistants in elementary schools was quite general; now it is the exception to find more than one man in

[1] That is, those of the lowest primary grade.—ED.

any one building, the assistants' positions being almost wholly monopolized by women.

In some places they have done even better, and have captured the principalships as well as the minor positions. In Wilmington, Del., for instance, there are 193 teachers, of whom only 5 are males, and they are all employed in the high school. A similar condition appears in Minneapolis, Minn., where all the 605 teachers are women, excepting 4 principals of high schools, 6 special teachers and 6 instructors of manual training. Substantially the same thing is true of several other cities, most of them being located in the West.

The change which resulted in this condition of affairs was brought about in consequence of the conviction that women are naturally better fitted than men to be teachers of young children, and also by the lower price at which women may be employed.

The latter was at first the principal reason for the initiation of this change, for it was begun at the instance of Horace Mann, Henry Barnard, and their contemporaries, when the public-school system was in its infancy. Money was scarce and every device that could be thought of was utilized to increase the number of schools and the number of people reached by them. But the change has gone much further than was ever intended or dreamed of by the original advocates of the employment of women, and further than the general sentiment of school men now approves. It has had many consequences that were not foreseen and which are difficult to overcome. The business of school teaching is coming to be considered a woman's business, and therefore, offers less attraction to young men than formerly, especially in the subordinate positions, where the low salaries also operate to repel them. The appointment of principals, too, presents new difficulties. The assistants' positions were formerly the training schools of principals, and from them it was always easy to select a man to fill any vacancy; but now it becomes necessary either to employ a new and untried college graduate, to import a rustic schoolmaster, or to transfer a high-school assistant. The first two sources of supply are open to the objection that there is too much uncertainty about the men of whose fitness for the position so little can be known, while the third expedient invariably weakens the faculty of the high school. With the source of supply so curtailed it is not surprising that in many cases women have been promoted from subordinate positions and made principals because no man was available about whom enough was known to justify the belief that he could fill the place better. The tendency thus gains force as it proceeds by constantly making it more and more difficult to secure good material, and there is danger that the increasing femininity of the schools, if such a term is permissible, may be productive of serious results. The already noticeable decrease in the proportion of boys in the higher grades is ascribed by many to this cause, and with some show of plausibility.

The subject is often canvassed in school reports. In many instances the employment of women principals is defended stoutly, a fact that is not surprising in view of the conditions which practically shut out men from all school experience as subordinates. But on the contrary, there are indications that the tendency of the last half century will soon be checked, for from some of the most influential educational centers in the country there has come a demand for "more men" that must soon make itself felt.

Supt. Aaron Gove, of Denver, Colo., has this to say of the matter in his report for 1891-92:

"One of the most desirable reforms in the administration of the American common school at the present day is that whereby more men may be employed as teachers. Not that a man is a better teacher than a woman. This is not true. But there are elements in the teaching profession which belong to sex, and the elements proper to both sexes are needed in training and character making, the main work of the school. A complete course of twelve years can be established only by an equal allotment of teachers from each sex. I would year by year alternately place the pupil under the companionship of, first, a man; second, a woman, and so on, from the first to the twelfth grade. In the present condition of society and of the financial world, this is impossible. But the change will come, and improvement will follow in the increase of the number of men teachers."

In Philadelphia, Pa., active steps have been made towards increasing the masculine element in the teaching force by the establishment of the "School of Pedagogy" for men, and the unanimous adoption of a rule that in future male teachers will be appointed for the two highest grades of the boys' grammar schools.

one-half of the pupils of our schools are girls, and that therefore it must necessarily follow that those whose duty it is to govern the schools should not consist of men only, but that a fair number of women ought to be appointed to take care of the needs of the women teachers as well as the girl pupils. If this argument has any value whatever, if there is any good reason to have women on our board because there are female teachers and girls in our schools, the argument will also hold good that we should have a sufficient number of male teachers because about one-half of our pupils are boys. Whenever a family has lost the father while the children of the family are still of that age during which they need guidance on the part of the parents, it will show, with only very rare exceptions to note, that the mother alone was not fully able to cope with the problem before her, and that the boys and girls in after life feel the lack of training by the strong hand of a man. It will necessarily follow that in our schools where our children pass a large part of their time the lack of masculine element among the teachers must show as well. A man (if he is the right kind of a person, and if not he has no place there) will inspire the children with more respect, after they have advanced to a certain age, than a woman, and they therefore will be more ready to listen to the teachings of the man and pursue their studies more diligently than if they are in the hands of a woman.

"It can undoubtedly be shown that some women are fully as able as men to inspire the children and have their respect to as full an extent, but if we look at these women we will always find in their character and their make-up some very prominent traits of the masculine character. I believe it will be one of the duties of the board to bring about some system by which our young men, who come to us with a college and university training, or who come as graduates of teachers' seminaries, are not turned away as has been done in the past, simply because the sentiment is against them and we have been accustomed to see women only in our public schools. At the present time we have hardly any male teachers in our primary and grammar grades and only a small number of male principals, our high schools only showing a fair percentage of the male sex among our teachers. At the end of our school year the official list shows the total number of teachers employed to be 3,001. Of these 190 are men (of these 190, 68 are employed in the high schools, 26 are teachers of special branches, and 94 are teachers and principals in our primary and grammar grades), while 2,811 are women. These figures, which are taken from the official records, ought to be sufficient to show that I am right in asking the appointment of more male teachers."

SCHOOL BUILDINGS.

The number of school buildings shows an increase over 1890-'91 of 303, or 4.67 per cent, while the number of sittings is greater by 116,098, or 4.96 per cent, than last year. This indicates a tendency to erect larger buildings.

There is no uniform policy in regard to the size or arrangement of buildings, and the circumstances of each particular case almost invariably determine the character of the structure. In the smaller cities two stories with eight rooms is the size most commonly found, and the number expressed in the "average size of buildings" *i. e.*, 370, expresses with greater correctness than averages usually do the number of pupils that may be accommodated in a typical building of this, the commonest kind.

In the great cities, however, the compact population and the high cost of land have led to the erection of immense edifices, each capable of accommodating as many pupils as are found in the entire school systems of half the cities of the country.

In New York City, of the eight new buildings in progress of erection one will have 1,736 sittings, another 1,848, another 2,016, still another 2,352, and two others will accommodate 2,520 pupils each. But even these are not the largest in the city. Grammar school No. 90, erected in 1890, contains 2,633 sittings, and another new building was furnished in 1891 with 2,722 sittings. Each of these buildings is four stories high, and of course does not leave much of the lot for a playground. The first cost of one of them would entirely support the schools of the average city of 25,000 inhabitants for four years. Grammar School No. 90 cost $245,000, in addition to the value of the lot, which was $30,000, a very moderate price for a school site in New York, for an examination of the list shows one valued at $135,000, another at $147,000, another at $157,000, and finally, one at $165,000. Fifty sites are worth $50,000 or more.

As New York at this time represents the maximum of urban growth and of density of population, so its buildings represent the maximum size in school-

house construction in this country and with probably not more than two exceptions in the world.

In London may be found the largest buildings ever erected at one time in Europe for public elementary schools, pure and simple, but the greatest of them all, the "Hugh Myddelton," recently completed, accommodates only 2,150, and cost £62,000, or about $310,000. Of this, £20,634 were for the site, so that the New York structure exceeds it both in value and capacity. Only one other London "board school" accommodates as many as 2,000 pupils. Brooklyn, as well as New York, far surpasses this record.

The famous Jews' Free School, in London, a privately endowed institution receiving Government grants, is one of the exceptions mentioned above as being more capacious than any building in this country. In the words of one of those in authority in the school: "It having become evident, in 1863, that the buildings were no longer adapted to the demands, new plans were formed, and in March, 1884, the old buildings were demolished, and on their site a magnificent set of class rooms, surrounding a great central hall, was erected at a cost of £25,000. By this means the school was rendered capable of accommodating 2,250 boys and 1,250 girls, and in a very short time those numbers of children were entered on the school registers." This may, or may not, mean that the "set of class rooms" and the "great hall" are all under a single roof; but whether this is the case or not, there remains the fact that all that army of children form a single school under the control of a single head master, and though the building may not be more notable in size than in value, the school must be ranked as one of the most numerously attended in the world.

But there is another school which surpasses this in size, though its growth to its enormous proportions was due to motives of economy rather than to a policy favoring large schools. The school is in Mülhausen, Alsace, and is thus described in Dr. L. R. Klemm's book on European Schools: "I found a unicum of a school here, such as I hope never again to see—a school containing no less than sixty-two class rooms, several offices, and the rector's dwelling, all in a conglomerate of buildings rickety and shabby. The pupils on the third floor must wait till the other floors are empty before they can be dismissed. The whole building is one dangerous mantrap. In case of fire thousands of children's lives would be in danger. This school is a blot upon the fair reputation of the city of Mülhausen."

It is said that this school is several centuries old; its growth has been provided for by repeated additions to the original structure, the idea being each time to save the cost of one wall by tacking on a new wing to the old building instead of establishing a new and separate school, which would necessitate four new walls instead of three; the pupils are seated upon benches, each of which holds six or eight children; there are twelve benches in each room, and the whole number of children in the school is not less than 4,464.

It has never been the policy of the school officials of the second city of the Union, Chicago, to erect such monster buildings as those described; the largest one in use, the Newberry, accommodates 1,320 pupils. At the present time most of the buildings erected in the populous districts of the city have 16 rooms and an assembly hall which can be converted into 2 class rooms, if necessity demands it. These buildings are of three stories with 6 rooms on each of the two lower floors and 4 rooms and the assembly hall in the third story. The seating capacity of each is about 864 in addition to the hall.

The most striking feature of the Philadelphia schoolhouses is that the class rooms are separated from each other only by movable partitions, which permit of the ready conversion of a series of rooms into a single long hall for general exercises. There seems to be no standard size or plan for the buildings in this city, and those recently erected contain 10, 12, 15, 18, or 21 rooms or divisions, apparently according to the existing needs of the particular locality in which the building is situated. The James Logan school, which seems to be one of the largest if not the largest building in the city, has 24 rooms on three stories, and had 1,663 pupils belonging at the beginning of the year.

Brooklyn is like New York in its mammoth buildings, there being a half dozen or more which accommodate over 2,000 pupils each, and several others whose capacity is between 1,500 and 2,000. The largest of them all, however, does not quite reach the 2,500 mark.

The largest buildings in St Louis accommodate from 1,200 to 1,500 persons, and the present policy of the board, as indicated by the character of the houses erected since 1885, favors buildings of not more than twelve rooms, accommodating about 700 pupils.

In Boston, the plan of school organization differs from that of the cities outside of New England, in that primary schools are not conducted in the same buildings with grammar schools. The grammar school, embracing six years of the course, forms the center pedagogically, and if possible geographically, of the school district. Around it the primary schools, in which the first three years' work is done, are placed in the best locations available for the convenience of the pupils. The buildings used in the pursuit of this plan are small as compared with those in the cities mentioned above, the most numerously attended having but 1,000 pupils; all the others with one exception have less than 800. The new Thomas N. Hart building, which is considered one of the best in the city, has 13 class rooms and an assembly hall, arranged in three stories, there being 5 rooms on the first floor, 6 on the second, and 2 rooms and the hall on the third.

In Baltimore, Md., there are but two elementary school buildings that are valued at as much as $35,000. The officials complain that the appropriations are insufficient to construct buildings large enough to provide for reasonable growth of the schools; and that a model school building, embodying the best features of the older buildings and omitting their defects, is greatly needed. None of the buildings erected up to this time are provided with assembly halls.

In San Francisco, Cincinnati, and Cleveland the buildings, like those of Chicago, vary in capacity from 500 to 1,300, the majority having accommodations for less than a thousand. In Cleveland, however, two or three have nearly 1,500 sittings.

The ten American cities mentioned in the foregoing paragraphs are the most populous in the country, and while their plans and methods may not be the ideal ones, they undoubtedly represent in their different types the conditions which may be naturally expected of all other cities when time and the remarkable tendency of the American people to congregate in cities has brought them up to the size of the great cities named. Their schools, therefore, in this sense may be said to be the resulting types of the half century's development of the American public school, and as such their features are worthy of especial study.

Among the smaller cities, the buildings of Denver, Colo., whose population is slightly over 100,000, are most frequently praised. Uniformly two stories high, of not more than 12 rooms, excepting the high school, with ample light, air, and floor space for each pupil, satisfactory apparatus for heat and ventilation, good arrangement of rooms and stairways, they have served as models for many of the best buildings of other cities. It may be well to state, however, that in designing them the architect was evidently not hampered with a stringency in the money supply, such as frequently or generally exists in cities of like size when a new schoolhouse is desired. To illustrate: The high school building was erected upon land donated by the General Government, and has cost $354,195.41; the estimated value of the site is $414,000, making the entire value of the property considerably over three-quarters of a million dollars. The new Swansea building cost $78,053; the Corona, $87,901, and the Wyman, $94,570. Compare the value of the Baltimore buildings with these figures, and the cause for the dissatisfaction of the officials of that city may be better understood.

NUMBER OF SITTINGS.

The accommodations for pupils as compared with the number in average daily attendance are somewhat less ample than in the last year. In 1890–'91 there were 136.7 seats for every 100 in actual attendance, while there were 136 during the year just past. The average attendance increased 5.09 per cent, while the number of sittings increased 4.96 per cent. The difference is very slight, and would not possess any significance but for the fact that it is one of many statistical indications that 1891–'92 was unfavorable for school work.

It would probably be well to repeat that this comparison of sittings with average attendance is not intended to show the actual degree of sufficiency of accommodations in any individual instance, but merely as a means of comparison between localities and dates.

The sufficiency or insufficiency of school accommodations in a quantitative sense is a matter which it is very difficult if not impossible to determine statistically. It is certainly not necessary that there should in any case be as many seats as there are pupils enrolled, for not all of them are in attendance the year around. Nor is the average attendance the proper measure of the number of seats needed, for a temporary absence of a pupil or pupils can not be made the occasion for the shifting of the seating arrangements without serious confusion

and inconvenience. There must, therefore, be more seats than there are pupils actually present. If it were possible to get a satisfactory and uniform definition of the "average number belonging," either that quantity or the "greatest number belonging at any one time" would be the better criterion by which to judge.

But even that would be exceedingly defective, for if the seats were as many as the greatest number belonging that would not necessarily indicate that there were enough, because of the impossibility of so locating buildings and accommodations as to precisely meet the necessities of the school population.

The reasons for this difficulty are stated by Supt. W. E. Robinson, of Detroit, Mich., to be "the rapid growth in the population in some of the newer portions of the city, the floating population in certain other parts, and the variation in the numbers promoted half-yearly from grade to grade and class to class."

In his characteristic vein, Supt. A. P. Marble, of Worcester, Mass., says: "The reason for this excess is apparent when we consider that the pupils can not always be sent to the houses where the extra seats are; for example, the seats in a suburban school can not be made to accommodate pupils in the high school any more than the vacant seats in one train of cars will accommodate the extra passengers in another train."

The greatest trouble experienced in the matter of providing accommodations seems to be the difficulty in persuading those who hold the purse strings to erect buildings in advance of present needs. The steady growth of our cities and schools is a matter which does not admit of doubt, but nothing seems harder for a city councilman to understand than the necessity for going to the expense of building a house for 800 children that were not in school last year. Of course when the next year has rolled around and the 800 new children have come in, he will see that it would be a good thing to have another house rather than have the children sit on the edge of the teacher's platforms and on the radiators, and then he is willing to appropriate the money for a new building to be ready for the children on the perches by the beginning of the next year. But by that time 800 or more other new children have arrived, and the same process is repeated. In this way and for this reason a great many, if not a majority, of the cities of the country are about a year behind in the erection of buildings.

There is no disposition on the part of the public officers of any city to cripple the schools or to withhold the funds necessary for their proper support. But the demands upon every city's treasury are many, and the aggregate of the estimates of the several departments invariably exceeds the annual revenue. Then in the general scaling down which always follows, woe be unto the schoolhouse asked for by the board of education if the superintendent has indiscreetly hinted at "building for the future" in his recommendation! The reply is, "We can take care of the future when it comes. There are expenditures now needed that will take all our money without providing for the demands concerning the next generation."

To this is due the most of the complaint concerning insufficient accommodations. There are, to be sure, many instances of neglect, more or less flagrant, of the just and reasonable demands of the schools in the matter of buildings, but the neglect has been of short duration, and after a few years of inaction the authorities have always awakened suddenly to a sense of their duty, and have gone to work with feverish haste to make up lost ground.

SCHOOL PROPERTY.

The value of school property shows an increase over last year of $9,100,729, or 4.93 per cent. This increase has been larger proportionately than that in the number of buildings, which indicates a greater average value per building—a result which naturally follows the increased size of buildings noted in a previous paragraph. But the increase in value is less in proportion than the increase in number of sittings, which merely adds another proof to the well-known experience that within certain limits the cost of building does not increase in direct ratio with the capacity of the structure. For example, a three-story house costs much less than 50 per cent more than one of two stories, because the cost for foundation and roof is practically the same in both cases.

The value of school property in this connection must be understood to mean the value of property owned by the public authorities and used for school purposes. Furniture, apparatus, school libraries, etc., are included as well as real property, but lands held for purposes of revenue and rented property are not.

Some of the Western cities, notably St. Louis and Chicago, are particularly

fortunate in the possession of valuable property from the rental of which a considerable portion of their revenue is derived. Chicago received $225,634 from this source in 1891-92, and St. Louis received $54,235.

The possession of this property is a result of the long-established policy of the United States Government to set aside two sections for school purposes out of every township newly opened for settlement. Chicago's school land is situated partly in the heart of the city, and has increased enormously in value, being worth now several millions.

The General Government has, in a few instances, given aid to city schools in other and more direct ways than in the reservation of school lands. For instance, the site of the Denver High School is a block which was donated by the United States; and the schools of Fort Smith, Ark., are supported mainly by the revenue from a gift of the National Government in the shape of an abandoned military reservation.

Rented property plays a very small part in the school economy of our cities, and its use is always a makeshift to serve till arrangements can be made for the occupation of quarters owned by the cities themselves. It is almost impossible to rent buildings suitable for school purposes. To meet the wants of a school, the building must have been designed for a school. But private capital is rarely employed nowadays in the erection of schoolhouses, excepting, of course, for the church schools, and never for the purpose of renting them, as is frequently the case in nearly every other class of buildings. In case of emergency, therefore, in which the city's school property does not suffice for its needs, whatever is available must be taken, and that usually means an old hall, church, store, or even dwelling. It goes without saying that in light, heat, and ventilation such quarters are exceedingly defective, and their use is justified only by urgent necessity, and is continued no longer than is absolutely necessary.

It is the policy of most cities to erect their schoolhouses upon land owned by them in fee simple, but in a few instances the local customs make it generally impossible to secure lots in that way. Baltimore is the most conspicuous example of this, for in the city proper only about a half dozen of the school sites are owned in fee, while more than seventy are leased, and require a large annual payment of "ground rent." The policy of the board, however, in recent years at least, is to secure the ground in fee simple whenever it is possible.

EXPENDITURES.

Except in the number of supervising officers the greatest increase for the year is in the matter of expenditure. The cost of supervision and teaching was greater than last year by 6.33 per cent, and the total expenditure was greater by 6.36 per cent. The whole amount expended for schools by the 459 city systems was $60,555,120, a sum by no means niggardly, being equivalent to a contribution of $3.17 from every man, woman, and child in the population of those cities. For each pupil in average attendance, the average amount spent for all purposes was $30.58. Of this $17.86 were for instruction pure and simple, embracing only the cost of teaching and of the supervision of teaching. The remainder was for incidentals of various kinds, supplies, text-books, janitors' wages, repairs, furniture, and new buildings, and, in fact, everything for which money was spent during the year, except the single item of tuition. The repayment of loans and bonds are not and should not be included, for the obvious reason that misleading duplication would be caused thereby. For example: Cities frequently negotiate temporary loans in anticipation of expected receipts. Suppose that a city should borrow each month the money for the teachers' salaries in order to pay them promptly, repaying the loan every time a few days after. It is plain that only the money paid to the teachers was actually spent for the schools, yet if all the money disbursed were included, it would appear that the cost of the schools was just twice as much as it really was. All loans and bonds rest upon the same basis, and add to the actual cost of the schools only to the extent of the interest paid on them.

Since the expenditures increased during the year at a greater rate than any of the items of enrollment and attendance it naturally follows that the cost per capita is also greater. The expense for tuition per pupil in average attendance was greater by 21 cents than last year, and the expenditure for all purposes was 27 cents more. Every day that a city child went to school during the year, he cost on an average 16.02 cents; of this, 9.35 cents were for his direct instruction. Both these items are larger than in the previous year.

It is interesting to note that the purposes for some of this increased expense are brought out in the statistics. In the first place the great increase in the

number of supervising officers undoubtedly affects the cost of tuition to a considerable extent, and largely, if not entirely, accounts for the difference in its per capita cost.

In regard to expenditure other than that for tuition the increase is due to several circumstances. The public are more inclined to be liberal in money matters with the schools than ever before, because they very generally appreciate the work of the schools, and because they are more than at any previous period accustomed to associate generous expenditures with good schools. Therefore it has been possible to secure sums for furnishing the schools with improved sanitary arrangements, apparatus for instruction, and supplies of every kind, which a generation ago would have been considered by the authorities as useless extravagance and would have been promptly refused. Besides, certain new features of the schools have been the occasion of a great deal of expense not required in past years. Let us mention a few of them:

The free text-book system is growing in popularity, and its adoption by an increasing number of cities adds each year to the aggregate amount expended.

Physical training is becoming popular and demands more or less of apparatus of the lighter sort under any system, and in many cases complete gymnasiums have been fitted up at a considerable cost.

The modern and most approved methods of instruction, notably in the sciences, demand ample laboratory facilities. Geography, physics, chemistry, geology, etc., now require the expenditure of money for apparatus that the old-time text-book teacher never dreamed of the possibility of securing.

Manual training is constantly gaining ground, and wherever it is begun there must be shops for carpentry, forges, furnaces, and machines for iron-working, materials for sewing, and school kitchens for instruction in domestic economy, not to mention the colored paper, modeling clay, and other material required for the lower grades.

The kindergarten idea is rapidly spreading, and is attended with the purchase of the characteristic material required for the peculiar work, of course, but still more important, it frequently involves the provision of new and special furniture, musical instruments, and even new buildings.

Compulsory attendance laws are being diligently enforced in several States and the agencies necessary therefor are expensive and additional to the usual requirements of the schools. Truant officers and truant schools are necessities which have grown out of the new state of affairs, and must be maintained wherever an earnest effort is made to enforce the law.

Certain changes in matters of discipline and classification have caused new items to be added to the expense account of many cities. The total or partial abolishment of corporal punishment has been followed by the establishment of "schools for incorrigibles" in many instances, and "ungraded classes" for backward or for unusually bright pupils are maintained in some localities to avoid the evils of long intervals between classes. These schools are in the nature of "extras," and while their ultimate result is a saving of money by hastening the progress of the children, their immediate effect is an addition to the school budget.

All these features are among the developments of the last few years. They are not yet universal, or even general, but all are growing in favor, and each year sees the addition of one or more of them to a very respectable number of city systems. All are expensive in a greater or less degree, and so long as their extension continues, just so long may an annual increase be expected in the per capita as well as the absolute cost of city schools, unless indeed some unexpected calamity or some ill-advised movement should occur to hinder the present favorable progress of public education.

But in addition to these features in the nature of permanent improvements in the system, there has been one item of expenditure which has appeared in the accounts for 1891-'92, and is only temporary in its character, but which amounts to a goodly sum in the aggregate, because nearly all the cities report it, namely, preparation for the World's Columbian Exposition at Chicago. The expense attending the preparation and care of the exhibits varied from a few hundred dollars to several thousand. In addition to this and related to it was the celebration of Columbus Day, October 12, 1892, in honor of the discovery of America four centuries before. The occasion was commemorated, either by formal exercises or by processions, in probably every city in the country.

These two events entailed a great deal of extra work upon the teachers and pupils, and seriously interfered with the even tenor of school work for a considerable time. Though the ultimate results, especially of the World's Fair ex-

hibit, must necessarily be beneficial to American education, there can be no doubt that the immediate effects were by no means favorable. In fact, one of the potent reasons for the bad showing in the statistics of the year may be found in this.

TABLE 1.—*Summary of statistics of school systems of cities containing over 8,000 inhabitants, showing increase or decrease from the previous year.*

Total population:	
1890	18,088,348
1891	a19,094,594
Increase	1,006,246
Per cent of increase	5.56
Enrollment:	
1890–'91	2,667,042
1891–'92	2,780,800
Increase	113,758
Per cent of increase	4.27
Aggregate number of days' attendance of pupils:	
1890–'91	364,687,603.5
1891–'92	378,208,076.6
Increase	13,520,473.1
Per cent of increase	3.71
Average daily attendance:	
1890–'91	1,884,473.9
1891–'92	1,980,515.5
Increase	96,042.6
Per cent of increase	5.09
Average length (in days) of school term:	
1890–'91	193.5
1891–'92	191.0
Decrease	2.5
Enrollment in private schools (estimated):	
1890–'91	723,990
1891–'92	753,178
Increase	29,188
Per cent of increase	4.03
Number of supervising officers:	
1890–'91	2,463
1891–'92	2,724
Increase	261
Per cent of increase	10.60
Number of teachers:	
1890–'91	52,431
1891–'92	55,057
Increase	2,626
Per cent of increase	5.01

a The population of each city, with a few exceptions, being estimated upon the basis of the annual rate of increase from 1880 to 1890.

TABLE 1.—*Summary of statistics of school systems of cities containing over 8,000 inhabitants, showing increase or decrease from the previous year*—Continued.

Number of buildings:	
1890-'91	6,478
1891-'92	6,781
Increase	303
Per cent of increase	4.67
Number of sittings or seats:	
1890-'91	2,396,674
1891-'92	2,512,772
Increase	116,098
Per cent of increase	4.96
Value of school property:	
1890-'91	$184,507,058
1891-'92	193,607,787
Increase	9,100,729
Per cent of increase	4.93
Expenditure for teaching and supervision:	
1890-'91	$33,266,128
1891-'92	35,372,482
Increase	2,106,354
Per cent of increase	6.33
Expenditure for all purposes, excepting loans and bonds:	
1890-'91	$56,936,447
1891-'92	60,555,120
Increase	3,618,673
Per cent of increase	6.36

TABLE 2.—*Summary, by States, of population and school enrollment and attendance in cities containing over 8,000 inhabitants.*[1]

State.	Number of school systems.	Total population in 1891 (estimated).	Enrollment in public day schools.	Aggregate number of days' attendance of all pupils.	Average daily attendance.	Enrollment in private and parochial schools (estimated).

[1] In the preparation of this table omissions and deficiences in the returns of individual cities were supplied from the best sources available. If no accurate information could be had in any particular case, an estimate based upon the ratios developed in the other cities of the same State was used unless it appeared that the conditions were essentially different in the city for which precise data were lacking.

Blanks indicate that the number of cities which reported the item was not sufficient to justify an estimate to supply the deficiency.

TABLE 3.—*Summary by States of supervising officers, teachers, property, and expenditures of school systems of cities containing over 8,000 inhabitants.*[1]

State.	Number of supervising officers.	Number of teachers.			Number of buildings.	Number of seats or sittings for study.	Value of all public property used for school purposes.	Expenditure for supervision and teaching.	Expenditure for all purposes except loans and bonds.
		Male.	Female.	Total.

[1] In the preparation of this table omissions and deficiencies in the returns of individual cities were supplied from the best sources available. If no accurate information could be had in any particular case, an estimate based upon the ratios developed in the other cities of the same State was used unless it appeared that the conditions were essentially different in the city for which precise data were lacking.

Blanks indicate that the number of cities which reported the item was not sufficient to justify an estimate to supply the deficiency.

TABLE 4.—*Summary of statistics of public evening schools in cities of 8,000 or more inhabitants, 1891–'92.*

State.	Number of cities of over 8,000 inhabitants which support evening schools.	Number of such schools.	Number of teachers.			Number of pupils.			Average daily attendance.
			Male.	Female.	Total.	Male.	Female.	Total.

TABLE 5.—*Comparative statistics of school systems of cities containing over 8,000 inhabitants.*

City.	Ratio of total public and private school enrollment to total population.	Ratio of private school enrollment to total public and private school enrollment.	Ratio of public school enrollment to total population.	Ratio of average attendance to total enrollment (public schools).	Average number of days' attendance of each pupil enrolled.	Average length of school term.	Average number of pupils in attendance to each teacher.	Average number of teachers to each supervising officer.	Average number of seats for each 100 pupils in attendance.	Average number of seats or sittings to a building.	Value of school property per capita of—		Cost of tuition (*i. e.*, supervision and teaching) per capita of—		Average cost per day of tuition for one pupil.	Average daily expenditure per pupil for all purposes.	Total expenditure per capita of total population.
											Total population.	Average attendance of pupils	Total population.	Average attendance of pupils

CHAPTER XVIII.

SECONDARY SCHOOLS.

A.—Public high schools. B.—Academies, preparatory schools, private high schools, etc.

The great interest taken in the subject of education in secondary schools the past few years has been emphasized by the National Educational Association in the appointment of a special committee to consider the relation of the secondary schools to the colleges and universities.

The exact place of the secondary school has not been definitely determined, and the office of this committee, and the subcommittees appointed by it, was to investigate the whole subject of secondary instruction and present the results of their deliberations in a consolidated report. By this means it was expected to show what the relation of these schools to the colleges is, especially in regard to the studies to be pursued. In the reports of the Bureau of Education the attempt has been made to collect the most complete data possible from these schools and make all of it available for comparison and study. For three years the statistics have included the public high schools, as well as private institutions of secondary grade. The statistics of these two classes of institutions have been compared with each other as far as possible, and for the report of 1890–'91 special tables and diagrams were prepared to show the growth and the comparative increase of each class. Each year the figures given become more complete, and certain of the percentages may be regarded as virtually correct, although not all the schools are reported. This is specially true in regard to the studies pursued at these schools and about which, perhaps, the greatest interest centers at the present time. If we have complete reports from three-fourths of the schools, then the percentages of those reported in matters relating to studies pursued may be taken fairly to represent the other fourth not reported, and we may thus get the average condition of the schools throughout the country.

One of the difficult questions has been to eliminate the students of the elementary grade found in quite a number of these schools; it is believed that this has practically been done, and that the students given in the tables all properly belong to the secondary or preparatory school grade.

In the year 1889–'90, reports were received from 2,526 public high schools, with 9,120 teachers and 202,963 students. In 1890–'91, 2,773 schools reported, with 8,270 teachers and 211,598 students. This year (1891–'92), 3,035 schools are reported, with 9,564 teachers and 239,584 students.

Of the private academies, preparatory schools, and private high schools, there were reported in 1889–'90, 1,632 schools, with 7,209 teachers and 94,931 students. In 1890–'91, there were reported 1,773 schools, with 6,231 teachers and 98,400 students; while this year (1891–'92), the reports show 1,550 schools, with 7,093 teachers and 100,739 students.

The seeming discrepancy in some of these figures in both classes of schools comes from the imperfect classification of the students and teachers into elementary and secondary in cases where the enrollment of the school included pupils below the academic or high-school grade. But this matter is being gradually accommodated to the conditions of the various schools, and will doubtless soon be sufficiently exact for practical purposes. The relative changes in the number of students, the number pursuing certain studies, etc., can best be seen by comparing the data from these two classes of schools for a period of years.

SUMMARIES OF STATISTICS, 1891–'92.

I.—Public high schools.

The two following tables of summaries are arranged for comparing the two classes of schools, public and private, and each is arranged by geographical divisions and by States and Territories.* Table I gives the number of schools, instructors, and students in the public high schools.

Of the 3,035 schools reported in this table, 1,571 are in the North Central Division; 900 in the North Atlantic Division; 244 in the South Central Division; 189 in the South Atlantic Division; and 131 in the Western Division. Of the 9,564 instructors in these schools, 4,714 are in the North Central Division; 3,282 in the North Atlantic Division; 626 in the South Central Division; 528 in the South Atlantic Division, and 414 in the Western Division. Of the 239,556 public high-school students in the country, 117,261 are in the North Central Division; 85,628 in the North Atlantic Division; 13,720 in the South Central Division; 12,556 in the South Atlantic Division, and 10,391 in the Western Division. It is interesting to note that in every part of the country there has been a substantial increase in the number of students during the past year.

* In addition to the number of secondary students reported in the above tables there are of these students 4,647 in the public normal schools and 4,315 in the private normal schools; 1,951 in the manual training schools; 50,910 in the preparatory departments of higher institutions. These added to the number reported from the secondary schools would make a total of 402,118 students.

TABLE I.—*Summary of statistics of public high schools for 1891-'92.—Schools, instructors, and students.*

Additional tables and diagrams illustrating the status of secondary instruction.

Besides the general summaries given in the foregoing tables, several subsidiary tables and diagrams have been prepared to show more clearly the comparison between public and private secondary schools.

DIAGRAM 1.—*Comparison of public high schools and private academies, seminaries, etc. Number and percentage of schools, instructors, students, graduates, etc. 1891–'92.*

	Public high schools.	Private academies, etc.	Total.	Per cent of whole number.	
				Public schools.	Private schools.
Schools	3,035	1,550	4,585	66.17	33.83
Instructors	9,564	7,093	16,657	57.41	42.59
Students	239,556	100,739	340,295	70.39	29.61
Preparing for college:					
Classical course	15,233	15,995	31,228	48.78	51.22
Scientific course	16,532	9,291	26,823	61.63	38.37
In graduating class, both courses	9,246	5,229	14,475	63.87	36.13
Graduates	28,490	8,477	36,976	77.07	22.93

Diagram 1 shows the relation of both classes of schools as to their number, number of instructors, number of students, also number of students preparing for college in both courses, the number in the graduating class, and the number of graduates for the year. It is seen that, so far as reported, the public high schools are over 66 per cent of the whole number, and have over 57 per cent of the instructors and 70 per cent of the students, in each of these a slight gain over the past year. Of those preparing for college, in the classical course 48.78 per cent are in the public and 51.22 per cent in the private high schools, while in the scientific course the public high schools have 61.63 per cent and the private high schools 38.37 per cent. Of those preparing for college, in the graduating class both courses, almost 64 per cent are in the public schools. Of the total number of graduates 77 per cent are in the public high schools, leaving about 23 per cent in the private high schools.

The number and percentage of the students in both classes of schools preparing for college are given in diagram 2, Parts I and II, classified by geographical divisions and for both classical and scientific courses, showing the proportion of each to the whole number of students in the schools, and by comparison the relative number in each class of schools.

DIAGRAM 2, PART I.—*Number of students preparing for college and proportion to whole number of students in the schools.*

A.—PUBLIC HIGH SCHOOLS.

	Total number of students.	Number of students preparing for college.		Percentage.
		Classical course.	Scientific course.	
United States	239,556	15,233	16,532	6.33% / 6.9%
North Atlantic division	85,628	6,850	4,482	7.99% / 5.23%
South Atlantic division	12,556	991	340	7.88% / 2.70%
South Central division	13,720	1,324	683	9.65% / 4.97%
North Central division	117,289	5,501	9,959	4.77% / 8.49%
Western division	10,363	567	1,068	5.46% / 10.30%

Part I of the above diagram shows that over 12 per cent of the students reported in the public high schools are preparing for college, and they are almost equally divided between the classical and scientific courses. The larger percentage of students in the classical course in the public high schools is found in the North Atlantic, South Atlantic, and South Central Divisions, the largest proportion being in the South Central Division, while in the North Central and Western Divisions the numbers in the scientific course are almost double those in the classical course; that is, in public secondary schools the older-settled parts of the country show comparatively the

greater proportion of classical students and the newer portions the larger number in the scientific course.

By examining Part II of the diagram it will be found that in the private academies, seminaries, etc., over 25 per cent are preparing for college, nearly 16 per cent in the classical course, and over 9 per cent in the scientific course.

DIAGRAM 2.—PART II.—*Number of students preparing for college, and proportion to whole number of students in the schools.*

B.—PRIVATE ACADEMIES, SEMINARIES, ETC.

	Total number of students.	Number of students preparing for college.		Percentage.
		Classical course.	Scientific course.	
United States	100,739	15,995	.....	15.87%
		.....	9,291	9.22%
North Atlantic Division	38,585	6,971	.....	18.06%
		.....	4,035	10.46%
South Atlantic Division	15,847	3,127	.....	19.85%
		.....	998	6.29%
South Central Division	19,553	3,126	.....	15.98%
		.....	2,076	15.73%
North Central Division	21,101	2,008	.....	9.51%
		.....	1,601	7.58%
Western Division	5,653	763	.....	13.50%
		.....	581	10.27%

In each of the geographical divisions the classical course has the larger percentage of students in this class of schools. The largest proportion, nearly 20 per cent of the whole number, is found in the South Atlantic Division, the North Atlantic Division having 18 per cent, the South Central Division nearly 16 per cent, the Western Division nearly 13½ per cent, and the North Central Division the lowest, 9½ per cent. In the scientific course the South Central Division has the largest proportion, nearly 16 per cent of the whole number of students, the North Atlantic Division nearly 10½ per cent, the Western Division over 10 per cent, the North Central Division 7½ per cent, and the South Atlantic Division having the lowest proportion, a little more than 6 per cent. It will be noticed that in the South Central and Western Divisions the percentage of students in each course is about the same, that is, nearly 16 per cent in the South Central Division and nearly 11 per cent in the Western Division.

An examination of the figures connected with this same diagram shows that of the 25,286 students in the private schools, in both courses, preparing for college, 11,006, or over 43 per cent, are found in the North Atlantic Division, while of the 31,765 students preparing for college in the public high schools in the country 15,460, or $48\frac{3}{5}$ per cent, are in the North Central Division alone, the North Atlantic States having the largest percentage of college preparatory students in the private academies and the Northwestern States the largest proportionate number in the public high schools.

GRADUATES.

Another interesting fact is the proportion of students in these schools who complete a certain prescribed course of study and graduate. This number includes a part of those preparing for college, and also quite a large proportion who do not pursue a higher course in college.

The following diagram (3) gives the number of graduates in each class of schools, together with proportion of each to the whole number:

DIAGRAM 3.—*Number of graduates in 1892, with proportion in each class of schools.*

	Public high schools.	Private academies, etc.	Percentage. Public.	Private.
United States	28,499	8,477	77.7%	22.3%
North Atlantic Division	10,836	4,237	71.89%	28.11%
South Atlantic Division	996	875	53.23%	46.77%
South Central Division	1,215	1,062	53.4%	46.6%
North Central Division	14,282	1,753	87.97%	12.03%
Western Division	1,170	550	68.02%	31.98%

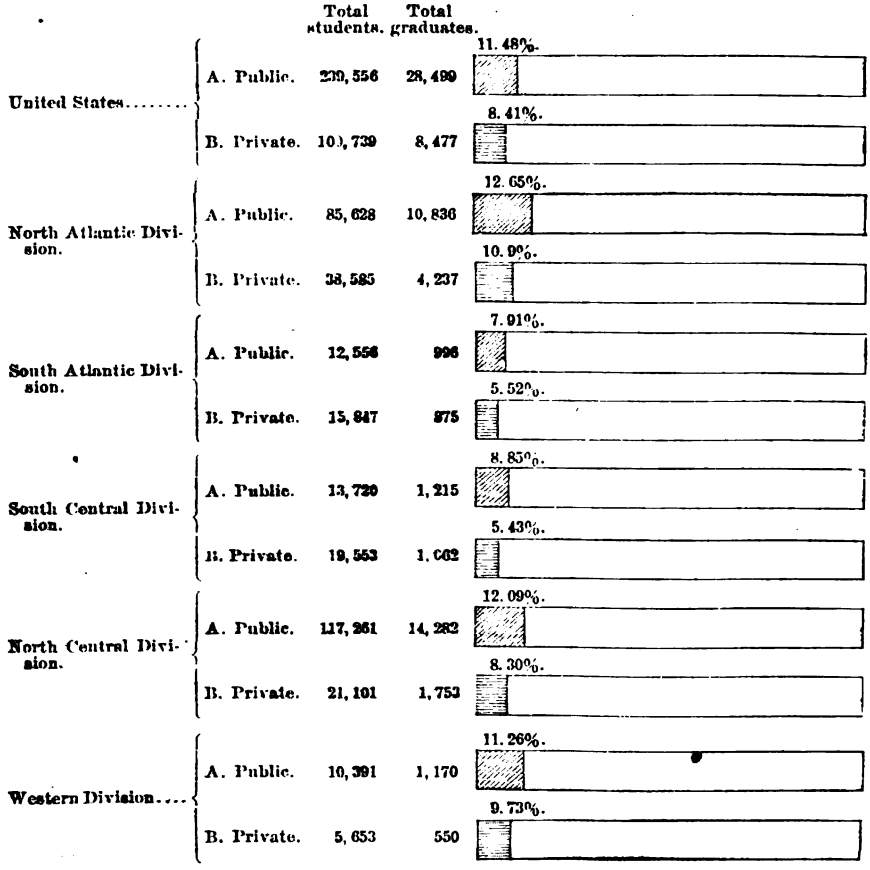
In the year 1892 there were reported, as shown in the diagram, in the United States, a total number of 36,976 graduates, of whom 28,499, or 77.7 per cent, were from the public high schools, and 8,477, or 22.3 per cent, from the private academies, etc.

Of the 28,499 graduates from the public high schools 14,182, or a little over one-half, came from the North Central Division, while of the 8,477 graduates from the private institutions the North Atlantic Division furnished 4,237, or nearly one-half of the whole number. The proportion of graduates in each class of schools to the other, in the several divisions, varies considerably. In every division the public high schools have the larger percentage, the largest being nearly 88 per cent in the North Central Division, about 72 per cent in the North Atlantic Division, 68 per cent in the Western Division, and 53 per cent in both the South Central and South Atlantic Divisions. In the private academies, etc., the largest proportion, nearly 48 per cent, is found in the South Atlantic Division, and nearly the same in the South Central Division; about 32 per cent in the Western Division, 28 per cent in the North Atlantic Division, and the lowest, 12 per cent, in the North Central Division.

It is interesting to note, in this connection, the proportion of graduates to the total number of students in each class of schools in the different geographical divisions, and to exhibit this proportion the following diagram (4) has been prepared:

DIAGRAM 4.—*Proportion of graduates to total number of students in each class of schools.*

[A. Public high schools. B. Private academies, seminaries, etc.]



The above diagram shows that the public high schools graduated nearly 11¼ per cent of the total number in attendance during the year, and the private academies nearly 8¼ per cent. In the North Atlantic Division the highest ratio of graduates is found in both the public high schools and in the private academies, the ratio being 12.65 per cent in the public and 10.9 per cent in the private schools.

The North Central Division graduated over 12 per cent of the attendance in the public schools and over 8 per cent in the private schools. In the Western Division, over 11 per cent in the public schools and almost 10 per cent in the private schools graduated. In the South Central Division the percentage is 8.85 per cent in the public schools and 5.43 in the private schools, while in the South Atlantic Division almost 8 per cent in the public schools graduated and over 5½ per cent in the private academies.

It is, of course, evident that these figures and percentages alone do not necessarily show the grade of the schools in the different sections of the country, because the standards required for graduation vary somewhat in the different classes of schools. If uniformity in courses of study should be adopted for secondary schools, then the percentage of students completing the course in any school or class of schools would become a more significant fact for comparison.

STUDIES PURSUED IN SECONDARY SCHOOLS.

In order to show the condition of the schools, as indicated by the studies pursued in them, the following summaries have been prepared. Table III, following, gives the number of students pursuing the principal studies in the public high schools in the country considered as a whole, and geographical divisions, and also by States and Territories:

TABLE III.—*Number of students in each branch of study in public high schools.*

Atlantic Division. In algebra the number of students is much greater, being 117,236, of whom nearly one-half were in the North Central Division. In geometry and trigonometry the numbers are much less, but the larger proportion in geometry being in the North Central Division. There were only 54,686 students in physics and 24,386 in chemistry. In general history there were 74,206 students, the larger number being in the North Central Division.

In Table IV below, the same statistics are given for the private academies, etc., arranged in the same way for comparison with the public high schools.

TABLE IV.—*Number of students in each branch of study in private secondary schools.*

From this table it is seen that of the 38,892 students in Latin in the private academies and seminaries, etc., 16,637 were in the North Atlantic Division, the South Atlantic Division having the next highest number, 7,414, the North Central Division having only a few less, and the South Central Division about 1,000 less. Of the 8,543 in Greek 4,917 were in the North Atlantic Division. Of the 16,821 in French 9,607 were in the North Atlantic Division and 2,749 in the South Atlantic Division. Of the 14,519 in German the North Atlantic Division had a little over one-half and the North Central Division 3,836. Of the 44,899 in algebra 16,497 were in the North Atlantic

Division, 10,004 in the South Central Division, and over 8,000 each in the South Atlantic and North Central divisions. In geometry the number is only 19,810, with a large proportion in the North Atlantic Division. In trigonometry the number of students was only 4,405, the South Central Division having the largest number, 1,353. The other studies are nearly in the same proportion among the geographical divisions.

To show the relative importance of the studies pursued in these schools in the United States diagram 5 has been prepared. This gives the number of students in each study and the percentage of these in each study to the whole number of students in each class of schools. The arrangement of the diagram is made so as to show the comparison between the public and private schools and indicates their relation to each other in each study.

DIAGRAM 5.—*Number and percentage of students pursuing certain studies to whole number of students in the schools.*

A. Public high schools. Whole number of students, 239,556.

B. Private academies, seminaries, etc. Whole number of students, 100,739.

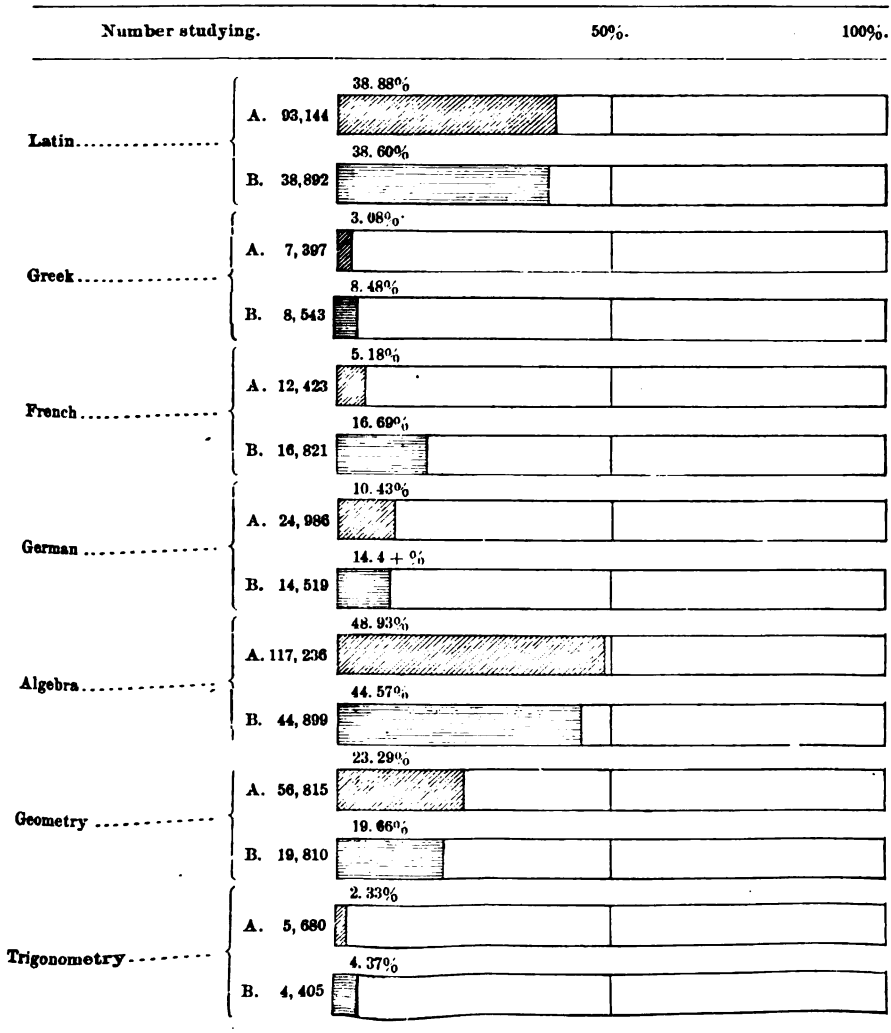

DIAGRAM 5.—*Number and percentage of students pursuing certain studies to whole number of students in the schools*—Continued.

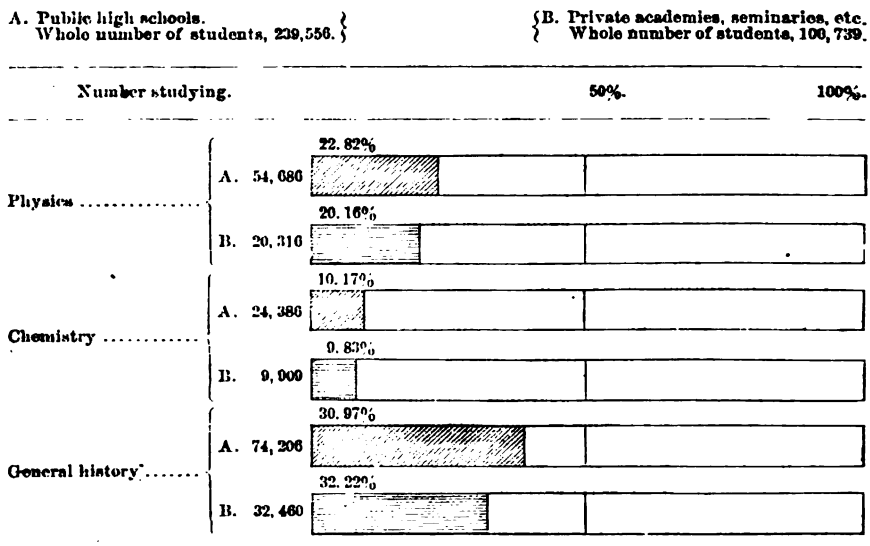

It is interesting to note in the above diagram the large proportion of those studying Latin and that it is so nearly alike in both the public and private schools, being nearly 39 per cent of the total number. Only 3 per cent of those in the public schools study Greek, while in the private schools the proportion is nearly three times as great. But a little more than 5 per cent study French in the public schools, while the private schools have three times as many in the same study. The students of German in the public schools are about 10½ per cent; in the private schools, 14 per cent. In algebra the public schools have nearly 49 per cent of all their students; the private schools, over 44½ per cent. In geometry the proportions are 23.71 per cent in the public schools and nearly 20 per cent in the private schools. Students of trigonometry are only a little more than 2½ per cent in the public schools and 4½ per cent in the private schools. In physics the proportion is about 23 per cent in the public schools and 20 per cent in the private schools. In chemistry the number is about the same in each, nearly 10 per cent, and in general history the students in the public schools are about 31 per cent and in the private schools a trifle over 32 per cent.

In order to show the status of secondary schools in regard to the number of students pursuing the principal studies in such schools, the following table (V) has been prepared, which gives the number and percentage of students in ten different studies, comparing public and private schools together. The table gives first the whole country, then by geographical divisions, and lastly the detailed figures and percentages for each State and Territory, and in every case for each study separately.

This table makes it possible to see at a glance the condition of the schools in any section or State in regard to any study or class of studies, as classics, modern languages, mathematics, or physics, etc., and to see how the two classes of schools compare with each other in regard to studies, or rather in regard to the number pursuing certain studies.

TABLE V.—*Percentage of students pursuing certain studies to the whole number of secondary students in the secondary schools*—Continued.

By examining the above table, in connection with diagram 5, it will be found that the proportionate number of students pursuing the several studies varies greatly in different parts of the country. In diagram 5 the percentages are given for the whole country only.

Latin.—In this table, by comparing the geographical divisions, it is seen that of the students in Latin the South Atlantic Division has the highest percentage in both the public and private schools, being 55 per cent in the former and almost 47 per cent in the latter. In the public schools the next highest percentage is in the South Central Division, being nearly 48 per cent; while in the remaining three divisions the percentage is almost the same, about 37 per cent for each. In the private schools the second highest in Latin is the North Atlantic Division, 43 per cent, with a little over 32 per cent in the South Central and North Central Divisions, and 28 per cent in the Western Division. By comparing the States, North Dakota shows 89 per cent in Latin, although having but a small number of students; Georgia, 80 per cent; North Carolina, nearly 70 per cent; Louisiana, nearly 64 per cent; District of Columbia, 55.64 per cent; Kentucky, 55 per cent; Rhode Island, nearly 55 per cent; New Hampshire, 54.1 per cent; and so down through the list of States, with varying proportions, to Nevada, which is the lowest in rank, having only 4 per cent. In the private schools the highest ratio is the State of Nevada, being 100 per cent; Delaware, 68 per cent; Wisconsin, 58 per cent; Connecticut, 57 per cent; Rhode Island, about 52 per cent; Indiana, 50 per cent; New Jersey and Massachusetts, nearly 49 per cent. Montana is the lowest in the list, a little over 8 per cent; Wyoming, Arizona, and Idaho having no reports.

Taking the States by geographical divisions and making comparisons, it will be found that in the public schools of the States in the North Atlantic Division Rhode Island has the largest ratio, 54.72 per cent, and New York the smallest, 27.65 per cent. In the private schools of the same division Connecticut has the largest, 57 per cent, and Vermont the lowest, 32.18 per cent. In the South Atlantic Division North Carolina has the highest ratio, 68.73 per cent in the public schools, and Virginia the lowest, 7.47 per cent, while in the private schools of this division Delaware has the highest, 68 per cent, and West Virginia the lowest, 18.33 per cent. Of the States in the South Central Division Louisiana has the greatest ratio, 63.56 per cent of Latin students in the public schools, and Arkansas the lowest, 33.14 per cent; while in the private schools in the same division Kentucky has the highest ratio, 39.34 per cent, and the Indian Territory the lowest, 13.18 per cent.

In the public schools of the North Central Division North Dakota has 89.4 per cent, the highest ratio, and Wisconsin the lowest, 21.44 per cent; while in the private schools Wisconsin has the highest ratio, 59 per cent, and North Dakota the lowest, 20.55 per cent in this study. In the public schools of the Western Division California has the highest ratio, 44.94 per cent, of students in Latin, and Nevada the lowest, 4.1 per cent; while in the private schools of this division Nevada has the highest ratio, 100 per cent, and Montana the lowest, 8.17 per cent.

Greek.—In Greek, the proportion of students is very much smaller, the State having the largest ratio in the public schools being New Hampshire, with nearly 28 per cent, the lowest being Louisiana, with 1.36 per cent. In the private schools New Jersey has the highest ratio, almost 17 per cent, in Greek, while North Carolina, Delaware, Louisiana, Arkansas, Indian Territory, North Dakota, South Dakota, Wyoming, New Mexico, Arizona, Nevada, Idaho, and Oregon report no Greek students whatever, and Indiana reports not quite two-tenths of 1 per cent.

French.—The proportion of students in French also varies greatly. Of the public schools in the North Atlantic Division the largest ratio is in Massachusetts, almost 28 per cent; the lowest, Pennsylvania, only nine-tenths of 1 per cent. In the private schools New York has the largest ratio, 34.25 per cent, and Maine the lowest, over 8.50 per cent. In the South Atlantic Division the public schools of Georgia have the highest ratio, 15.65 per cent; while Delaware, the District of Columbia, West Virginia, and South Carolina have no students in French, and North Carolina only about 2 per cent. In the private schools Delaware has the highest ratio, 45.6 per cent, and West Virginia the lowest, about four-fifths of 1 per cent. In the South Central Division, in the public schools, the highest ratio is in Louisiana, almost 18 per cent; while in Texas, Arkansas, and Indian Territory there are no students in French, and Kentucky has two-thirds of 1 per cent. In the private schools Louisiana has the highest, over 52.5 per cent, and Arkansas the lowest, about two-fifths of 1 per cent. In the North Central Division, in the public schools, the highest ratio is in Minnesota, over 6 per cent; while Indiana, North Dakota, South Dakota, and Nebraska report none, and Iowa one-fourth of 1 per cent. In the private schools Michigan has the greatest ratio, 16 per cent, and Iowa the lowest, not quite 2 per cent. In the Western Division, in the public schools, Colorado has the highest ratio, about 6 per cent; while Wyoming, New Mexico, Arizona, Nevada, Idaho, Washington, and Oregon report none, and Montana but one-fifth of 1 per cent. In the private schools Nevada, though reporting but a very few secondary schools, has the highest ratio in French, being over 52½ per cent, and Utah the lowest, not quite 3 per cent.

German.—The proportion of students in German varies greatly in different sections of the country. In the North Atlantic Division, in the public schools, Connecticut has the highest ratio, over 17 per cent, and New Hampshire the lowest, not quite one-half of 1 per cent. In the private schools New York has the greatest proportion, 26 per cent, and Maine the lowest, not quite 2 per cent. In the South Atlantic Division, in the public schools, the District of Columbia has the highest ratio, over 27.5 per cent; while Delaware reports none, and North Carolina only a little over 1 per cent. In the private schools Maryland has over 36.5 per cent, the highest ratio, and Georgia the lowest, not quite 1.5 per cent. In the South Central Division, in the public schools, Kentucky has the largest ratio, over 17 per cent, while Mississippi, Louisiana, and Indian Territory report none, and Arkansas 2¼ per cent. In the private schools Tennessee has the highest ratio, over 14 per cent, and Mississippi the lowest, 1.75 per cent. In the North Central Division, in the public schools, Nebraska has the highest ratio, over 22 per cent, and North Dakota the lowest, 2.25 per cent. In the private schools Wisconsin has the highest ratio, 58.75 per cent, and North Dakota the lowest, about 8.25 per cent. In the Western Division, in the public schools, Colorado has the highest ratio, over 24 per cent; while Wyoming, Arizona, and Idaho report none, and New Mexico only 3½ per cent. In the private schools Oregon has the largest proportion, 23.2 per cent, and Wyoming, Arizona, and Idaho make no report, while Montana has almost 5 per cent.

Very interesting results can be found by going over the entire list of the studies of which the statistics and percentages are compiled in this table. The facts relating to the studies are given as indicating what a complete analysis of the table will show, and the table itself is so full and complete that it is not thought necessary to go further into the details.

PROPORTION AS TO SEX IN SECONDARY SCHOOLS.

The question of the proportion of the sexes in the secondary schools becomes a matter of interest in comparing a series of years, so that changes, if any, can be noted. For this reason the following Table VI has been prepared, giving as far as possible the number and percentage as to sex of instructors and students, including the students preparing for college. There is also given the percentage of each sex preparing for college to the whole number in the school.

TABLE VI.—*Ratio of male and female instructors and students, and students preparing for college, classical and scientific courses, in secondary schools in the United States, 1891–'92.*

	Instructors.			White students.			Colored students.		
	Number.	Percentage.		Number.	Percentage.		Number.	Percentage.

	Number.	Percentage.		Number.	Percentage.		Number.	Percentage.			
		Male.	Female.		Male.	Female.		Male.	Female.	Male.	Female.
Public schools	15,233	54.55	45.44	16,532	49.55	50.45	31,741	52	48	17.3	10.7
Private academies, seminaries, etc.	15,995	97	3	9,291	73.52	26.48	25,286	72.12	27.88	34.72	14.58

The foregoing table shows that of the instructors, 56¾ per cent in the public high schools and 52.75 per cent in the private academies, etc., are women. Of the white students in the public schools 60 per cent are females, and in private academies, etc., not quite 48 per cent, the males having a majority in the private schools alone. Of the

colored students in the public schools, about 61.5 per cent are females, and in the private academies, etc., the sexes differ less than 1 per cent. Of the students preparing for college in the classical course of the public high schools, the males are 54.5 per cent to 45.5 per cent females, while in the private academies, the males are 97 per cent, the females only 3 per cent. Of those in the scientific course preparing for college, in the public schools, the males are 49.5 per cent, the females 50.5, less than 1 per cent difference, while of those in the same course in the private academies, the males are 73.5 per cent, and the females 26.5 per cent. Taking the preparatory students in both courses together, in the public high schools, the ratio is 52 per cent males to 48 per cent females; in the private academies, it is 72 per cent males to almost 28 per cent females. The ratio of male students preparing for college in both courses to the whole number of male students in the schools is 17.3 in the public schools and 34.75 per cent in the private academies; while the ratio of female preparatory students to the total number is, in the public schools, 10.7 per cent, and in the private academies, nearly 14.6 per cent.

Another interesting fact in connection with sex is a comparison as to the ratio of each sex pursuing different studies in the schools. The following Table VII gives the percentage of male and female students for each of ten different studies in both classes of schools, by geographical divisions, the public and private schools being arranged together under each division, for easy comparison.

TABLE VII.—*Percentage of male and female students pursuing certain studies, 1891-'92.*

	B	51.08	48.93	52.1	47.9	44.73	55.27	36.98	63.02	42.37	57.63
North Central division	A	37.59	62.41	38.15	61.85	39.04	60.95	38.38	61.62	37.98	62.02
	B	59.03	40.97	59.36	40.64	53.71	46.29	56.28	43.72	46.89	53.11
Western division	A	41.19	58.81	43.07	56.93	38.76	61.24	40.77	59.23	40.94	59.06
	B	55.19	44.81	55.67	44.33	42.06	57.94	51.19	48.81	41.46	58.54

On examination of the above table it will be seen that in the public high schools the females are over 60 per cent of the students pursuing all the ten studies named, except Greek and trigonometry, and a majority in Latin, French, German, algebra, geometry, trigonometry, physics, chemistry, and general history, that is in all the studies except Greek, in which the ratio is 62½ per cent males to 37½ per cent females. In trigonometry the females are 57 per cent. In the private academies, the males are a majority in Latin, Greek, German, algebra, geometry, trigonometry, and chemistry, the highest ratio being in Greek, nearly 85 per cent. The females have the larger percentage in French, physics, and general history, the highest ratio being in French, 63.75 per cent.

The various geographical divisions differ considerably in the relative percentages of the sexes pursuing certain studies. For instance, in the public high schools, of those studying Latin, the majority are females in every division; in the private academies, the males are a majority in every division except the South Central. Of the students in Greek, a very large percentage are males, in both classes of schools and in every division; while in French the opposite is true, the larger percentage being females in both classes in all divisions. In German, in the public high schools, the large proportion are males in every division except the South Central, and in that the two sexes are equal. In the private academies the males are the greater ratio in all divisions except the South Central and the Western divisions. Of the students in algebra in the public high schools, the greater proportion are females in all the divisions, the largest ratio, over 61 per cent being in the South Atlantic division; while in the private academies the males have the majority in every division except the South Central, and in that not quite 1 per cent less. In geometry, the females are the greater number in the public schools in all but the South Central division. In the private academies the males have a majority in all the divisions. In trigonometry the males predominate in the public schools only in the North Atlantic division and South Atlantic division; while in the private academies the males are the larger percentage in all divisions, being the greatest in the North Atlantic division, or 72 per cent. In the public high schools, of students in physics, chemistry, and general history, the greater ratio are males in all the divisions, while in the private academies, in physics, the females are the greater ratio in the South Central and Western divisions. In chemistry in the South Atlantic and South Central divisions, and in general history, the females have a greater percentage in all except the South Atlantic division.

CHAPTER XIX.

UNIVERSITIES AND COLLEGES.

DISCUSSION OF STATISTICS.

Number of institutions.—The number of universities and colleges reporting to this office during the year 1891-'92 was 442, showing an increase of 12 over the number reporting during the previous year. Prominent among the new institutions reported are the University of Arizona, at Tucson, Ariz., and the Leland Stanford Junior University, at Palo Alto, Cal.

The University of Arizona was established by an act of the Territorial legislature in 1885, but owing to a lack of funds the institution was not opened to students until October 1, 1891. The act establishing the University of Arizona provides for the following departments:

First. The Department of Science, Literature, and the Arts.
Second. The Department of Theory and Practice, and Elementary Instruction.
Third. The Department of Agriculture.
Fourth. The Normal Department.
Fifth. The Department of Mineralogy and the School of Mines.

Only two of these departments, the third and fifth, have thus far been opened to students. This action was rendered necessary owing to the insufficiency of the income to equip and support all the departments. The resources of the institution at present consist of the $15,000 per annum for experiment stations and of the appropriations by the act of August 30, 1890, to agricultural and mechanical colleges. No funds from the act of July 2, 1862, are yet available. The university reported for its first year 9 professors and 31 students.

The Leland Stanford Junior University, at Palo Alto, Cal., was determined upon by the Hon. Leland Stanford and Jane Lathrop Stanford in 1884. November 14, 1885, the grant of endowment was publicly made, and on the same day the board of trustees held its first meeting in San Francisco. The work of construction was at once begun and the corner stone laid May 14, 1887. The university was formally opened to students October 1, 1891. The property conveyed to the university consists of the Palo Alto estate of 8,400 acres, the Vina estate of 55,000 acres, and the Gridley estate of 22,000 acres. The value of the endowment is generally estimated at about $25,000,000. The general management and control of the institution are vested in a board of 24 trustees, but the charter provides that the founders, during their lives, shall "perform all the duties and exercise all the powers and privileges enjoined upon and vested in the trustees." Tuition in all departments is free and board is furnished at cost. The number of professors and instructors during the first year was 38, while the students numbered 558, of which number 38 were graduate students. The university does not furnish preparatory instruction.

Professors and instructors.—The following table gives the number of professors and instructors, male and female, in the several departments of universities and colleges:

Number of professors and instructors in universities and colleges in 1891-'92.

States and Territories.	Number of institutions.	Preparatory departments.		Collegiate departments.		Professional departments.		Total number.

California	15	57	26	159	29	73	1	288	52

The above table shows that of the total number of instructors reported, 1,270, or 13.6 per cent were women. Examining these figures by departments, we find that of the number of instructors in the preparatory departments, 28.8 per cent were women, while in the college departments but 9.9 per cent were women. The smallest ratio of women instructors in college departments is found in the North Atlantic Division, where it is but 2.7 per cent.

Students.—The summarized statistics respecting students in the several departments for the year under consideration are given very fully according to color and sex in the following tables:

Students in universities and colleges, 1891-'92—Continued.

States and Territories.	Preparatory departments.						Collegiate departments.						Graduating departments.

An examination of these tables shows that the students in the several departments according to color are as follows:

	White.	Colored.	Unclassified.
	Per cent.	*Per cent.*	*Per cent.*
Preparatory departments	90.4	7.7	1.9
College departments	91.3	1.2	7.5
Graduate departments	89.3	.1	10.6
Professional departments	83.3	3.8	12.9
All departments	88	6	6

The proportion of male and female students in the several departments is as follows:

	Male.	Female.	Unclassified.
	Per cent.	*Per cent.*	*Per cent.*
Preparatory departments	70.3	29.7	0
College departments	80.7	19.1	.2
Graduate departments	87.3	12.7	0
Professional departments	97.2	2.8	0
All departments	74.6	23.6	1.8

The number of students pursuing the several courses of study are given in the following table:

Students in universities and colleges, 1891–'92.

States and Territories.	Number in collegiate departments pursuing courses leading to—						Number in pedagogical course.	Number in business course.	Number in other special or partial courses.
	A. B. degree.	B. S. degree.	B. L. degree.	Ph. B. degree.	C. E. degree.	Other first degrees.

This table shows that of 41,397 students in college departments pursuing courses of study leading to a degree, 58.7 per cent are in courses leading to A. B., 19.8 per cent to B. S., 6.2 per cent to B. L., 8 per cent to PH. B., 2.8 per cent to C. E., and 4.5 per cent in courses leading to other first degrees. Students pursuing courses leading to advanced degrees like A. M., PH. D., etc., are not included. This table also shows that a large number of students are included in pedagogical and business courses.

An attempt was made during the year to obtain information concerning the preparation of college students. To this end the following question was included in the blank form sent to universities and colleges:

Number of students in freshman class who were prepared in preparatory departments of colleges, ...; in private preparatory schools. .....; in public high schools. .....; by private study, ...

Replies to this question were received from but 234 of the 442 institutions. The results of this inquiry are given in the following table:

Preparation of freshmen of 1891-'92.

States and Territories.	Number of institutions reporting.	Total number of freshmen included.	Number of freshmen of 1891-'92 prepared by—				Per cent of freshmen of 1891-'92 prepared by—			
			Preparatory departments of colleges.	Private preparatory schools.	Public high schools.	Private study.	Preparatory departments of colleges.	Private preparatory schools.	Public high schools.	Private study.

California	9	613	99	143	306	65	16.2	23.3	49.9	10.6

According to these statistics, of the 9,254 students included, but 35.8 per cent were prepared in public high schools. The showing made by the North Central Division in this respect would seem to be very discouraging, considering the efforts of the State universities to bring themselves into intimate relations with the high schools. The poor showing made by this division is explained, however, by the fact that reports on this point were not made by the State universities of Michigan, Kansas, Missouri, Nebraska, and Wisconsin, which are in close relations with the public high schools of their respective States.

Equipment.—The following table gives in a summarized form the number of scholarships, fellowships, and endowed professorships, the number of volumes and pamphlets in the libraries, the value of the scientific apparatus and libraries, the value of grounds and buildings, and the total amount of productive funds, or endowment as it is frequently called:

Universities and colleges, 1891-'92.

California	115,364	131,450	102,435	48,000	298,252	695,501	16,600

This table shows that of the total income of $14,256,026, but 33.8 per cent was received from tuition fees, 34 per cent from productive funds, 16 per cent from State or municipal appropriations, 4.5 per cent from the U. S. Government, and the remainder, or 11.7 per cent, was obtained from miscellaneous sources. The amount of benefactions received by these institutions was $6,464,438. This, of course, does not include the amounts given to the University of Chicago, which has not yet made a report to this office. Of the total amount received, the insti-

tutions in the North Atlantic Division report 56.3 per cent, the institutions in the North Central Division 31.3 per cent, while the remainder is divided in small amounts among the other three divisions.

Degrees.—The following tables give first, the number of degrees, excluding professional degrees, conferred on examination in 1891-'92; and second, the number of honorary degrees conferred during the same period:

Number of degrees conferred on examination by universities and colleges in 1891-'92.

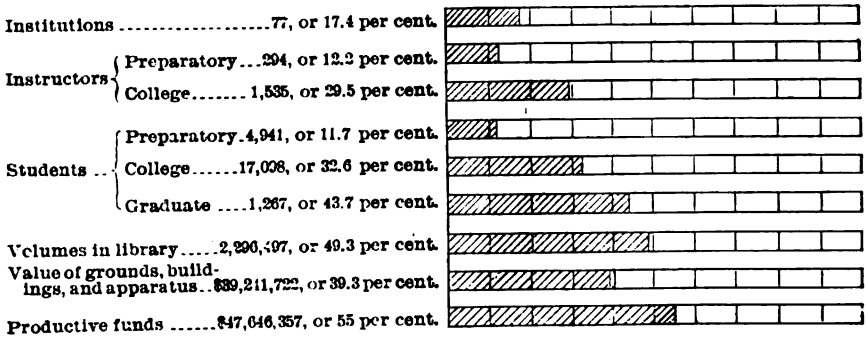
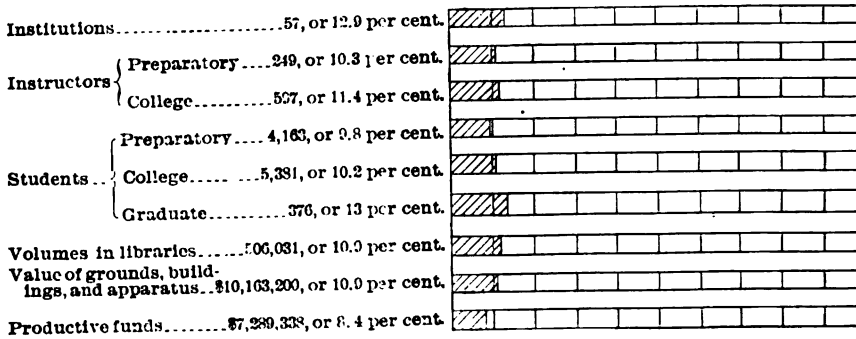
In the following diagrams an attempt has been made to represent graphically the proportion of leading items concerning universities and colleges reported by the several geographical divisions of the country:

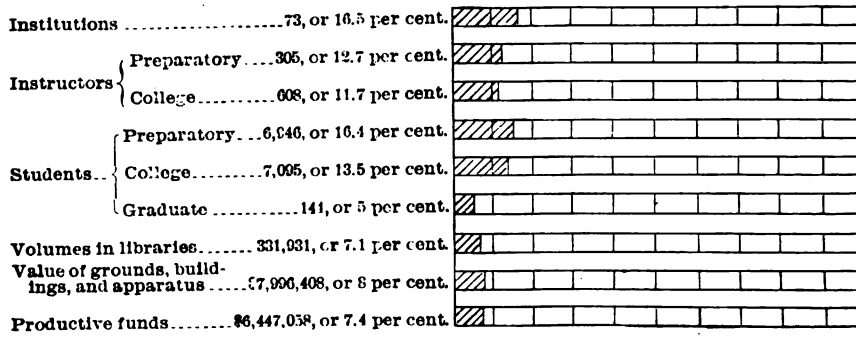
NORTH ATLANTIC DIVISION.



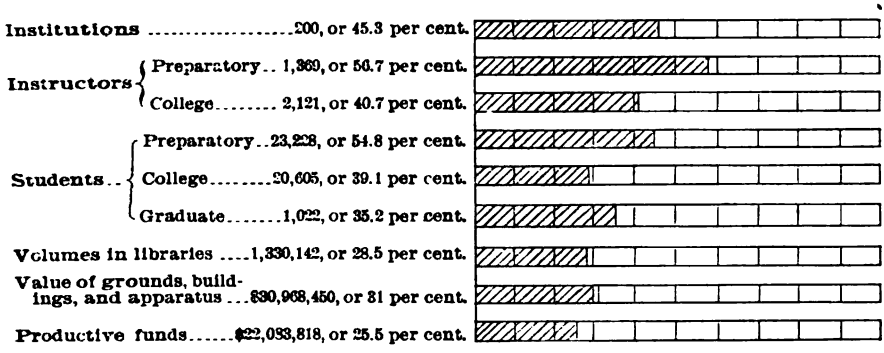
SOUTH ATLANTIC DIVISION.



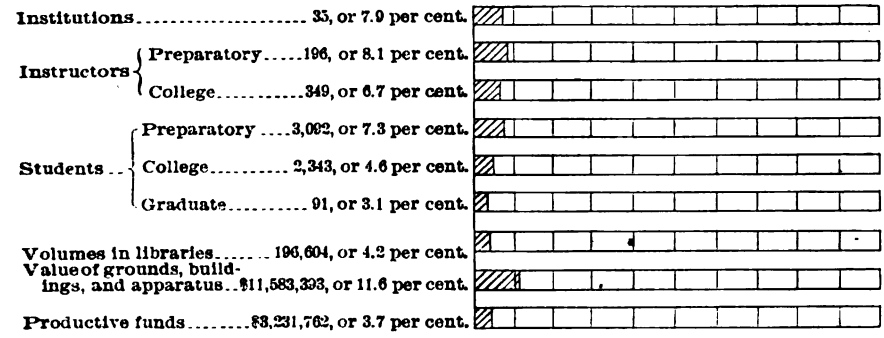
SOUTH CENTRAL DIVISION.



NORTH CENTRAL DIVISION.



WESTERN DIVISION.



CHAIRS OF PEDAGOGY IN UNIVERSITIES AND COLLEGES.

The catalogues of the following-named institutions show that professors of pedagogy, didactics, or science and art of teaching, are included in the faculties of the several institutions. An asterisk (*) placed before the name of an institution shows that the professorship includes other studies besides pedagogy, while a dagger (†) denotes a lectureship:

* La Fayette College, La Fayette, Ala.
* Hendrix College, Conway, Ark.
* Arkansas Industrial University, Fayetteville, Ark.
University of California, Berkeley, Cal.
Leland Stanford Junior University, Palo Alto, Cal.
* University of Colorado, Boulder, Colo.
† Yale University, New Haven, Conn.
* John B. Stetson University, De Land, Fla.
* Seminary West of the Suwannee River, Tallahassee, Fla.
University of Illinois, Champaign, Ill.
University of Chicago, Chicago, Ill.
Northwestern University, Evanston, Ill.
Illinois College, Jacksonville, Ill.
Lake Forest University, Lake Forest, Ill.
* Wheaton College, Wheaton, Ill.
Indiana University, Bloomington, Ind.
* Union Christian College, Merom, Ind.
Moores Hill College, Moores Hill, Ind.
* Ridgeville College, Ridgeville, Ind.
* Drake University, Des Moines, Iowa.
* Iowa College, Grinnell, Iowa.

* Simpson College, Indianola, Iowa.
* State University of Iowa, Iowa City, Iowa.
* Iowa Wesleyan University, Mount Pleasant, Iowa.
* Cornell College, Mount Vernon, Iowa.
* University of the Northwest, Sioux City, Iowa.
† Tabor College, Tabor, Iowa.
Western College, Toledo, Iowa.
* Central College, Enterprise, Kans.
* Campbell University, Holton, Kans.
University of Kansas, Lawrence, Kans.
* Lane University, Lecompton, Kans.
* Kansas Wesleyan University, Salina, Kans.
* Southwest Kansas College, Winfield, Kans.
† Berea College, Berea, Ky.
Agricultural and Mechanical College of Kentucky, Lexington, Ky.
Harvard University, Cambridge, Mass.
† Wellesley College, Wellesley, Mass.
Clark University, Worcester, Mass.
Adrian College, Adrian, Mich.
University of Michigan, Ann Arbor, Mich.
Western Michigan College, Grand Rapids, Mich.
* Olivet College, Olivet, Mich.
University of Minnesota, Minneapolis, Minn.
* St. Olaf College, Northfield, Minn.
* Gustavus Adolphus College, St. Peter, Minn.
University of Mississippi, University, Miss.
* Carthage Collegiate Institute, Carthage, Mo.
University of the State of Missouri, Columbia, Mo.
Cotner University, Bethany, Nebr.
† York College, York, Nebr.
University of Nevada, Reno, Nev.
* College of New Jersey, Princeton, N. J.
* University of New Mexico, Albuquerque, N. Mex.
Cornell University, Ithaca, N. Y.
* Keuka College, Keuka College, N. Y.
† Columbia College, New York, N. Y.
University of the City of New York, New York, N. Y.
* Syracuse University, Syracuse, N. Y.
* Fargo College, Fargo, N. Dak.
* University of North Dakota, University, N. Dak
* Ohio University, Athens, Ohio.
Findlay College, Findlay, Ohio.
* Muskingum College, New Concord, Ohio.
* Muhlenberg College, Allentown, Pa.
* Lebanon Valley College, Annville, Pa.
* Ursinus College, Collegeville, Pa.
* Monongahela College, Jefferson, Pa.
* Swarthmore College, Swarthmore, Pa.
Claflin University, Orangeburg, S. C.
* Black Hills College, Hot Springs, S. Dak.
University of Tennessee, Knoxville, Tenn.
* Maryville College, Maryville, Tenn.
* Carson and Newman College, Mossy Creek, Tenn.
University of Texas, Austin, Tex.
* Howard Payne College, Brownwood, Tex.
University of Utah, Salt Lake City, Utah.
Randolph Macon Woman's College, Lynchburg, Va.
† Whitworth College, Sumner, Wash.
West Virginia University, Morgantown, W. Va.
* Beloit College, Beloit, Wis.
* University of Wisconsin, Madison, Wis.
* University of Wyoming, Laramie, Wyo.

CHAPTER XX.

COLLEGES FOR WOMEN.

DISCUSSION OF STATISTICS.

Division A.—The total number of colleges for women reporting to this Office during the year 1891–'92 was 158, of which number 14 have been placed in a class by themselves. The summarized statistics of these 14 institutions are given in the two following tables:

COLLEGES FOR WOMEN, 1891–'92—DIVISION A.

Ohio	170,000					60,000
Western Division:						
California	75,000	50,000	5,000		55,000	1,000

An examination of these tables shows that the preparatory work done by these institutions is very little indeed, the number of students pursuing such work being but 15.9 per cent of the total number. Another noticeable feature is the large proportion of students pursuing courses of study leading to the degree of A. B. The number of such students is 1,293, or 66.4 per cent of the total number in degree courses. The preparation of the freshmen of these schools forms another interesting item. While it is found that in the colleges for males and in the coeducational colleges but 35.8 per cent of the students were prepared in public high schools, the foregoing table shows that 63.2 per cent of the freshmen included in the table were prepared in such schools. The institutions in this class are fairly well endowed, 81.1 per cent of the total amount of productive funds reported by colleges for women being reported by these few institutions.

Division B.—The statistics relating to professors and students of the 144 colleges for women of Division B are included in the following summarized table:

COLLEGES FOR WOMEN, 1891-'92—DIVISION B.

As will be seen from this table, a comparatively large number of students are reported in the primary department. A large number of the institutions included in this division maintain courses of study from the kindergarten to the end of a college course, thus rendering necessary the maintaining of a large number of classes. The proportion of students in courses of study leading to a degree is comparatively small, but the number of students pursuing studies in music and art is large.

Some idea of the kind of instruction imparted by these institutions may be obtained from the following table, giving the number of students pursuing the different studies in 1891-'92:

Number of students pursuing the following studies.

States.	Number of college students reported by institutions reporting number of students in the several studies.	Latin grammar.	Cæsar.	Cicero.	Virgil.	Livy.	Horace.	Tacitus.	Juvenal.	Greek grammar.	Xenophon.	Homer.

The above table shows that the institutions reporting the number of students pursuing the several studies also reported 6,016 students in the college departments. Excluding the studies in the above table commonly known as preparatory studies, we find that the number of students pursuing the several studies is small when compared with the number of college students reported.

The items respecting the property and income of the 144 institutions are given in the following table:

CHAPTER XXI.

THE PLACE OF UNIVERSITY EXTENSION IN AMERICAN EDUCATION.

[The following address, delivered by the Commissioner of Education at the First Annual Meeting of the National Conference on University Extension, held at Philadelphia, December, 1891, discusses the significance of the new movement, and its bearings on the educational means and appliances now existing in the United States.]

LADIES AND GENTLEMEN, DELEGATES TO THE NATIONAL CONFERENCE ON UNIVERSITY EXTENSION: I have been requested to direct my remarks to the general bearings of the question of university extension. I shall therefore offer some considerations regarding the threefold structure of our educational system into elementary, secondary, and higher education, and discuss the general features which distinguish each grade. I shall endeavor to show that higher education is the sanest and healthiest form of education, because it gives the student the means of correcting one-sided views. It gives him the method of study which compares one science with another and one branch of learning with another, and always bears in mind the important question: How does this element of knowledge relate to the conduct of human life? From this point of view I shall explain why university extension seems to me to be one of the most important movements in our time. An exhibition of the fragmentary nature of elementary education and the necessity which has caused this fragmentary character to adhere to it, will make it evident, I hope, that the directors of higher education have a sacred duty to perform in extending, by all legitimate means, the spirit of their methods into the studies which the adult population carry on by means of the newspaper, the periodical, and the book, throughout life.

Let me ask your attention, first, to the general aspects of our civilization. Let us consider the active means at work to produce cosmopolitan civilization and obliterate local and provincial peculiarities.

The most striking characteristic of our modern civilization is that which has to do with the intercommunication of one people with another. The wonders of modern invention are to be found especially in this field of human activity. In the first place, the facilities for travel by land and by sea bring together a greater and greater number of people in each succeeding year. Think of the increase of the number of Americans that have visited Europe—of the number of Europeans that have visited America. Think of the increasing number of people residing in the Atlantic slope who have visited the cities of the Mississippi Valley and the far-off Pacific coast. The personal presence

and the humane, friendly interest of foreign people in this country form a perpetual educative influence, converting our people to cosmopolitan views and sympathies. But the educative influence of travel is small compared with that of intercommunication by means of letters and literature. In our time we have seen epic, dramatic, and lyric literature retire into the background before the novel or romance as a literary work of art. The novel has been called the prose epic, or the epic of commonplace, middle-class citizens. But the novel in our time has extended its gamut from the description of society manners and customs and the petty events of courtship and marriage to the all-including scientific and historical movements which constitute the highest fields of intellectual labor. In the modern novel we have Shakespeare's mirror, that is held up to reflect society and the individual. We have the painting of the slums, the *demi-monde*, the processes of the schools, the Church; we have fully-colored pictures of ancient historic life, long buried, and brought to life only by the labors of archæology; we have a series of historical pictures, growing rapidly to a great gallery of paintings, illustrating mediæval times, the beginnings of modern times, and, finally, the events of a century ago—Tolstoi's Napoleonic wars, the Crimean war, Walter Scott's historical pictures; Victor Hugo, Thackeray, and a thousand writers less significant and still important. Each reading public learns to know the character and motives of its fellow-men in far-off countries or far-off epochs. Out of this comes the feeling of the solidarity of the human race. Every one feels that there is nothing human that he can consider to be entirely strange to him.

But even the novel is not to be compared, in its influence, with the daily newspaper and periodical press as an instrument invented by the human spirit to bring about the higher unity and synthesis of all peoples. Not only shall each people combine in itself the best that has been realized by other peoples, but each human individual shall take his morning survey of the daily movement of nations and colossal enterprises.

Here is the significance of our new university extension movement, which we are here to-day to celebrate by this conference. University extension proposes to avail itself of the new inventions and instrumentalities which have been developed in the interests of commerce and the ordinary interchange of opinion, and send the currents of higher thought, higher scholarship, and higher sentiment through these channels, so as to directly influence all men.

In brief, university extension proposes to itself to gain possession of the organs of public opinion, and it is evident that this enterprise is one of the most important undertaken in our century since the establishment of the common public school.

In the most advanced civilization we find the completest system of means for the formation and promulgation of public opinion. All persons in the community, by means of the newspaper, look upon the same event, look upon the same sketch of public policy marked out by the statesman, listen to the same arguments, and take sides in view of the weight of argument. The public opinion thus organized is not the public opinion of a village or a province. It is the public opinion of the whole country, and a public opinion which is formed, or secreted, so to speak, by the aggregate action of all the minds in the nation. In fact, this does not state it strongly enough. The public opinion of a newspaper-reading age is an international public opinion, a public opinion which takes into it as a determining element the views and opinions of other civilized nations.

But this kind of public opinion can not be found in an illiterate community, nor can the newspaper, which is the instrument for forming and disseminating such public opinion, penetrate an illiterate community.

In old times, before the statesman could watch the verdict of public opinion on a proposed measure, he was perhaps obliged to take action. The diplomats found themselves obliged to plunge the nation into war. In our time, with the telegraph, and the newspaper, and a universal reading people, the dial of public opinion is visible to all statesmen and leaders of the people, and it is possible to avoid an appeal to the final court of arms.

It is evident enough that the first requisite for the efficiency of these instrumentalities is a universal diffusion of common school education, and an ability on the part of all the people to read and understand the printed page. This is given in the common schools. The question arises at once, at this point: Why do not the common schools give an all-sufficient education? Why is not elementary education all that is desired among the people? Is it not true, that if the schools teach the people how to read, and the universal prevalence of periodicals and books furnishes what to read, that the life of the people is turned into a constant education? Will not such reading—such as the elementary school provides for—lead necessarily to the diffusion of all human learning?

In order to answer this question properly, and to see the grounds which exist for the movement known as university extension, let us consider for a moment the difference between elementary school education and university education. The child who is of the proper age to learn how to read has not acquired an experience of life sufficient for him to understand very much of human nature. He has a quick grasp of isolated things and events, but he has very small power of synthesis. He can not combine things and events in his little mind so as to perceive processes and principles and laws—in short, he has little insight into the trend of human events or into logical conclusions which follow from convictions and principles. This is the characteristic of primary or elementary instruction, that it must take the world of human learning in fragments and fail to see the intercommunication of things. The education in high schools and academies which we call secondary education begins to correct this inadequacy of elementary education; it begins to study processes; it begins to see how things and events are produced; it begins to study causes and productive forces. But secondary education fails, in a marked manner, to arrive at any complete and final standard for human conduct, or at any insight into a principle that can serve as a standard of measure. It is the glory of higher education that it lays chief stress on the comparative method of study; that it makes philosophy its leading discipline; that it gives an ethical bent to all of its branches of study. Higher education seeks as its goal the unity of human learning. Each branch can be thoroughly understood only in the light of all other branches. The best definition of science is that it is the presentation of facts in such a system that each fact throws light upon all the others and is in turn illuminated by all the others.

The youth of proper age to enter upon higher education has already experienced much of human life and has arrived at the point where he begins to feel the necessity for a regulative principle and guiding principle of his own with which he may decide the endless questions which press themselves upon him for settlement. Taking the youth at this

moment, when the appetite for principles is beginning to develop, the college gives him the benefit of the experience of the race. It shows him the verdict of the earliest and latest great thinkers on the trend of world history. It gathers into one focus the results of the vast labors in natural science, in history, in sociology, in philology, and political science in modern times.

The person who has had merely an elementary schooling has laid stress on the mechanical means of culture—the arts of reading, writing, computing, and the like. He has trained his mind for the acquirement of isolated details; but he has not been disciplined in comparative study. He has not learned how to compare each fact with other facts, nor how to compare each science with other sciences. He has never inquired, what is the trend of this science? He has never inquired, what is the lesson of all human learning as regards the conduct of life? We should say that he has never learned the difference between knowledge and wisdom, or, what is better, the method of converting knowledge into wisdom. The college has for its function the teaching of this great lesson—how to convert knowledge into wisdom, how to discern the bearing of all departments of knowledge upon each.

It is evident that the individual who has received only an elementary education is at a great disadvantage as compared with the person who has received a higher education in the college or university, making all allowance for imperfections in existing institutions. The individual is prone to move on in the same direction, and in the same channel, which he has taken under the guidance of his teacher. Very few persons change their methods after leaving school. It requires something like a cataclysm to produce a change in method. All of the influences of the university, its distinguished professors, its ages of reputation, the organization of the students and professors as a whole, these and like influences, combined with the isolation of the pupil from the strong tie of family and polite society, are able to effect this change in method when they work upon the mind of a youth for three or four years.

The graduate of the college or university is, as a general thing, in possession of a new method of study and thinking. His attitude is a comparative one. Perhaps he does not carry this far enough to make it vital; perhaps he does not readjust all that he has before learned by this new method; but, placing him side by side with the graduate of the common school, we see readily the difference in types of educated mind. The mind trained according to elementary form is surprised and captivated by superficial combinations. It has no power of resistance against shallow critical views. It is swept away by specious arguments for reform, and it must be admitted that these agitators are the better minds, rather than the weaker ones, which elementary education sends forth. The duller minds do not ever go so far as to be interested in reforms or take a critical attitude toward what exists.

The duller, commonplace intellect follows use and wont, and does not question the established order. The commonplace intellect has no adaptability, no power of readjustment in view of new circumstances. The disuse of hand labor and the adoption of machine labor, for instance, finds the common laborer unable to substitute brain labor for hand labor, and it leaves him in the path of poverty, wending his way to the almshouse.

The so-called self-educated man, of whom we are so proud in America, is quite often one who has never advanced far beyond these elementary methods. He has been warped out of his orbit by some shallow critical idea, which is not born of a comparison with each

department of human learning with all departments. He is necessarily one-sided and defective in his training. He is often a man of great accumulations of isolated scraps of information. His memory pouch is precociously developed. In German literature such a man is called a "Philistine." He lays undue stress on some insignificant phase of human affairs. He advocates with great vigor the importance of some local center, some partial human interest, as the great center of all human life. He is like an astronomer who opposes the heliocentric theory and advocates the claims of some planet, or some satellite, as the center of the solar system. In sociology these self-made men advocate, for instance, as a universal panacea for poverty such devices as the abolishing of all individual property in land, or a single tax, or a scheme of state socialism; or, on the other hand, the equally negative system of *laissez faire*—let each look out for himself, and let the Government forswear entirely all functions of nurture and provision for the common welfare. In the name of abstract justice, Mr. Herbert Spencer strikes at all of the concrete forms of governmnet in existence, and would fain cut them down to his procrustean standard, protecting free competition without provision for common welfare.

There is a conspicuous lack of a knowledge of the history of the development of social institutions in all this. The individual has not learned the slow development of the ideas of private property in Roman history, and he does not see the real function of property in land. Again, he does not know the history of the development of human society. He has not studied the place of the village community and its form of socialism in the long road which the state has traveled in order to arrive at freedom for the individual.

The self-educated man, full of the trend which the elementary school has given him, comes, perhaps, into the directorship over the entire education of a State. He signalizes his career by attacking the study of the classic languages, the study of logic and philosophy, the study of literature and the humanities. It is to be expected of him that he will prefer the dead results of education to an investigation of the total process of the evolution of human culture. The traditional course of study in the college takes the individual back to the Latin and Greek languages in order to give him a survey of the origins of his art and literature and science and jurisprudence. In the study of Greece and Rome he finds the embryology of modern civilization, and develops in his mind a power of discrimination in regard to elements which enter the concrete life of the present age. It is not to be expected that the commonplace mind, which is armed and equipped only with the methods of elementary instruction, shall understand the importance of seeing every institution, every custom, every statute in the light of its evolution.

Again, the force of these facts is augmented when we consider the enormous development of secondary instruction in this country, not on the basis of the university, but on that of the elementary school. Within one generation the public free high schools have increased from a hundred or less to five or six thousand. For the most part the course of study in these institutions has been largely under the control of men educated only in elementary methods. As might have been expected, this fact has largely determined the character of the studies pursued in the high schools. The classic studies and pure mathematics have been discouraged, and studies substituted for them which have a real or supposed value in the business vocation. The consequence of this has been that the high schools of the country have failed to fur-

nish men of real directive power. Their best representatives have been of the type of the self-educated men that I have just now described.

While I consider it a matter of congratulation that the people of the country are fast establishing throughout the land a system of free education in high schools, yet I find myself obliged to admit that the present and past results of these schools may be summed up as the production of a vast intellectual current of Philistinism. There is not any argument for the importance of university extension which equals this in strength. The secondary education has largely been diverted from the road that leads to higher education, and turned aside in such a manner as to produce arrested development at the stadium of elementary or secondary methods. The common schools of the people are suffering more from this cause than from all the other causes combined. It is a prolific source of mere mechanical device and methods which lead nowhither. It produces a flippant, self-conceited frame of mind which does not hesitate to attack and tear down institutions which it fails to comprehend. University extension, as we understand it, proposes to close up this gap between higher institutions and the elementary schools.

In recent years there has been a considerable elevation of the standard of admission to the college, and this has led to an increased development of secondary instruction, especially since the smaller colleges of the country have not been able to follow the lead of the great universities without suffering in the size of their classes. The influence of secondary schools as directors of elementary common schools is not, and never has been, a healthy one. Only the college and university can give this healthy influence.

With university extension the directors of higher education come at once into contact with the people. The university, through its properly organized faculties, descends into the community and, as it were, takes an inventory of the bright and promising minds that are exercising an intellectual influence upon the direction of affairs. It gathers these into classes and audiences, and discusses with them the living questions of the day. It fascinates them with the superiority of the comparative method of study. It vanquishes the spirit of Philistinism and refutes the theories of cranks.

This process of university extension, I need not add, has also a retroactive influence of great value upon the university itself. We all know how important is the present tendency toward specialization. We admit, nevertheless, that there is a danger in this, inasmuch as the specialist who does not use the highest or comparative method, and endeavors to bring his specialty into comparison with all branches of human knowledge—that this specialist, I say, tends to make his branch a hobby, and to set up his local center as the grand center of the universe. Unbalanced specialism in education, therefore, tends to the very evils which elementary methods produce. But university extension will correct this. When the specialist finds himself face to face with an audience collected from people who have received only a common education, he is forced at once into meeting their crude opinions by presenting the comparative history of his theme, and by showing the bearing of other branches of human learning upon it. It is, as I have said, the characteristic of university extension that it finds its highest principle in the conduct of life, and that it is ethical in its method. The direct contact of university instructors with the people leads to the emphasis of the ethical standpoint.

So much for the reaction of university extension upon the university itself. But I should not omit to say that the university extension movement will have another beneficial effect in increasing the number of persons who seek higher education. No sooner does the university enter the field of competition before the common people than it vanquishes the claimants for the cause of secondary education, and the claimants for the cause of elementary education as finalities. The people see at once the superiority of the higher education, and there arises throughout the community an aspiration for its advantages. Even the families of the poor will aspire each to educate one or more of their children for the university. We know that in former times, when the requirements for education had not climbed up to the place they now hold, how often the poorest families in Scotland managed to educate one of the family for the university. The ideal of education, at that time, was university education. This desirable ideal will again prevail in the community, and where we have at the present in the United States only one in five hundred of the population enrolled in schools for higher instruction we shall have, as we ought to have, from five to ten times that ratio.

Again, the advantage to the university will appear in the furnishing of direct practical careers to its graduates. In the laboratory and the seminarium the university trains its pupils to the work of original investigation. It sends, therefore, into the community a class of people fully equipped with an intellectual apparatus for the correction and perfection of the political and the economical departments. It focuses a powerful light upon the directive power in the various departments of productive industry and local self-government. Now, university extension, by reason of the fact that it collects into organized bodies the most enterprising minds of the common people, prepares positions in advance for these graduates of the university. They may take hold of the places where they are most needed without wasting their strength in endeavors to discover such opportunities, and to persuade men in power of the utility of their training for the work.

We have seen how this movement arose in England. With the extension of suffrage and with the increase of means of self-education among the people, and especially with the circulation of semi-scientific information by means of the printing press, there has been in the past a something of relaxation in the hold which the great universities had upon the people. This has been promoted by the self-educated man whom I have disparaged by calling him a Philistine. The great urban development of England, and, I may say, of all civilization, has produced in the community an aggregation of the weaklings of society—what we may call the population of the slums—a fearful problem for our civilization. It would have been the part of selfish wisdom to establish university extension in order to recover a hold upon the common people, and in order to grapple successfully with the social problem of the slum element which menaces the rule of law; but, strange to say, the university extension has not originated in the enlightened selfishness of the university, but rather in the pure missionary spirit, the spirit of divine charity which has always largely abounded among the directors of higher education. There is no movement, however, which has worked for the perpetuation of the power of the upper classes, and especially of the university-educated classes of Great Britain, as has this movement of university extension.

It is true that circumstances in this country differ from those in England in many particulars, but there are great broad lines of resemblance.

In both countries we have what is called local self-government. England is the nation in which local self-government has originated as a complemental element necessary to compensate for the one-sidedness of the Roman principle of centralization. In our Government, just as in the home government of England, there is a representation, not only of all individuals but of all interests, and this not only in the legislature that makes the law, but in the courts which administer the law, and in the executive department which enforces the law. The making of laws is determined by the free process of elections and public debates in which all powers and interests struggle for the mastery. The decisions of the courts are determined by the same universal representation of individuals and interests; and, finally, the enforcement of the laws concedes the same rights of consideration for all parties concretely existing in the community. It is evident that in England and in this country—both democratic—there exists a sort of necessity for a free process of influence between the highest and lowest strata of society. In both countries demagogism increases in proportion to the neglect of the lowest stratum by the highest. This argument for university extension is so obvious that it does not need further expansion here.

There is one incidental effect of university extension which I think worthy of special mention. The ordinary elementary school, secondary school, or college seeks to give a general education to the pupil. It wishes to see everyone learn the conventional course of study, and not neglect either language, or science, or mathematics, or history. This curriculum, in a certain sense, mistreats those especially gifted individuals, found in all ranks, who have possibilities of the greatest usefulness in certain narrow lines of talent, but who are not attracted by other fields of knowledge outside of their specialty. Their love of one particular branch of human knowledge is so great that all other branches seem to them repugnant. These persons are the stuff out of which genius is made, but our traditional system of education has not known what to do with the candidates for genius. But the new methods of specialization, which the university proper has taken up after the studies of college are completed, has opened up among our university educators an interest in special talent wherever it is found. University extension provides new channels of communication between the directors of the university and these specially endowed people, scattered here and there throughout the community. The lecturers and class teachers of the extension movement are prepared to make an inventory, as it were, of this very important, although not numerous, element in the population. This possibility of saving from waste some of the most gifted of people will occur to everyone as a strong reason for the existence of school and university extension.

The old lyceum course did not provide for the active participation of the audience in the work of instruction. But university extension provides for discussions between the lecturer and his classes. It provides for reviews, it provides for home studies and examinations.

In regard to the question of management in this great movement, I suppose that we shall have a full discussion of the question of local centers *versus* one all-including society. It seems to me that we should encourage local centers where there seems to be ambition and ability for successful organization. I think that this matter will take care of itself. The advantages of a great central organization are advantages of finance. There is saved a multiplication of offices and a multiplication of expense by cooperating in one great society. But where local

reasons exist for independent societies, let them continue. Let any State whose government provides money to manage university extension within its boundaries go on and solve its own problems. There are lines of new experiments needed in order to discover the best instrumentalities. The English have developed especially the lecture-course system, with its discussions and written examinations. In many parts of this country the system of home study and professional instruction by mail has been developed. There are very many other phases, such as, for example, that developed by the Brooklyn Institute, which ought to have full consideration. When we have developed a half-dozen types of university extension, each local center may adopt and combine three or four best adapted to it. In the meanwhile we must pay the well-deserved compliment to the American society, initiated by the University of Pennsylvania, to say that it has made by far the largest step in making a useful and practical application of university extension in this country; and all new movements in this direction should consider carefully the question whether something can not be gained by uniting with this great movement already so efficiently organized. Whatever may be the practical conclusion arrived at in regard to these matters of local and central administration, there certainly is but one possible conclusion as to the importance of a national conference with annual meetings for comparison of views. Each movement wishes to understand clearly the aggregate result of the experience of all movements. There should be a national conference, which brings out this experience in all its details, and serves it up for the instruction of all.

I congratulate you, delegates, on your undertaking, which is, in the broadest sense of the term, a missionary movement. It is a movement which holds out the torch of the highest learning, not only for the illumination of all, but for the purpose of assisting each individual to light his own torch at its sacred flame.

STATISTICS.

In order to ascertain what degree of development university extension has attained in this country, a statistical investigation was recently made by the Bureau, the results of which are here given as an appendix to the foregoing address.

The collection of statistics concerning university extension work is found to be a difficult matter, especially where the work is not conducted under the auspices of some educational institution. During the year 1891–'92 reports were received from 21 different institutions or societies who were engaged in this work. These agencies reported that there were delivered 319 courses of lectures, ranging in length from 1 to 75 lectures per course. The number of lectures in the several courses was as follows: Four courses of 1 lecture; 3 of 2 lectures; 11 of 3 lectures; 2 of 4 lectures; 8 of 5 lectures; 186 of 6 lectures; 6 of 7 lectures; 4 of 8 lectures; 2 of 9 lectures; 20 of 10 lectures; 64 of 12 lectures; 1 of 13 lectures; 2 of 15 lectures; 1 each of 20, 30, 42, and 75 lectures; and 1 course in which the number of lectures was not reported. These courses were delivered in 159 different cities scattered throughout the country, from Maine to California and from Minnesota to Louisiana. The aggregate average attendance on these courses was 47,613, with the attendance at 14 courses not given.

The number of lectures by subjects was as follows: English literature, 69; American literature, 5; German literature, 1; Scandinavian literature, 2; political or social science, 41; poets or poetry, 20; prose, 2; modern novelists, 3; history, 58; government, 7; evolution, 2; elocution, 1; natural, physical, or mathematical science, 85; Shakespeare, 11; psychology, 5; ethics, 1; art, 1; French drama, 1; Roman law, 1; Roman antiquities, 1; English grammar, 1; subject not given, 1.

Undoubtedly there were delivered other courses of lectures of which this office has no information. Besides this work of university extension large opportunities for study by teachers and others are given by universities and colleges in what are known as summer schools. Through the agency of these schools the valuable libraries and

CHAPTER XXII.

THE RELATION OF THE INDEPENDENT COLLEGES TO THE SYSTEM OF STATE SCHOOLS.

One of the best plans for the union of the separate colleges of a State into a State university is that proposed by Dr. S. S. Laws, formerly president of the University of the State of Missouri, and at present Perkins professor of Natural Science in connection with Revelation and Christian Apologetics, in the Presbyterian Theological Seminary of Columbia, S. C. He proposes a federation, under the leadership of the university, of the institutions of a State doing college academic work providing for examinations that will entitle to the B. A. degree of the State university. Under such a plan as this, for example, the many excellent colleges scattered over the State of Ohio might be united under a federated board as the State University of Ohio, and agree upon a curriculum and upon examination papers that could be used in the several institutions simultaneously. The candidates who pass successfully the prescribed examination would be entitled to the degree conferred by the State university. This plan of Dr. Laws seems to offer promise of fruitful results in the consolidation of the colleges of a State. It would increase the value of the degree without in any way encroaching on the local independence of the several institutions.

This project was enunciated by Dr. Laws in the course of a discussion of a paper read before the Missouri State Teachers' Association, Jefferson City, December 28, 1876, by President Morrison, of Drury College, Springfield, Mo., on "The relation of the independent college to the system of State schools." Dr. Laws, being called on, responded by putting forward the following *novel plan of State school federation:*

"Mr. PRESIDENT: I wish to make two remarks, and the first one has reference to the frequent allusions to the German University. I could name books that have been written by gentlemen from the German universities, which contain strictures and suggestions liable to mislead the public mind, and which, in fact, have misled it. I was seriously misled upon a particular point as to the relation of the German to the American university.

"The American university is not like the German university, and the exact point of difference is this: That in our American university the academic course is the nucleus around which all else clusters. It is the central point of development and of organization. But the German university has no undergraduate course. This course is taught in the gymnasium, and it would be necessary to take up the German gymnasium bodily and plant it down in the midst of a German university to establish this vital point of the analogy.

"But this would explode the German system, as it now stands.

"Bating some irregularities and exceptions, the German university matriculates only college graduates. Hence, the discipline of the members of the university community is that of professional schools with us. The gymnasia, which correspond to our colleges and to the academic departments of our universities, have a discipline quite as rigid as the strictest of our undergraduate courses. The lectures so often given us respecting our university discipline are utterly impertinent, for a young man has to graduate at the gymnasium before he is regularly admitted to the university in Germany. The faculty in philosophy in the German university does not do undergraduate but post-graduate work in the line of various specialties, and so of the other faculties.

"Moreover, American boys, or men, carry away the degrees of German universities upon other conditions than the native youth. The reason is that the

German universities are in the line of the civil service. For a native German to gain a position at the law, or in medicine, or as an ecclesiastic, his university degree is indispensable. But to our American youth the degree has no such use, and may mean almost nothing at all in Germany.

"The gymnasium corresponds to our college or academic department, being perhaps more thorough in the classics but less complete than our best colleges in the sciences.

"The American University came originally from England. It is still trammoled by some miserable monastic features of the Middle Ages, among which may be instanced the dormitory system. It is an unmitigated evil for the youth to be isolated from the domestic influences of the family circle during the formative period of college life. This antique patch upon our garments at the University of Missouri I hope to see fall not only into discredit, but into entire desuetude. Ours is a humdrum American university, of which the academic department is crowned by the degree of Bachelor of Arts. There are other equivalent courses. And then we have the professional schools of normal instruction, agriculture, law, and medicine; in fact, at present the institution consists of a group of associated and cooperative academic and professional schools, each having its head-center. The classical curriculum has received various modifications in our American institutions, but nevertheless it runs through our educational system throughout the land like a golden thread. Our unique American university is, in my opinion, better for us than the German article. There is not now in the Missouri University any preparatory department. The rabble that bore that name has been dispersed, and the work of the English and normal schools has been thereby relieved from incongruities. Preparatory or subfreshman work is done by each academic school for itself and in its own classes.

"2. The second thing on my mind when I rose to speak, Mr. President, was the relation of the university to the various denominational or independent colleges of this State. There are only about eight or ten of them, and without exception they all are feeble and struggling for continued existence.

"About the time of returning to this State I met with one of the most distinguished men of the East. In a conversation he said to me, 'Laws, one thing you will have to do is to kill off those little colleges and have one great institution.' I said, Mr. President, there are two very strong reasons in my mind why I should not commit myself to such a course of action. The first is, that these denominational colleges won't be killed off, and a man undertaking to engage in practical work must not disregard what is practicable. They have a tenacity of life which a man who attempts to overthrow them will find, perhaps, is equal if not superior to his own.

"The second reason that I gave him was, that they not only insist on living, but that they have a title to life which goes back to the very foundations of our American civilization; from that time until now religious bodies have acted a leading part in our work of education.

"It is also true that these private schools are doing a good work, entitled to be recognized, and which, without their action, would be left undone.

"With reference to our present posture at the Missouri University, I happen to know some things of value by an experience in this State in former years. I once felt the stinging of a lash wielded by a vigorous hand in the position in which I now happen to be. I was sensitive, being connected with an independent college, to anything that seemed to disparage the independent schools, and to claim for the university what I did not feel called upon to accord to it on the score of merit or of pretension. The idea has been more or less current hitherto that the private colleges are to be treated as inferior and tributary to the university. There is a serious error committed at this point, which has ministered to ill feeling and confusion in the State of Missouri.

"As I have just explained, in the Missouri University, as in most of our American universities, the academic department is the nucleus, the fundamental part of the university.

"Now, take the academic part of the university and bring it into comparison with these private colleges and it is on a dead level with them. This assertion of superior claims over them in the teaching of the academic curriculum is not well founded, and is consequently offensive because unjust. The academic department of the university is simply a college, and it has identically the same course of study that is pursued in these private colleges. Where is the superiority? It may be in pretension but not in fact, for the actual work done in certain lines is done by some of them as well as it is done in the university college, and in some things perhaps better. The university and colleges should occupy

the same position of equality as coworkers in the same field, and engaged in the same general work, so that the academical department of the university should not pretend to superiority except so far as by common consent conceded.

"What I have in mind, and will now express, is something to which I ask the attention of all co-workers in this State.

"Why should not our academic faculty of the university and the academic faculty of each of the denominational colleges throughout the State meet together on equal footing and effect a literary confederation? To take a single department as a means of illustration: Let all the professors of mathematics constitute a board on the mathematical studies; let them determine upon their curriculum, having a margin of equivalence, so that a certain flexibility of cooperation would be practicable. There would then be a certain freedom exercised, on the part of each professor, in leading classes over the work agreed upon in the mathematical course to be pursued in all our colleges. The other departments could be arranged in exactly the same way. There is no need of repetition. One department serves as an example for all.

"When the candidates for graduation of the several colleges are to pass their examination, let them go before a committee of examiners for each department, to be appointed by these boards, made up of the professors of the several departments. Let all of the candidates pass through the examination papers, so that their examination will be exactly the same; and then all the students from these institutions united in this literary confederation who pass the prescribed examinations will be graduated; and let this be the form, for example: A William Jewell College graduate of the University of the State of Missouri, or a Westminster College graduate of the University of the State of Missouri. And so of the others. There is nothing empirical in this. The only novelty is in the application of a tested principle. This is precisely what has been done in the universities of England for ages. Take Oxford, for example. There are associated there over twenty different institutions, each having its separate organization, its own faculty, government, and tutorial arrangements. If a student has passed, and is successful in his examination, if from Baliol College he becomes a Baliol College graduate of the University of Oxford. The graduate of the individual college thus becomes the graduate of the university.

"It seems to me, therefore, that the academic or collegiate department of the State University might be brought into cooperation with the private institutions, and these several institutions share in the influence and in the honors of the Central State University; and then we would have what I would term the Missouri system. It would not be empirical, but in its principle rest upon the experience of ages.

"We do not need or desire any legislation about it. It is a literary confederation that is alone competent to meet the exigencies of the case.

"In proposing and urging this scheme, we stand upon the just and proper ground that the Commonwealth of Missouri is utterly indifferent where the individual is educated within the State, provided the education received is a good one, qualifying properly for the duties of citizenship. It is the province of the State, to provide the sort of education which her youth should have in the present age, as fairly judged by the opportunities and responsibilities of the present and the future. And then, if the private colleges do not come up to this standard, the university is open and ready to receive them. It seems to me that we have here the true principle upon which our whole educational work should be conducted.

"There are several advantages which this literary confederation and cooperation, as explained, would bring to us.

"First. It would establish a standard of education, so that those institutions that pretend to be colleges, and do not do college work, would at once lose caste and drop out of the misplaced confidence of the public. Let them pass our examinations, or they will reveal their true character by their fruits. It will give a distinct place to those institutions as doing secondary work, and it will stimulate the real colleges to higher efforts. We have, then, an organizing and systematizing influence at once flowing from such an arrangement.

"Second. This literary federation and cooperation will tend largely to increase the spirit of education in the State. This is of primary importance; for if we can arouse the spirit of education, all will share in the shower. Were the public fully awakened on this supremely important subject, the existing educational appliances in the State, run to their fullest capacity, would be inadequate. Our first interest is to bring more power into action through existing plants.

"It seems to me, therefore, that by breaking down this indifference to the work of education it will be strengthened in all its departments.

"I feel an interest in this as a member of the State Teachers' Association, and it seems to be something which we ought to attain.

"I expect to take active steps to secure a convention of those connected with private colleges, that we may have a fair and full consultation over the general scheme now indicated. I now bespeak your favorable attention to it.

"It is believed that cooperation and confederation can be attained; and if we can attain it we have laid the foundation for a good work.

"Third. It will not in the slightest unfavorably affect the patronage that these private institutions enjoy, but it will the more firmly fix them in the public confidence and improve their literary features. They will still have the distinctive features belonging to them as the private colleges of different bodies. We weaken nothing; we strengthen everything. Hence there is no good reason for isolation or opposition. If anyone does not wish to join with us, there is no quarrel. Less than the whole can enter into this confederation to make trial of its virtues.

"Fourth. It is another point of advantage that this arrangement seems to offer the encouragement and hope of a complete organization of our educational work in the State, for that organization will not be complete till the private and the public schools are all made interdependent and cooperative in some such way as that now indicated.

"Every educational enterprise or organization, whether public or private, should realize that it is but a section of the great army battling for truth and light, and showing no quarter to ignorance, superstition, falsehood, and bad morals."

CHAPTER XXIII.

RENSSELAER POLYTECHNIC INSTITUTE.

The Rensselaer Polytechnic Institute is located at Troy, N. Y. It was founded under the name of the Rensselaer School in the year 1824 by the Hon. Stephen Van Rensselaer, of Albany, N. Y. In a letter dated November 25, 1824, to the Rev. Dr. Blatchford, who was the first president, the founder appointed the first board of trustees and enunciated certain articles for the temporary government of the school. At the same time he made Amos Eaton, of Troy, senior professor. The first meeting of the board of trustees was held December 29, 1824, and the school was opened January 5, 1825. An act of incorporation was passed by the Legislature March 21, 1826.

The institution was established as a school of practical science. In the letter referred to above the founder makes the following statement in relation to its character:

"I have established a school in the north end of Troy for the purpose of instructing persons who may choose to apply themselves in the application of science to the common purposes of life. My principal object is to qualify teachers for instructing sons and daughters of farmers and mechanics, by lectures or otherwise, on the application of experimental chemistry, philosophy, and natural history to agriculture, domestic economy, the arts, and manufactures."

The intention of the authorities at that time is further shown by quotations from a circular dated September 14, 1826, which was signed by the president and to which the names of the trustees and faculty are attached. It was issued to describe an extension of the course, and is entitled "Preparation branch recently established at Rensselaer School." The curriculum of the "preparation branch" is given in detail, and the object of the school is also stated. This is believed to be the first prospectus of a school of science ever issued in the English language. From it we learn that "the Rensselaer School was founded by the Hon. Stephen Van Rensselaer, solely for the purpose of affording an opportunity to the farmer, the mechanic, the clergyman, the lawyer, the physician, the merchant, and, in short, to the man of business or of leisure, of any calling whatever, to become practically scientific. Though the branches which are not taught here are held in high estimation, it is believed that a school attempting everything makes proficient in nothing. The Rensselaer School, therefore, is limited to an experimental course in the natural sciences. The studies of the preparation branch are extended no farther than is necessary, as auxiliaries to the experimental course."

"The original method of instruction which has produced such unexpected results, called the Rensselaer method, will be extended to this branch, to-wit, that of exercising the student, on the forenoon of each day, by causing him to give an extemporaneous dissertation or lecture on the subject of his course, from concise written memoranda, and to spend the afternoon in scholastic amusements."

Among the subjects taught in the preparation branch were botany, practical mathematics, logic, rhetoric, and history, and the "scholastic amusements" included the collection and preservation of minerals, plants, and insects, the use of the microscope, drawings of the internal structure of plants, making globes of plaster of Paris and drawing maps upon them, land surveying, taking the latitude, simple hydraulic experiments, experimenting with gases, making and using galvanic batteries and magnets, constructing and using thermometers and hygrometers, taking specific gravities, etc. The circulars also contain, among other curious and interesting information, statements of the cost of tuition and of living. The success of the school in its early days was largely due to the remarkable powers as a teacher of its first senior professor, Amos Eaton. He introduced the methods of instruction outlined above, and many of his pupils who

[1] The following sketch of the history and organization of the oldest polytechnic institute in the United States has been prepared by Mr. Palmer C. Ricketts, C. E., the director of that institute, at the request of the Commissioner.

have since become eminent as scientific teachers and investigators bear testimony to the peculiar value of his teaching. He was not only successful as a teacher, but was well known as a popular scientific lecturer and as an investigator. The various editions of his text books on botany, zoology, chemistry, geology, and surveying amount in all to about forty publications.

In 1832 by an act of the legislature the name of the institution was changed from the Rensselaer School to the Rensselaer Institute, and by an act passed in 1833 the trustees were empowered to establish a department of mathematical arts, for the purpose of giving instruction in engineering and technology. This meant the establishment of a course in civil engineering. Although the inclusion among the duties of the senior professor, in the first triennal catalogue published in 1828, of lectures on civil engineering is significant of the enlightened views of the founder and officers of instruction, the institution had been to this time a school of natural science, its graduates receiving the degree A. B. (r. s.). It is to be remembered that at this time there were in this country hardly any engineers other than military engineers. The term civil engineer had scarcely been coined. The Erie Canal had only been begun in 1817, and the first short piece of railroad was opened in 1830.

Eight members of the class of 1835 were graduated as civil engineers and received the degree of C. E. This was the first class in civil engineering ever graduated in any English-speaking country. A circular entitled "Notices of Rensselaer Institute," and dated October 14, 1835, gives the curriculum for students of civil engineering as well as for those of natural science. It is interesting, not only because it is the first prospectus of a school of engineering issued in English, but because it adds to our information of the state of applied science in this country at that date. Extracts from it given below show the courses in natural science and engineering:

Students of the Natural Science Department are instructed as follows:

Three weeks, wholly practical botany, with specimens.

Four weeks, zoölogy, including organic remains, and physiology, including the elements of organic chemistry.

Three and a half weeks, geology and mineralogy, with specimens.

Three weeks, traveling between Connecticut River and Schoharie Kill, for making collections to be preserved by each student and exhibited at examinations; also for improving in the knowledge of natural history and mathematical arts.

Ten weeks, chemistry and natural philosophy.

Half a week, preparing for examination and commencement.

The afternoons of all fair days are devoted to surveying, engineering, and various mathematical arts; also to mineralizing, botanizing, and to collecting and preserving subjects in zoölogy.

Students of the engineer corps are instructed as follows:

Eight weeks in learning the uses of instruments: as compass, chain, scale, protractor, dividers, level, quadrant, sextant, barometer, hydrometer, pluviometer, thermometer, telescope, microscope, etc., with their applications to surveying, protracting, leveling, calculating excavations and embankments, taking heights and distances, specific gravity and weights of liquids, degrees of moisture, storms, temperature, latitude, and longitude by lunar observations and eclipses.

Eight weeks, mechanical powers, circles, conic sections, construction of bridges, arches, piers, railroads, canals, running circles for railways, correcting the errors of long levels caused by refraction and the earth's convexity, calculating the height of the atmosphere by twilight and its whole weight on any given portion of the earth, its pressure on hills and in valleys as affecting the height for fixing the lower valve of a pump; in calculating the moon's distance by its horizontal parallax, and the distance of planets by proportionals of cubes of times to squares of distances.

Four weeks, in calculating the quantity of water per second, etc., supplied by streams as feeders for canals or for turning machinery; in calculating the velocity and quantity effused per second, etc., from flumes and various vessels, under various heads; the result of various accelerating and retarding forces of water flowing in open raceways and pipes of waterworks, and in numerous miscellaneous calculations respecting hydrostatics and hydrodynamics.

Four weeks, study the effect of steam and inspect its various applications—inspect the principal mills, factories, and other machinery or works which come within the province of mathematical arts; also, study as much geology as may be required for judging of rocks and earth concerned in construction.

The requirements for degrees were as follows:

The Rensselaer degree of bachelor of natural science is conferred on all qualified persons of 17 years and upwards.

The Rensselaer degree of civil engineer is conferred on candidates of 17 years and upwards who are qualified in that department.

One year is sufficient for obtaining the Rensselaer degree of bachelor of natural science or of civil engineer for a candidate who is well prepared to enter. Graduates of colleges may succeed by close application during the twenty-four weeks in the summer term.

The degree of master of arts is conferred after two years of practical application.

Prof. Amos Eaton died in 1842, and George H. Cook, of the class of 1839, who was afterwards widely known for his work as State geologist of New Jersey, was appointed senior professor in the same year.

Under his direction the school was reorganized and the courses of instruction somewhat extended. He resigned in 1847, and was succeeded by B. Franklin

SCHEDULE OF THE COURSE IN NATURAL SCIENCE.

The studies of the course in natural science are identical with those in civil engineering during the first two years.

THIRD YEAR.

First term.

Calculus; electricity and magnetism; mineralogy, petrography; map drawing; chemistry, qualitative analysis, elementary quantitative analysis.

Second term.

Astronomy; geology, lithology; histology; chemistry, organic, blow-pipe analysis, assaying.

A thesis must be written during the summer vacation.

FOURTH YEAR.

First term.

Metallurgy, general metallurgy, iron metallurgy; chemistry, quantitative analysis, analysis of commercial and industrial products; physical laboratory work.

Second term.

Physical laboratory work; paleontology; mineralogy, determinative; petrograph; chemistry, quantitative analysis, volumetric and gravimetric analysis; law of contracts.

A graduating thesis must be presented.

Mathematics and astronomy.—The aim of the department is to give each student a thorough working knowledge of the several subjects taught. The courses are made to bear as directly as possible upon the training of the engineer. During the first year thorough instruction is given in solid geometry, higher algebra, and trigonometry. These are followed by analytical geometry and differential calculus in the second year, and by integral calculus in the third. Lectures on the theory and various forms of the slide rule are also delivered. In all these subjects examples of a practical nature are constantly given. The text-books used are supplemented by notes prepared by the instructors.

A course in descriptive astronomy is given in the third year, and that in spherical and practical astronomy in the fourth. In the latter are considered the adjustment and use of portable instruments, correction of observations, determination of time, latitude, longitude, and the meridian, the method of least squares and similar subjects. The theory is supplemented by work in the observatory, where the use of the sextant, chronograph, transit instrument, etc., is taught.

Descriptive geometry and stereotomy.—In this department careful and thorough instruction is given in freehand drawing, lettering, the use of drawing instruments, tinting, shading, isometric and orthographic projections, tracing and making blue prints, the theory and practice of shades, shadows, and perspective, machine construction and drawing, including gearing and the slide valve, and stonecutting.

In all these subjects a great amount of time is spent in the drawing-room under the immediate supervision of the instructor, and original work sufficient to fix the principles is required. In descriptive geometry, for instance, although a lesson is assigned for each day from the text-book the student is seldom given a problem found there, but is required to prove an original one illustrating the same principles. Besides the drawing required in the course in stonecutting, plaster of Paris models of arches, stairways, etc., are constructed by the students.

Chemistry.—The course in chemistry, which is obligatory for all students, consists of daily lectures, during the last part of the second year, upon general inorganic chemistry. These are accompanied by daily recitations, including the solution of chemical problems.

The course in qualitative analysis extends over the first half of the third year, with laboratory work five days in each week. During this course the student acquires ability to analytically examine all the ordinary materials likely to be presented to his attention during his professional engineering practice. He is, as far as possible, given charge of outside questions which come to the laboratory for solution. Blow-pipe analysis and assaying extend over part of the second term of the third year, particular attention being given to the assay of gold and silver and to the recognition of such ores of the heavy metals as may be met with in the mining regions of this country.

Quantitative analysis and organic chemistry are not given to candidates for the degree of civil engineer. Courses in these subjects are given to candidates for the degree of bachelor of science, to post graduates, and to special students. Very complete arrangements make these courses especially thorough.

Mineralogy, geology, and metallurgy.—These subjects are taught by means of lectures and recitations. An unusually fine collection of rocks, minerals, and designs for iron and steel works add greatly to the value of the courses.

Physics.—The course of physics begins in the last term of the first year with the mechanics of solids, liquids, and gases, and acoustics. Optics and heat are studied during the first term of the second year, and electricity and magnetism during the first term of the third year. These subjects are developed by daily lectures. The student uses a text-book, and is held strictly accountable for an exact knowledge of its contents, but much instruction is given additionally in the lectures, accompanied with full experimental illustrations. He is required to take notes during the course of the lectures and to copy others which have been put upon the blackboards. In the course of daily recitations problems are frequently assigned, and upon these as well as on demonstrations of theory the student is required to give both oral and written explanations. During the first term of the second year a course of laboratory work is conducted in which the student is introduced to the methods of quantitative measurement, and he thus acquires some familiarity with the use of physical instruments. For each exercise due preparation is made by appropriate reading, and a report is written which is examined by the instructor. During the first and second terms of the fourth year laboratory practice is continued, prominence being given to methods in electrical and magnetic measurement.

During the second term of the fourth year a course in thermo-dynamics is given and this is followed by lectures on the elements of electrical engineering as an accompaniment to the laboratory work in electrical measurement.

Surveying.—The student begins the work in surveying during his first year at the institute. In the second term of this year he is taught the use of the chain, tape, and compass. He also makes a compass survey of a small piece of land which is mapped and the area computed.

In the second year the construction and use of all modern surveying instruments, including transit, level, solar compass and attachment, clinometer, hand level, aneroid barometer, planimeter, etc., are taught in the class room, as are also the various methods in modern use of making land, topographical, hydrographical, mine, and city surveys. In topographical surveying, while all methods are taught and the conditions rendering one method more suitable than another, particular attention is paid to the transit and stadia, and the students become thoroughly familiar with this most generally suitable method. During the first term daily practice in the adjustment and use of the various instruments before enumerated is given. Surveys of limited extent are executed, a meridian is established with the solar compass, checked by stellar observations, and the magnetic declination of the needle determined.

At the close of the year the class is taken into the field for four weeks, and makes a complete topographical survey of an area selected with reference to the diversity of problems it presents. This survey is also made to include hydrographic work, as the portion of the stream within the area chosen for work is mapped from soundings and its flow determined.

Geodesy.—Besides the course in astronomy, in which the students are taught to determine latitude, longitude, time, etc., from observations on the heavenly bodies, a brief course in geodetic surveying is given in the third year. The work includes the methods of measuring base lines, field work of triangulation, adjustment of triangles and quadrilaterals and a discussion of the figure of the earth.

Highway engineering.—During the third year there is given a course in highway engineering, in which is discussed the location, construction, and maintenance of country roads and city streets, the advantages and disadvantages of the various paving materials and specifications for each, and a study is made of the various road laws in force and their adequacy. A special course of fifteen lectures on the construction and maintenance of country roads is offered to persons of mature years and is designed for road overseers and others having to do with this class of work.

Railroad engineering.—The subject of railroad engineering is begun in the third year with a theoretical course in railroad curves, turnouts, and minor structures, and the staking out and computation of railway earthwork. The course also includes a discussion of the method of making railway location surveys, and a contour map is furnished the student on which he projects a location line and makes an estimate of materials and cost. This theoretical course is followed at the close of the year by four weeks of field practice in railroad surveying, during which a preliminary survey is made and mapped, a location projected and run in, the work staked out, quantities computed, and cost estimated. A line from 3 to 8 miles in length is usually located, and through the courtesy of railroad officials interested in the institute, the classes not infrequently have

an actually contemplated line to examine, which secures an interest and faithfulness not always obtained on a mere "practice" line.

In the fourth year the subject generally known as Economic Theory of Railroad Location, embracing the items of train resistance and the effect of grades, curves, and length of line on operation is thoroughly studied, together with the correlative subjects of economic construction, maintenance of way, etc. Numerous problems are given to illustrate the subject, and a short thesis, comparing two or more possible locations for a line, the data for which are given, is written. The students also discuss in the light of the new knowledge the location made the previous year. In addition to the above, there is given in the fourth year a comprehensive series of lectures on railway signals, embracing the construction and operation of block signals and interlocking signals for yards, crossings, etc.

Summer courses.—It is believed that the summer courses in surveying in the second and third years are particularly valuable, on account of the continuous and practical character of the work. The student is employed all day for six days in the week, and the methods used both in the topographical and railroad surveys embody the latest modern practice. The work is usually located in the Adirondack foothills, and forms the most enjoyable and healthful as well as valuable portion of the surveying instruction. These courses are open to a limited number of special students who show themselves competent to perform the work.

Topographical drawing.—Topographical drawing is taught in the first, second, and third years of the course. In the first year the student learns to make the various topographical symbols, both in pen and ink and in color. In the second year, in connection with the course in surveying, he maps small areas from notes furnished him, measures and computes the areas and draws contours, projects grades, and computes volumes of earthwork involved in surface grading. He also makes a skeleton map of the summer survey. In the third year he completes this map and also makes in the field the map of the railroad survey. The use of the planimeter and the various diagrams for estimating areas and earthwork are taught.

Rational mechanics.—At the conclusion of the course in Integral Calculus during the first term of the third year instruction in Rational Mechanics begins. In this course, which extends over a part of two terms, with recitations and lectures every day, the fundamental theoretic principles of statics, cinematics and dynamics which underlie and form the foundation of all branches of engineering are taught. The higher treatises and text books supplemented by notes are used. The method of instruction, which applies as well to the technical subjects in the department of mechanics as to the rational, is as follows: The class is divided into sections and each section, after a combined lecture and thorough interrogation by the professor in charge, goes to the assistant for a recitation on certain selected parts of the subject. The assistant requires each student each day to put one of these articles on the blackboard and explain it. During this explanation he is interrogated upon the principles involved.

Structures.—The theory of structures is taught during the last term of the third year. This includes the equilibrum and stability of frames, chords, arches, buttresses, chimneys, abutments, piers, retaining walls, dams, etc. Analytical and graphical methods of treatment are elaborated. A treatise on masonry construction is also used as a text-book, and the strength, properties, and cost of cement, mortar, concrete, brick, and stone masonry, together with all the more important kinds of foundations, are considered.

Resistance of materials.—The elasticity and resistance of the materials of engineering are considered during the first term of the fourth year. The fundamental equations of the theory of flexure are first determined and applied to a consideration of the strength of simply supported and continuous beams and of columns. Practical formulæ for the strength of beams are determined, and the right line long column formula and those of Gordon and Euler are deduced. Attention is also paid to the graphical representation of the strength of columns. Theoretical formulæ for torsion are developed and applied to a consideration of the strength of shafting. The design of riveted joints for boiler and tube work is taken up and the proper size and pitch of rivets determined.

In the practical part of the subject the coefficient of elasticity, elastic limit, ultimate resistance, and other properties of cast and wrought iron, malleableized iron, steel, bronze, copper, and other metals in tension, compression, and shear are studied, and the students are required to make experiments on the testing machine and determine their properties as above outlined. The value

of wood, stone, brick, etc., for use as materials of engineering is investigated, and each student also determines the strength of cement by the use of a cement-testing machine. Attention is paid to the fracture and appearance of metals, and also to the effect of repetition and reversal of stress.

Bridges and roofs.—The course on bridges and roofs is given in the first and second terms of the fourth year. The first part is devoted to the theory of stresses. In this the student becomes familiar with the calculation of stresses in plate girders, in Howe, Pratt, Whipple, and lattice bridges, and in trusses with curved chords; also in cantilever, suspension, and draw bridges, and in various kind of roof trusses. Analytical and graphical methods and the method of wheel concentrations and of panel loads are used. Details and connections are carefully considered and studied from the very large collection of blue prints of existing structures of all kinds in possession of the institute. A set of bridge specifications forms a part of the course upon which recitations are required, and hand-books of bridge and iron works are used for reference. During this course the class is taken out for an examination and comparison of various styles of bridges in the vicinity, and a bridge shop is also visited and the machines and methods of manufacture explained.

The second part of the course in the second term is taken up with the design of bridges and parts of bridges. The student makes all the calculations and complete shop drawings of the work in hand, each bridge being different from the others, and tracings and blue prints are finally made. It is thus seen that the course is thoroughly practical in its character.

Hydraulics and hydraulic motors.—This subject is taught in the fourth year. It includes hydrology, hydrostatics, theoretical hydraulics, the flow of water through orifices, over weirs and dams, through tubes and pipes, and in conduits, canals, and rivers, the measurement and cost of water power, the dynamic pressure of flowing water, hydraulic motors, and the general principles of naval hydromechanics. Numerous examples illustrating the principles are given. In the direction of water-supply engineering there are considered general rainfall statistics, precipitation, evaporation, the collection and storage of water, and its impurities; the practical construction of waterworks, including reservoir embankments, waste weirs, partition walls, conduits, distributing systems, and the various methods of filtering. The delivery of water by pumps is here touched upon, though this matter is more thoroughly treated in the course on the steam engine. The theory and efficiency of the various forms of water wheels are investigated and the students are instructed with regard to the different kinds of turbines, with their draft tubes, diffusers, and governors.

They are required to measure the flow of adjacent streams by means of weirs, and thus practically to find the discharge. Practice in the measurement of the velocity of streams by means of current motors and floats is also given, and models of valves, motors, practical working turbines, etc., add value to the instruction. The subject of aërodynamics is also taken up in this course and the flow of air through orifices, and in pipes, blowing engines, the relations between the velocity and pressure of the wind, anemometers, windmills, etc., are studied.

Sewerage systems.—The design of sewerage systems is taken up in the fourth year. A comparison of the cost and efficiency of the different systems is made and the conditions under which each should be used explained. The various methods of sewage disposal are exemplified and their efficiency discussed. The effect of the surface and magnitude of area drained in connection with the maximum rainfall is considered, and main and branch sewers for the separate and combined systems are proportioned and their cost determined. The materials of construction, foundations required, methods of laying, and descriptions of details, such as branches, manholes, catch-basins, etc., are also given.

Steam engineering.—The course in steam engineering is given during the last term of the fourth year. It consists of a series of lectures by a well-known consulting mechanical engineer. The properties of steam are first elaborated, and afterwards the details and construction of the various engines and boilers in ordinary use considered. The strength of their parts are calculated and their general operation explained. The course also includes pumping machinery. The lectures are illustrated by drawings, photographs, and hand-books, and books of reference are used for consultation. Each student makes a general design for a locomotive, pumping, marine, or other form of engine, though detailed drawings are not expected. He is also required to take indicator diagrams from some engine and determine from them its power. Examinations of various forms of steam engines in the vicinity are also made under the direction of the instructor.

Theses.—A thesis on some technical subject must be written by each student during each summer vacation.

A graduating thesis, which must be either a review of, or a design for, a machine, structure, plant, system, or process belonging to a department of scientific or practical technics is also required.

Degrees conferred.—The annual register of the institute for 1893 contains the following clauses in relation to the conferring of degrees:

The institute will confer the degree of civil engineer or of bachelor of science upon all its future graduates who shall have completed the course leading to such degrees, or to either of them.

(1) The candidate must have sustained a satisfactory examination in all the studies of the course in civil engineering or in that leading to the degree of bachelor of science:

(2) His thesis must have been approved by the faculty.

(3) He must have paid all dues to the institute.

(4) He must be of good moral character.

Buildings and property.—The institute has at present six buildings in use for purposes of instruction: the main building, the Winslow Laboratory, the Ranken House, the Astronomical Observatory, the Gymnasium, and the Alumni Building.

The main building is 115 feet in length, 50 feet in breadth, and four stories in height. It contains lecture and recitation rooms, drawing rooms, and the laboratories of the Department of Physics. The main hall of the institution, where the reading of theses takes place, is also in this building.

The Winslow Laboratory is 77 feet long, 45 feet wide, and three stories high. It is devoted to the Department of Chemistry. The first story contains rooms for quantitative analysis and special investigations, and also furnaces for the work in assaying. The second story contains the general laboratory for qualitative analysis and rooms for chemical balances and for the instructor in charge. The third story contains the general lecture hall, a recitation room, a room for the apparatus used in the lectures on general chemistry, and an office for the use of the instructors in the department: In this room there is a carefully selected special chemical library.

The William Proudfit Observatory is an astronomical observatory, consisting of a central part 40 feet square, with north, south, and east wings. It is 70 feet long and 60 feet in depth. It is well equipped with instruments for use in engineering instruction, containing a transit instrument, chromometer, chronograph, clocks, and sextant.

The Ranken House is 40 feet square and two stories in height. It is used as a mechanical laboratory, and contains machines for the testing of the various metals and of cement, stone, wood, etc.

The Gymnasium is 80 feet wide and two stories high. The first story contains bowling alleys, sponge and shower baths, a dressing room, and a reception room. The whole of the second story, 30 feet in height is taken up by the gymnasium proper, which has a gallery with a racing track and is fitted up with the best patterns of Dr. Sargent's gymnastic apparatus.

The Alumni Building is about 50 feet square and three stories in height. It is fireproof throughout, having concrete floors and brick partition walls. The first floor contains a library, a room for the trustees and the transaction of general executive business, and one for the office of the director. The second and third floors contain the geological, mineralogical, and general natural history collections. There is also a lecture room for the professor of geology on the second floor.

The Library.—The library, located on the first floor of the new fireproof Alumni Building, is strictly technical in its character. It consists of about 5,000 volumes and a large number of pamphlets and maps, and consists of many valuable scientific works, including the publications of foreign and American societies, and bound volumes of various technical journals. The professional library of the late Alexander L. Holley was bequeathed by him to the institution and forms a part of its collection. The books and pamphlets are accessible to all members of the institute, and the reading room attached contains the current numbers of all the more valuable scientific publications of this and other countries.

Instruments and apparatus.—The institution possesses valuable collections of drawings, models, instruments, and machines for purposes of illustration and instruction in its various departments. The total value of its property is estimated at $350,000.

Importance of the school.—The importance of this institution in the educational history of the country is well known. This is due not only to the methods of instruction and the high standard of scholarship required, but also to the splendid work of its graduates as engineers and teachers of science. In a pamphlet published in 1892, entitled, A Partial Record of the Work of Graduates of the Rensselaer Polytechnic Institute, are given the names of 33 presidents, 121 vice-presidents, managers, and superintendents, and 69 chief engineers of railroad companies, steel and iron works, bridge companies, waterworks, electric companies, mining companies, sewerage systems, canals, etc., who have graduated at the school; also of 5 State geologists and 56 professors who have been connected with most of the great educational institutions of the country.

The pamphlet also shows that the graduates of the school have been connected as designers and constructors with nearly all the larger bridge companies and great bridges in the country, and that they have in responsible positions helped to build and equip 109,000 miles of the railroad systems of North America, beside many miles in other quarters of the globe. One hundred and ninety of the graduates of the school have become members of the American Society of Civil Engineers. It received at the Paris Exposition of 1889 the only grand prize given to engineering schools of the United States.

That it is widely known as a school of science may be inferred from the residences of its students, who have come from all parts of the world.

Number and distribution of graduates.—Including the class of 1893 there have been 1,093 graduates, of whom 837 are alive and 256 are dead; 947 received the degree of Civil Engineer (C. E.) The graduates are practicing their profession in 47 of the States and Territories of the United States, and in 18 foreign countries.

Beside the General Alumni Association of the Institute there are associations of graduates in Pittsburg, Kansas City, Chicago, and New York.

Instructors and students.—The Annual Register for 1893 contains the names of 18 professors and instructors, 8 lecturers and 206 students.

CHAPTER XXIV.

THE UNITED STATES MILITARY ACADEMY AT WEST POINT.[1]

By EDWARD S. HOLDEN,

Director of the Lick Observatory, Mount Hamilton, Cal

It is not long since we were reading in the newspapers daily telegrams from the seat of the Indian war in the Northwest. * * * In the midst of peaceful settlements a rebellion sprang up suddenly. Several thousand Indians left their reservations, bent on war. Our small and scattered Army was called upon to suppress the rising, and in a few weeks this was accomplished. The country is now at peace. The Indians are ruled justly, firmly, and honestly, by a couple of Army officers; in a few months we shall have forgotten the whole matter. As I read the telegrams day by day it seemed to me that several important points were missed by the gentlemen who were sending them. Here was a rising which if anyway successful would cost hundreds of lives and millions of dollars. All the expense of life and money was saved by our little Army directed by a few competent officers. I have not seen it clearly brought out that the whole cost of our military establishment for a long term of years would be a cheap price to pay for so prompt and peaceful a solution. The confidence felt in our officers was an unconscious compliment to their efficiency, but it seemed that it would have been worth while to inquire a little more closely just why the confidence was felt, and just how they came to be efficient. Efficiency is not a natural gift but is an acquired talent. In thinking of this petty war (which came very close to being serious), and in asking myself these very questions. I reviewed in my own mind the course of training at our National Military School and saw clearly how it is that our young men are taught to be prompt, efficient, faithful, and thorough. And I have thought that others might be interested in a sketch of the training of the cadet at our War School, especially as it is not always understood.

I shall speak of the effect of the methods adopted at West Point in developing moral character chiefly, and I shall be obliged to leave unexplained (for the sake of brevity) many points which might cause those unfamiliar with its work to think that the intellectual development of the student may suffer. That it does not so suffer it is perfectly easy to show, either by results (see the table of civil occupations of graduates, following) or by argument. But it is clear that this latter question can not be thoroughly discussed here. I therefore beg my readers to take it for granted that along with the moral results which I shall examine in detail, capital intellectual results are attained. These points should be constantly kept in mind in reading the present paper.

The candidates to the Academy are appointed one from each Congressional district in the United States and ten "at large" by the President of the United States. Thus a full corps would now consist of about 350 members. This method of appointment secures an entirely representative body. The American people are exactly typified by the entering class of each year. The age of entrance must be between 17 and 22 years.

[1] I reprint here the excellent article of Prof. Edward S. Holden, of Lick Observatory, with his permission. It appeared first in the Overland Monthly.—W. T. Harris, *Commissioner*.

There is absolutely no selection on the part of the Government, except that the candidates should be physically sound and that they should be able to pass a simple examination in English, arithmetic, English grammar, geography, and American history only. Imagine, if you will, an entering class of say one hundred members, who come from every State in the Union, from Maine to Oregon and Louisiana; who have been educated at all kinds of schools, public and private; who represent all classes of society from the cultured to the ignorant, from the very rich to the extremely poor, and whose homes may have been the simplest cottages or one of the brownstone palaces of New York or Boston.

It is impossible to conceive a more motley assemblage as to their external looks and fashions. Interiorly there is equal variety. Lads stand side by side who have had the most delicate moral nurture, or none at all; who are pure and simple, or already far on the road to dissipation; who are models of truthfulness and modesty, or already shifty contrivers of escapes from duty and obligations. There is a representation of every possible class of American youth, and all the inequalities of our society are repeated here. I wish to insist upon this now, in order that the nature of the material may be thoroughly comprehended, and in order that the result at the end of the four years may be appreciated.

In a few days, the entrance examinations are over, and the class is reduced to fifty or sixty who are to begin their four years of probation. The external inequalities have all vanished as if by magic. Each cadet is dressed precisely like every other cadet; each has precisely the same duties as every other; each lives in a room precisely like every other room; no one is allowed to furnish his quarters in any but the prescribed way, with very plain materials made and issued at the Academy. No express parcels from wealthy homes may be received. No one is allowed to have money. At the best he can only have credit, on a pass book, and this credit can not be utilized without special permission. In a week every sign of external inequality has absolutely vanished. It never returns so long as the cadet remains a cadet. After his graduation, wealth or social position may count. Until that time, no external circumstances disturb the absolute personal equality of every member of each class. There are personal inequalities formed by the cadets themselves between class and class.

Each higher class maintains (and in general deserves to maintain) a superior standing to every lower one. Official inequalities are created by the appointment of the best men of the second year to be corporals, of the third year to be sergeants, of the fourth year to be company officers—but these positions can be attained by good scholarship and by soldiery bearing, and in no other way. These rewards are open to all on absolutely equal terms. In the class-rooms the same equality exists. The cadets are divided into small sections of eight or ten members for the purpose of instruction. Each section is presided over by some young officer of the Army, chosen for his ability. The professor in charge of a department visits all the section rooms frequently. Every two days or oftener each student recites in the presence of his professor. The most accurate record of the scholarly performance in the section-room is kept by the instructor and checked and verified by the professor, so that it is certain that the scale of marking is the same throughout the class. The lowest man in the first section is always a little better than the highest one in the second. Absolute and complete justice is attained in this way more nearly than in any other organization it has ever been my fortune to see and study. I have never heard it seriously questioned by student, officer, or professor. Once each week the marks of each cadet for every recitation are publicly posted. Thus every student can compare his work with that of every other member of his class. He knows from week to week exactly what he has been doing, and thus exactly what he must accomplish in the future to attain any given excellence. The sections consist of 8 to 10 members. The recitations are from sixty to ninety minutes long, depending upon the topic in hand. Therefore each cadet is called upon every day, and the quality of his work is thoroughly tested.

The certainty that he must recite each day, and that no failure can possibly be hidden, obliges each student to prepare his lessons with a thoroughness and faithfulness which is not attained at any other institution of learning with which I am acquainted. The effect on the moral character is immediate and admirable. The cadet learns in the recitation room, as everywhere else, not to shirk his duty, and he learns what few in civil life learn so early, namely, that every shortcoming in the course of duty is sure to bring with it its corresponding penalty.

A thoroughly unsatisfactory recitation not only receives a low "mark," but it is treated as a dereliction of duty also, and confinement to quarters during Saturday and Sunday afternoons is given as a punishment for such failure. Twice during each academic year there are public written and oral examinations in the presence of the whole faculty.

A mark is assigned for the performance of the student at the examination also. If the sum of all his marks in any study is above a certain quantity the cadet is proficient, and he receives a class rank in that study depending upon his performance during the year, or it may be on his performance during a period of two years—for important subjects like mathematics are studied for the whole of two years. If on the other hand he is deficient, another careful examination under the eye of the whole faculty is given to him and the result of this decides whether he shall be dropped altogether (and thus lose all hope of rank in the Army) or turned back to the class below his own (thus losing one year's promotion).

None who are deficient are permitted to go on with their classes. These severe penalties are constantly before the eyes of every student. They are administered with perfect justice, and with inexorable certainty and with promptness. A few weeks of inattention to duty will subject the careless student to them, and he knows precisely what the result of carelessness will be. Hence the idle, the careless, and the vicious are soon eliminated from the school; the others are brought forward to a high point of diligent and persevering attention to duty. Good intellectual performance is a duty. The Government is at considerable expense in maintaining a cadet at the Academy. The plain question is, Is it worth while to be at this outlay for the promise and the performance of this particular student?[1] The daily test in the class rooms and the periodical examinations answer this question definitively.

To complete the consideration of this part of my subject it is necessary to say how the graduating class rank is obtained. The four or five highest of each graduating class are assigned to the Engineer Corps, the next to the artillery, the next to the cavalry and infantry. The desirability and precedence of the different arms of the service (with respect to their consideration, privileges, pay, etc.) is in this order. Moreover, the cadets are allowed to select the desirable regiments in each branch of service according to their class rank. Promotion in one regiment may come several years before promotion in another, etc. Hence the graduating class rank is of immediate importance to the cadet. It is fixed as follows: From his record in each subject, as mathematics, physics, etc., a rank in that subject is assigned to each student. From the aggregate of all these special proficiencies a general proficiency is deduced. This latter mark fixes the graduating class rank. Thus the difference between No. 5 and No. 6 in a class may have been decided by a week or even by a single day of careless work two, three, or four years before the time of graduation; and this difference may make a marked change in the future of the young officer. Instead of important and responsible service in the Engineers, he may have slower promotion, less pay, and less desirable service in another arm of the service. This is perfectly recognized by all the students. They therefore recognize the perfect justice of the final award. Little is said to them of the importance of their work in this respect. The natural effect of certain conduct is completely understood by all, and it follows with a certainty and a justice which is practically perfect. It trains each student in the heathen virtues of fortitude and justice as no other system can. It is the natural system—the system of nature—ultimated.

I may now turn to the more strictly military education of the cadet, and here again we shall see the natural system of training in full operation. Here, as in the account of the mental work required of the students, I shall specially consider the effect of the system on the building up of a character and on the development of the simpler and sturdier moral virtues.

A method which is so successful in training some of these, is applicable to education in all the others. The conduct, the whole official conduct, of each cadet is the subject of record, just as his proficiency in a study like chemistry or tactics.

---

[1] It appears to me that this aspect of school life should be placed frequently before students in our State colleges. It costs the State $400 to $500 per year for each student. The plain question to be answered for each individual student is, Is he worth $400 to the State, or is he likely to be? If he is not, then his place should be filled by one who is.

The usual lax system encourages the student to consider the State as bound to take care of him, and tends to extinguish his manly independence.

It is recognized that the official conduct required is necessarily difficult for the new comer to follow, and hence this record has no effect on his graduating rank until after the student has been six months in the Academy. Moreover, his conduct—discipline—in the last year of his course is counted twice as important as his conduct in any other year.

This is as it should be. To obtain a numerical standard of conduct, recourse is had to a system of demerit marks. Good, that is perfect conduct, is expected of all, and no credit is given for it. Any failure in conduct has a certain number of demerits attached to it. "Late at roll call" would carry 1 or 2 demerits; "absent," 10; slight untidiness in dress, 1; inattention in ranks or in recitation, 5, and so on.

A cadet may obtain 125 demerit marks between June 1 and December 31 (a period which includes service in camp) and 90 between January 1 and May 31 (in barracks) without incurring any serious consequences. His class rank will be lowered just as if he had partially failed in a study like chemistry or physics, and he must suffer the confinements to quarters on Saturdays, etc., which are attached as punishments to certain offenses in addition to demerit; but his standing as a member of the school is only lowered, not endangered. If, however, he has more "demerit" than these maxima, he is reported as deficient in conduct; his case is specially considered, and he is either suspended or dismissed.

Let us see the process by which these marks are assigned. Any "offense"—as for example, "late at parade roll call"—is noted by the proper officer (nearly always a cadet officer, not an officer of the Army) and is reported in writing to one of the army officers. The "offenses" for each day are posted on a certain bulletin board. An "explanation" in writing is required for each offense. Not to render such an explanation is itself an offense. If there is no excuse, the return to be made is:

Offense: Late at parade roll call.
Explanation: No sufficient excuse.
(Signed)
A. B.,
Cadet fourth class, D Company.

Each cadet must therefore examine his official conscience, so to say, regularly, and record the results of his examination. Ill feeling is avoided, as the whole transaction is carried on in writing, and there are no (or few) personal reprimands.

Let us now see how rigid a system this is. Take the one matter of tardiness. A cadet will attend the following roll calls daily: Reveillé roll call, breakfast (and formation after breakfast); class formation at 9 a. m. (and formation after this recitation); class formation at 11 a. m. (and formation after this recitation); dinner roll call (and formation after dinner); class formation at 2 p. m. (and formation after this recitation); drill roll call about 4 p. m.; parade roll call about 6 p. m.; supper roll call (and formation after supper). These are the regular roll calls of every day during the month devoted to study. In camp life there are even more. There are fifteen opportunities daily to be "late." By improving all these opportunities for six days ($6 \times 15 = 90$) between January 1 and May 31 the cadet would become deficient in conduct on account of tardiness alone. There are hundreds of other slight infractions of discipline, such as "one button of uniform coat unbuttoned at drill," each of which carries with it at least one demerit. Ninety in all are allowed, and no more. This limit passed, the cadet is deficient in conduct, and he knows it from the first. This limit approached, and his promotion in the Army two, three, or four years from now will be to a lower corps instead of to a higher; to a less desirable station or regiment, instead of to a more desirable. This also is known from the first. There is no talking; simple laws are prescribed; it is not difficult to conform to most of them; every reasonable excuse is admitted; the result is like the result of gravitation—inevitable, inexorable, just, immediate.

Observe what effect this constant responsibility must have. Take the case of punctuality alone. There are fifteen chances daily to be "late." The cadet is at the Academy about forty-six months (two months on leave of absence). Averaging the various duties, we may say that he is called upon to be prompt at roll call fifteen times a day for something like 1,200 days; that is, the virtue of punctuality is insisted on in this particular way on 18,000 different occasions. In the same way each cadet is personally called upon to be neat, orderly, attentive, obedient, twenty, thirty, fifty thousand times during his student life. And each failure is noted. I have forgotten how many "demerits" I personally received during my course (many more than I ought, no doubt), but I chance to recollect that I was not "late" for a single one of the 18,000 opportunities. It was a tradition in my time that Prof. A. D. Bache (a graduate of the Academy at the head

of his class, and the talented chief of the U. S. Coast Survey) had no demerits at all for his whole course.

Punctuality and promptness are insisted on in many other ways beside the one just cited. Order is enforced in the care of the arms, the clothes, the books, the quarters of the students. Obedience is the center of the whole system. Respect for superiors is natural to lads who are really in the daily presence of their superiors—both their fellow-cadets and the Army officers. Real respect is the basis of modesty. With regard to their own powers and in relation to their fellow-members of the Army, the graduated cadets are modest and respectful not only in manner, but in reality. It is one of the minor deficiencies of their very special training, that they are allowed to remain too ignorant of the great world outside of their little one; so that we frequently see a spirit of arrogance toward this outside world growing up alongside of a spirit of real modesty to everything within their own smaller circle. I need not say that this is by no means necessarily so. It is the fault of the application of the system, not the fault of the system itself, and it can be easily corrected. Outward respect is taught in countless ways—by the required salutes of sentinels, etc. Perfect, simple, absolute truthfulness is taught also in countless ways. Every written "explanation" must be perfectly true. Each cadet must always stand ready to explain his explanation in writing or otherwise. If he should descend to prevarication, he would be at once court-martialed for "conduct unbecoming a cadet and a gentleman." If he were found guilty he would be promptly dismissed the service.

Moreover, the cadets have their own private *Vehm-Gericht*. If a comrade is known to be guilty of lies or theft, he is privately notified to tender his resignation. Only the guilty will make such a sacrifice of their prospects and career; and this action on the part of the students has so far, I believe, produced only good results. In my opinion, however, it is dangerous and unnecessary, and should be prohibited.

Minor offenses against the unwritten law of the cadets are punished by refusing to have any but official relations with the offender. Occasionally this punishment has been unjustly administered, but in general I have no doubt that good and not harm has resulted from this custom. It can not be and should not be touched by law.

I have one more regulation and practice of the Academy to consider. I refer to the custom of requiring written reports from certain of the cadets after the completion of certain duties (as those of officer of the day, etc.). The cadet whose tour of duty has expired transfers his functions to his successor, and at once submits a written report regarding the matter in hand. This report concludes as follows: "I certify that the above report is correct and just." The words, "on my honor as a cadet and a gentleman," are always supposed to precede the signature. I have never known such a report to be falsely signed. It is universally agreed among the cadets that they can not permit a comrade to violate his honor even to shield others from the severest punishments, still less to shield himself. A code of honor, highly artificial, if you choose, but highly efficient both in its outer effects and in its inner compulsions, is thus created, maintained, and transmitted, among the students of this school. When they become officers, this code of honor becomes a code of honesty.

I shall give some of the statistics of the Army considered in its relation to the disbursement of public money, further on. It will be found that there is no organization on earth, and that there never has been one, in which money has been handled so honestly as by the officers of the American Army.

Any system can be judged by its average, or by its highest product. The highest intellectual product of the Military Academy is the Corps of Engineers. Very few persons not graduates of the Academy have been members of this Corps. In general, it is recruited from the first five members of each successive class.

To the Engineer Corps is intrusted the expenditure of our large appropriations "for the improvement of rivers and harbors," which often amount to fifteen to twenty millions of dollars annually. During the war of 1861-'65 they handled millions upon millions of public money. I believe that I am correct in saying that no single officer of this corps has ever been found guilty of embezzling the public money for his own use.

The table which follows will give some idea of the intellectual results attained by the methods of the school:[1]

[1] These statistics are complete from 1802 to 1870, and are taken, with other similar data, from Gen. *Cullom's Biographical Register of Cadets of the U. S. Military Academy.*

Civil occupation of graduates who have resigned from the Army.

President of the United States	1	Professors and teachers	131
Members of the Cabinet of the United States	4	Superintendent of Coast Survey	1
Ministers from the United States to foreign courts	11	Surveyors-general of States and Territories	10
Chargé d'affaires from the United States to foreign courts	2	Chief engineers of States	14
United States consuls-general and consuls	9	Presidents of railroads and other corporations	77
Members of the United States Senate and House of Representatives	21	Chief engineers of railroads and other public works	61
United States civil officers of various kinds	170	Superintendents of railroads and other public works	50
Presidential electors	8	Treasurers of railroads and other companies	21
Governors of States and Territories	14	Civil engineers	217
Lieutenant-governors of States	2	Judges	13
Members of State legislatures	77	Attorneys and counselors at law	185
Presiding officers of the State senates and houses of representatives	8	Bishops	1
Members of conventions to form State constitutions	13	Clergymen	29
State officers of various grades	76	Physicians	12
Adjutant-general and quartermaster-general of States and Territories	24	Merchants	121
Officers of State militia	145	Manufacturers	72
Mayors of cities	15	Artists	3
City officers	48	Architects	7
Presidents of universities, colleges, etc	41	Planters and farmers	228
Principals of academies and schools	32	Bankers	17
Regents and chancellors of educational institutions	13	Bank presidents	8
		Bank officers	21

I have seen a curious comparison by the late Gen. Alvord between the losses to the Government through the defalcations of Army officers (both graduates of the Academy and appointees from civil life) and losses to the Bank of England through the defalcations of its employés. In both cases the loss was a very small fraction of 1 per cent of the money handled, but the percentage lost through the unfaithfulness of our Army officers was only a small fraction of the loss through the employés of the bank. I regret that I have not been able to find Gen. Alvord's pamphlet, so as to quote his exact figures, but I am sure of the general conclusions.

In comparing such statistics, it must be remembered that the officials of the Bank of England are a picked class, as well as the officers of the Army. The former are selected from the younger sons of wealthy families, and a clerkship is an honorable and well paid life career. Moreover, it must be remembered that during our civil war many appointments to places in the Pay, Quartermaster, and Commissary departments were hurriedly and ill advisedly made from civil life, and that the effect of the Military Academy training was chiefly felt by the checks placed by its methods over all officials, whether graduates or not. Even under the tremendous strain of the late war, the code of military honor and honesty showed itself to be highly effective. The total disbursements by Army officers during the war were over $1,100,000,000. The defalcations and money losses of all kinds (including captures of funds by the enemy, were less than $1,000,000, or less than one tenth of 1 per cent on the money handled. No organization for the disbursement of public money, from the time the pyramids were built until now, has a record approaching that of the disbursing officers of the United States Army. And this bright record is a direct result of the training of the Military Academy at West Point.

We have just seen what the effect of the Academy training has been in matters relating to faithfulness and honesty in the care of public funds. It is more difficult to give statistical accounts of faithfulness in the performance of other duties. Perhaps I may be allowed an illustration which seems to me to express, in brief, the whole spirit of the Academy.

One of my close friends, a young engineer officer, was charged with the longitude determinations along the northern boundary of the United States, between Winnipeg and the Lake of the Woods. His work consisted in transporting a set of chronometers running on Greenwich time from station to station, and in determining at each place the local time by observation. A comparison of the local times with the chronometer times gave the longitudes from Greenwich. As the country near the Lake of the Woods is but a succession of morasses, this work had to be done in the depth of winter, when the marshes were frozen solidly. My friend, a lad of 22 or so, had nearly completed all the links in his chain of stations, when he was caught with his entire party in a terrific storm of wind and snow. For hours and hours the band, with the dog

sledges, plodded on and on towards the station where their companions were feverishly awaiting them. To stop was death. One by one the men became exhausted and fell in the snow, begging to be allowed to sleep and to perish by freezing rather than to go on in the hopeless search for camp. The few stronger ones (my friend among them) spent their forces in compelling the others to rise and struggle forward for their lives. The storm grew wilder and wilder, the night fell, and finally it seemed certain that the party was hopelessly lost and must perish.

Even the dogs refused to go farther. There was nothing left to do but lie down and die. My friend opened his note-book and with his freezing fingers wrote a farewell message to his old father (himself a graduate of the Academy and a distinguished general officer), to his mother, to his sister. Then folding his cloak about him and commending his soul to God, this young hero laid down to sleep—the last of all his command—with the knowledge that sleep was certain death. He had done his duty. He could do no more. But yes—duty had another call. In the deadly stupor and chill of death it spoke to him, and the call was heard. As he told me, simply, not thinking it of great moment, "I remembered that the chronometers were not wound," and that the longitude would thus be lost, for the party was sure to be sought for and found within a day. Once more he obeyed the call of duty. Once more he rose, struggled to the sledge, opened, wound, and carefully covered the chronometers, and once more laid down to die—this time in peace. All his duty was done. It was a deed of which humanity may be proud; done simply, in solitude, manfully, faithfully, to the utmost. After many hours the party was indeed found—and saved; "the longitude was not lost;" and the training of the school on the Hudson was displayed here, as it had been so often before, as it will be so many times again.

The Academy was founded in 1802; in the war of 1812-'15 the young graduates took part. One-sixth of all who served in the field laid down their arms for their country; one-fourth of the total number were either killed or wounded; one-fifth of the survivors were specially rewarded for conspicuous gallantry. In the Mexican war our armies were officered by graduates, and were opposed by a hostile force quadruple their own. In a little over a year they had fought and won thirty battles, taken a thousand cannon, carried ten fortified places, and completed the conquest of Mexico and California. Gen. Scott has said (in a letter of June 21, 1860): "I give it as my fixed opinion that, but for our graduated cadets, the war between the United States and Mexico might, and probably would, have lasted some four or five years, with, in its first half, more defeats than victories falling to our share; whereas, in less than two campaigns we conquered a great country and a peace, without the loss of a single battle or skirmish."

It is something to be able to do well what one sets out to do. Efficiency is a kind of virtue, and the record of these two wars sets a seal on the practical efficiency of the graduated cadets. * * *

I have thus traced rapidly a sketch of the national war school at West Point. I have shown how her sons are recruited from every rank of life, and how various are their conditions. I have exhibited the training which they undergo, and have shown how it perfectly conforms to the method of nature itself. I have set forth, from statistics, the results of such training; and the record is one in which we as Americans may well be proud. No human organization has ever fulfilled its special functions more perfectly than our national Military Academy. It will be immediately obvious why this is so, and I feel confident that no educator can read this sketch without finding in it lessons for himself to carry out in his own field of work. The results attained in our national school under highly specialized conditions can not be reached in degree, under the circumstances of the common school.

But the principles which stand out are eternally applicable. Once comprehended, they can be applied anywhere, under any circumstances. It would be unjust and ungracious in a son of the Academy to fail to name the man to whom above all others West Point owes its present system.

Gen. Sylvanus Thayer was its superintendent for seventeen years, from 1817 to 1833, and gave to it in his long administration essentially the form it now has. The principles of his government have been most faithfully and intelligently carried out by his successors in office and by the corps of professors and instructors. Public opinion among all the graduates is an immense force which tends to preserve and consolidate the main principles of the present system. There is no graduate of the Academy who would not make any sacrifice to preserve a sys-

tem whose excellence has been proved to him in thousands of varying circumstances. The principles which govern the administration of the Military Academy are of the highest interest to those in charge of our common schools; but they are still more important, in my view, to the governors of our State universities, especially when those universities have benefited by a grant of the public land and have engaged themselves to maintain a college where military subjects must be taught. Such universities are endowed by the United States for a special purpose, and they are in every way sacredly bound to carry out their trust.

It is impossible and undesirable to organize such military departments on the exact model of West Point. Their main object is not to make professional soldiers, but rather to train civil citizens who shall not be totally ignorant of arms, and who shall have the patriotic spirit as well as the technical ability to be useful to the nation in a time of trial. Such times of trial we have experienced already, and we shall experience them again. It appears to me on every account important that this subject shall receive attention. And I know of no better way in which to inculcate the simple virtues which are the basis of character than to encourage and foster these training schools especially endowed by Congress. The General Government, the State, the university, and the individual student will all be gainers—and that, in many different ways. If I have been able to show that there is a duty here, and that the means of performing it are simple and near at hand, I shall have done a public service.

If I have further exhibited some of the excellences of a Spartan system of training, which has triumphantly withstood the tests of three great wars, as well as the trials which come with peace, I shall be most glad to have returned thus much to my Alma Mater.

It seems to me that I understand, and that I must have made it clear, why it is that our little Army has never failed in any trial and why it never can fail so long as the same wise counsels govern the war school at which our officers are trained: and it appears to me that the methods which have been successful there are, with suitable modifications, universally applicable and deserving of adoption throughout our whole public educational system—from the common school to the State-supported university.

CHAPTER XXV.

THE CARE OF TRUANTS AND INCORRIGIBLES.[1]

BY EDWIN P. SEAVER.

Superintendent of Boston Schools.

Boys who will not go to school when they ought, and boys who are so ill-behaved when they do go that teachers have good reason to wish they had stayed away—these are the truants and incorrigibles who must be taken care of if education in this country is to become universal in fact as well as in purpose, and so do its full work in training to good citizenship, and in preventing crime. Little matters it whether the boy is out of school from his own waywardness, his parents' neglect, or the willingness of teachers to be rid of a troublesome pupil; in any case he stands for a failure in education, and is a source of danger to the commonwealth.

How to care for such boys—and girls too, for there are such girls—now to keep them in a school where they must work steadily, behave well, and learn to cherish some worthy purpose in life—this we may call our truancy problem.

Primarily the truancy problem is an educational problem for school authorities to deal with, not a matter of municipal regulation for police magistrates to manage. Not until truancy, neglected and unchecked, has led to positive crime, ought the truant to be handed over to the criminal jurisdiction. Not until education has exhausted all means of prevention and reformation should the truant be surrendered to the police magistrates for punishment.

The distinction here implied is of the greatest moment, though often overlooked or ignored. Let it be properly emphasized.

Truancy is not in itself a crime; but it is the dangerous way that leads many a boy into crime. The boy who has broken away from the restraints of home and school is not by that act a criminal; though he is giving rein to tendencies that will soon make him one. He is in grave danger; but timely care may save him.

Now, if the truant is not a criminal, it is an injurious mistake to treat him as if he were; it is worse, it is a crime against society. Restraint he certainly needs; but the restraint of confinement in a prison, or even in a reformatory with criminal companionship, destroys at once the best chance there is of saving him from crime. For that best chance depends on keeping his self-respect unimpaired, which cannot be done if he becomes an inmate of a penal institution. Every inmate of such an institution well knows, whatever the cause of his commitment and however correct a life he may lead after release, he must ever afterward bear a certain stigma for having served a sentence in a place set apart for the detention of criminals. A hard and unjust fate this may be; but there is no help for it; it is the way the world has of looking at such things, and the boy knows this just as well as we do.

Therefore does the hope of saving the truant from a criminal career depend on his being kept as long as possible out of the criminal jurisdiction. His self-respect must be guarded and cherished as the very germ of that better life that

[1]The following valuable paper was read to the Department of Superintendence of the National Educational Association at its meeting in Richmond, Virginia, and at the request of the Commissioner of Education a copy was furnished for this report.

is to be awakened and strengthened in him. The place set apart for his detention, instruction, and discipline ought not to be the jail, the workhouse, or the reformatory; but it should be a separate establishment, wholly distinct and apart from penal institutions, and managed by the educational authorities of city, county, or State, not by the penal authorities.

These remarks, and the conclusion drawn from them, seem fairly to sum up the teachings of experience in the administration of compulsory school-attendance laws in those parts of the country where such laws are enforced. A brief review of this experience may therefore be interesting.

When really earnest efforts began to be made in Massachusetts to enforce the school-attendance laws it became necessary for towns and cities to provide places for the detention of truants. The places selected were generally unsuitable—in some cases extremely so. The prevailing idea among the officials seemed to be that the truant was a sort of malefactor, for whom any place of imprisonment was good enough. He was to be punished—that was the main thing—by being detained in a disagreeable place and compelled to do hard and disagreeable tasks, until he should be glad to pay for his liberty by going to school regularly; and his disagreeable experience should be a warning to other boys. Vindictive justice, not reformatory training, seemed to be the guiding principle. Accordingly truants were sent to the town almshouses, or to houses of correction, or to reform schools, or to any place where they could be kept from running away and forced to work.

But in time there grew up among thoughtful people the opinion that such treatment of truants was not only ineffectual for the purpose intended, but positively injurious. The evil which should have been cured was only intensified. The remedy was worse than the disease. Frequent cases were cited which tended to prove that ill-managed truant schools—that is, truant prisons—were only primary schools of vice and crime.

The late Henry F. Harrington, for many years the able superintendent of schools in New Bedford, eloquently protested in his official reports against the city almshouse being assigned as a place for the detention of truants in that city, and against the sort of care and training they received in that place. He declared with emphasis that by no official act of his would he become responsible for sending a single truant to that place. Not that the officers in charge were cruel or unfaithful; but they were much better fitted for their ordinary duties than they were for the delicate and difficult task of reforming wayward boys.

But perhaps the most conspicuous example of this bad system of caring for truants was to be found in the so-called truant school at Boston. Happily this school is soon to be abolished; and in place of it a new school, to be organized and managed on a far better theory, is nearly ready to start. This will be known as the Parental School; and some notice will be taken of it in a later part of this paper.

There is a large and once pleasant island in Boston Harbor, whose name, Deer Island, has acquired in recent years an unpleasant notoriety; for it has become in the popular mind a synonym for city prison. A broad expanse of water separates this island from other land in all directions save one; and here the tide runs through a deep channel with such force that attempts to escape by swimming are quite likely to end fatally. The great natural advantages of such an island as a site for the House of Correction, the House of Industry, and other such institutions were readily enough perceived by the city authorities. The impassable gulf of waters served the purpose and saved the cost of high prison walls.

Here, too, naturally enough under the influence of ideas current forty years ago, was placed the House of Reformation for juvenile offenders, commonly known as the reform school. This is the institution which has received all boys convicted of truancy in Boston down to the present time. For convenience of classification there has been maintained within the institution a certain distinction between the truants and the other boys, the former being called the "truant school" and the latter the "reform school." But both "schools" are to all intents and purposes one and the same. The so-called truant school of Boston, therefore, has no real and separate existence, it is merely a department in the House of Reformation for Juvenile Offenders maintained for convenience of administration. All this, however, is soon to be changed. The truants are to be cared for in some school wholly separate from the House of Reformation and situated at a distance from it and all similar institutions.

The selection of Deer Island as a place for the detention of truants and juvenile offenders was, as has been said, natural enough forty years ago. Little ac-

count was then taken of the effect of the criminal associations of the place upon the minds of the young candidates for reformation. The one thing certain was that the boys could not possibly escape from the island, as boys were constantly doing from other reform schools, giving the officers infinite trouble in recapturing them. In those days the lesson had not been learned that right treatment of boys, even if they are "tough characters" and doers of criminal deeds, is more powerful to hold them in place than are bolts and bars and high walls. The reform school was formerly understood to be and practically was nothing more nor less than a boys' prison. The only advantages it possessed over the common jail were these two: (1) The boys were instructed in school studies a part of every day; and (2) they were not exposed to the society of older and harder criminals.

But modern experience has proved beyond a doubt that bolts and bars and high walls and prison-like discipline are wholly out of place and injurious in juvenile reformatories; and the same ought to be even more true of truant schools. The practical success of such reform schools as that at Plainfield, in Indiana, or that at Waukesha, in Wisconsin, or that at Lansing, in Michigan, or that near Providence, in Rhode Island, or that at Westboro, in Massachusetts (since its reorganization and removal to open premises), leaves no open question on this subject. We now know by practical demonstration that the best way to keep boys in a reform school is to place no barriers in their way. Let them run away if they wish—sometimes they will run away, though not so frequently as under close confinement—but rely on right methods of treatment and discipline to hold them—not soft methods nor sentimental methods, but strong, kind, and right methods.

The unsuitableness of the House of Reformation on Deer Island as a place for the detention of truants has been strongly felt in Boston for many years. One manifestation of this is seen in the increasing unwillingness on the part of magistrates to send boys who are merely truants "down to the island." There has been a growing practice of putting complaints for truancy on file, in the hope the truant might see his danger and mend his ways. But often the truancy complained of has been accompanied by criminal acts which make the case really more serious. In such cases the boy is usually "sent down," the complaint for truancy being resorted to merely as a means of giving him a shorter term in the House of Reformation than he would get under a criminal complaint. So it has come to pass that the so-called truant school on Deer Island is hardly a truant school at all, but only a primary reform school. The consequence has been that truants have been allowed to ripen into juvenile criminals before they were taken hold of in real earnest. Measures to cure truancy in its early stages have been delayed until a worse disorder has made its appearance.

Another strong reason for hesitating about sending a mere truant or comparatively innocent juvenile offender down to the island has been the stigma thereby entailed, and the consequent lasting injury to the boy's self-respect. Self-respect, as already pointed out, must be the main thing to rely upon in the work of reform. This stigma is all the more serious from the fact that the reputation of having "been down to the island" may mean that one has served time not merely in the "truant school," or in the "reform school," but in the House of Correction or in the House of Industry. People do not stop to make distinctions.

To show how cruelly this stigma may be used, let us take a case the like of which has happened more than once. A truant boy is sent down to the Island for a short term, we will suppose, and afterwards, having repented of his waywardness, has grown up to be an honest, steady man. One day he is called into court as a witness and he gives his testimony. He is cross-examined, but is unshaken, because he has told the truth. In conclusion he is asked: "Have you ever been convicted of crime?" "No, sir." "Ever served time at Deer Island?" "Yes." "That will do; you may step down." It is of no use for him to explain that he was at the Island a short time when a boy for truancy: the poisoned arrow has hit the mark; the jury's mind has been prejudiced; and our grown-up truant boy feels that his early fault will never be forgotten.

Realizing the evils growing out of the system that had been practiced in Boston for many years the friends of a better system made repeated applications to the city government, and, failing there, to the State legislature for a complete separation of the so called truant school from its connections and surroundings by the removal of it from Deer Island to some suitable place on the mainland. After some years of continued opposition from those who did not wish to have the existing system disturbed, a law was passed requiring the city of Boston to

some of the truant schools there and gathered valuable documentary information, which supports some of the views already expressed, and which was of use in shaping some features of the parental school in Boston.

Truant schools in England are regarded as wholly distinct in purpose from the reformatories and from industrial schools. This distinction has been recognized and acted upon since the year 1878, when the first truant school was established. There were, says Her Majesty's inspector in his report for the year 1889, 10 truant schools in the large towns of England. At the same time there were in Great Britain 56 reformatory schools, including 3 reformatory school ships; 142 industrial schools, including 7 industrial school ships; and 18 day-industrial schools. All the reformatories and most of the industrial schools owe their existence to voluntary and independent efforts. School boards have the management of all the truant schools, of all the day-industrial schools (save one in Liverpool) and of eight of the industrial schools. The industrial school ship Shaftsbury is managed by the School Board for London; and this Board has also established two truant schools.

Formerly the practice was to commit truants, if bad enough, to the industrial school or the industrial school-ship. The present truant schools, however, seem to answer the purpose of an earlier and more reasonable treatment of truants than the industrial schools could afford, for the inspector says:

"Should the new act stop the commitment of truant children to industrial schools, a diminution in the number of the latter may be followed by an increase of truant schools."

Something of the character and purpose of the English truant schools may be gathered from the following language of the inspector:

"To these schools are sent children who, after repeated warnings, have failed to make a satisfactory number of attendances at the ordinary day schools, in the hope that the strict corrective discipline which they are subjected to in them will make them less inclined to play truant when they are allowed to return to their homes. The terms of detention vary from a few weeks on the first commitment to a few months, if the first or subsequent commitments have not had the desired effect. The average length of detention is ninety-five days."

On the subject of discipline in these schools the inspector has some significant remarks, thus:

"In some of these schools drill is substituted for play, and in some every boy has to undergo a limited period of solitary confinement in light cells. In some schools, which are managed on more kindly and, I think, more rational principles, there are no cells, and some play is permitted. I fail to see that the more strictly managed schools can show better results than the latter, and therefore I am entirely in favor of the second and more lenient system, and I would begin by abolishing cells altogether."

The ages of boys in the English truant schools are about the same as we should expect to find in the United States, had we schools of a similar kind. Thus out of 1,532 boys admitted in one year there were:

6 to 8 years of age	2
8 to 10 years of age	205
10 to 12 years of age	740
12 to 14 years of age	585
	1,532

A prominent feature in the English plan of dealing with truants is the conditional release from the truant school called a license. This is usually given after a few weeks' detention. It puts the boy on probation, but keeps him still under the control of the truant schoolmaster, who may recall him at any time when he fails to deserve his liberty. The remarkable extent to which this practice of "licensing out" is carried in England is shown by the following figures:

Under detention in all truant schools December 31, 1889	3,980
In school	780
Out on license	3,199
Absconded	1

Thus it appears that for every boy in the truant school there were four more out on license and liable to be recalled for irregular attendance at the regular schools.

The extent to which boys are returned to the truant school two, three, or more times is indicated by the following figures:

Total licensed and released in twelve years (1878-'89)	10,399
Licensed and not readmitted	6,198
Licensed and once readmitted	2,606
Licensed and twice readmitted	1,017
Licensed and three or more times readmitted	578

The inspector calls attention to the large number of readmissions, saying that the results of the truant schools "are not altogether satisfactory." Even the large number, 6,198, of boys "licensed and not readmitted" can not be taken as proving that three-fifths of the boys are cured of truancy by only one period of detention, because many of these when first licensed must have been near the age of 14, at which age absolute release takes place. These facts seem to show that the period of detention before the first release on license is generally too brief. It should probably be a few months rather than a few weeks. Thus more time would be allowed for the firm establishment of right tendencies in the boy before trying him on license. With this improvement the English system of licensing out from truant schools would seem to be a good one for us to adopt.

Upton House, a truant school under the control of the School Board for London, is thus described by Mr. Capen who visited it in 1891:

"The plan adopted by the London School Board for dealing with truants is as follows: Boys are usually sent to the Upton House by the magistrates until they arrive at the age of 15 years, but in some cases for short periods only, as six, eight, twelve, or sixteen weeks. The usual course is to license the child out at the expiration of ten weeks, on condition that he attends a certified efficient school regularly. It then becomes the duty of the teacher of the school at which he attends to send a post card to the head office on every Friday afternoon, giving particulars of the boy's attendance. If they are perfectly satisfactory for a period of nine months, application is made to the Home Secretary that the boy may be discharged. If, however, the teacher's report shows that the boy has not attended regularly, an officer is at once sent to visit the boy's home, and to warn the parents that if the boy does not attend with perfect regularity the license will be revoked.

"In many cases this warning is all that is needed. But should the boy continue to be irregular in his attendance, his license is revoked and he is taken back to the truant school. On this occasion the period of detention extends to about three months, after which the boy is again licensed out. If this license is revoked a second time, his next period of detention is still longer. In ordinary cases there is no necessity for revocation of the license, but if, as occasionally happens, three or four revocations of the boy's license are ineffective, an application is made and proceedings are taken to have the boy sent to the ordinary industrial school, or what we call a house of reformation.

"The subsequent attendance of the boys who have undergone the discipline of Upton House shows the efficacy of the system to cure truancy. The average attendance of the boys licensed out for the last ten years except the year 1884, when the school was being rebuilt, is as follows:

	Per cent.		Per cent.
1879	88.80	1885	95.19
1880	84.07	1886	94.27
1881	91.73	1887	91.61
1882	90.97	1888	88.94
1883	90.96	1889	91.60

The following is the time table at Upton House:

TIME TABLE.

A. M.
6:00.....Boys rise, fold bedding, and wash—talking not allowed.
7:00.....Clean house and school—quiet conversation allowed.
8:00.....Breakfast—talking not allowed.
8:40.....Prayers.
9:00.....Distribution for school and work; one division in school, remainder industrial work—necessary conversation.
M.
12:00.....Drill—talking not allowed.
P. M.
12:50.....Prepare for dinner—quiet conversation allowed.
1:00.....Boys' dinner—talking not allowed.
1:30.....Recreation.
2:00.....Distribution for school and work—necessary conversation.
5:00.....Drill—talking not allowed.
5:30.....Prepare for supper—quiet conversation allowed.
6:40.....Supper—talking not allowed.
6:30.....Industrial work—necessary conversation.
7:30.....Prayers.
8:00.....Boys to bed—talking not allowed.

In conclusion shall be given, briefly stated, the points that were considered essential in the organization and management of the proposed Parental School in Boston. They are all implied in the idea suggested by its name. In a legal sense the school is to stand *in loco parentis* to the boy up to the age of 14 and give to him, as far as possible under the circumstances, a good home.

1. The boys should be grouped in families of moderate size, age and moral condition being considered in the grouping.

2. These families should dwell in separate cottages designed to accommodate twenty-five or at most thirty boys each.[1]

3. The family life in these cottages should be in all its incidents as complete and homelike as possible. Meals should be taken in the cottage dining rooms, not in one large dining hall, even if that be the more economical plan. The civilizing process, which most of these boys greatly need, can not go on in the large hall, but it can go on in the small cottage dining room.[2]

4. Each cottage should be under the care of a house master and house matron—preferably a man and his wife—who should be to the boys as father and mother. A third adult, as a teacher or other officer of the school, should be lodged in each cottage and assigned some of the domestic cares. In emergencies the help of this third adult might be invaluable.

5. All housework should be done by the boys under competent direction.

6. There should be school instruction three hours a day.

7. There should be moral and religious instructions on Sunday—a general service in one part of the day, morning or afternoon, and in the other part such separate denominational instruction as might be desirable. In a sense moral instruction would be going on all the time, the whole discipline of the school being in fact directed to that end; but the Sunday instruction in morality would be of the kind usually associated with religious instruction. It would be the theory, of which week-day experiences would furnish the practical illustrations.

8. There should be some good manual training; although in view of the rather short periods of detention and of the insufficient age and strength of many of the boys, such training could not be expected to reach very far into the learning of trades. What has become known by the name of Sloyd is probably the best form of manual training for such boys as would come into the Parental School. Many a boy is a truant from sheer inability to grasp book studies. On the minds of such boys manual training often takes a strong hold.

9. If there be land fit for the purpose, instruction in gardening should be given. This does not mean that boys should be kept at work hoeing beans, weeding onions, picking berries, or digging potatoes merely to realize an income for the school. Such things they are to do, of course, but they are to be taught at the same time the principles and the art of gardening as if they were to become practical gardeners. It has been found difficult and well-nigh useless to interest city boys in country life and in farming. Nearly always after their release from reformatories or industrial schools, back they come to the city. Therefore, gardening is the utmost that it is thought wise to attempt in this direction in the Boston Parental School. And the 30 acres of land this school is to occupy will afford good opportunities for horticultural instruction.

10. Domestic service and instruction in other forms of labor should fill four hours a day.

11. The study of lessons, the reading of books, the play, the meals, and all other employments of the day which admit of it should be incidents of the family life in the cottages. Segregation, not congregation, should be the ruling principle in all arrangements for instruction and employment.

12. The buildings considered necessary are these: (1) A central building for the offices, superintendent's apartments, kitchen, laundry, bakery, and store rooms. (2) A schoolhouse and chapel, the class rooms being on the first floor and the chapel, large enough to hold the entire school, on the second floor. (3) Cottages neat and substantial, but not too costly, three or four to begin with, supposing the number of boys not likely to exceed a hundred for the first two or three years.

13. The grounds should be inclosed with a fence or a wall of no more than the ordinary height. No provision against escapes is desirable.

---

[1] The writer regrets to say that in the new buildings constructed for the Parental School this limit has been raised to fifty boys. This is believed to be a serious error, not to be excused by considerations of economy.

[2] This is another point upon which considerations of economy will be apt to outweigh moral and social reasons in the minds of average municipal legislators.

14. That the chiefly important thing in the whole business is to secure the appointment of a superintendent well qualified for the very peculiar and exacting duties of the position hardly needs to be said. And yet the greatest danger of failure lies just at this point. Qualified men can be found; but appointing boards are not always qualified to find them, or appreciate them when found.

15. But the greatest evil of all, and one to be guarded against at all points with the utmost care is the abuse of the pardoning power. Somewhere, of course, must be lodged the power of releasing the boy from further detention, either conditionally or absolutely. The danger that this power may be placed where it will be wrongly used can not but be obvious to all who are familiar with the character and workings of municipal governments in this country. The principle should be this: Release from the school *always* to be earned by good conduct, industry, and learning on the part of the boy while in the school, *never* by influence acting from outside. The importance of this principle can hardly be overestimated; and yet to secure a wise and steady course of action in accordance with it may become, under unfavorable conditions, an impossibility.

16. What is known in penology as the indeterminate sentence should be applied to all reformatories and truant schools, provided this can be done under conditions that will secure the right working of that principle. The indeterminate sentence is a sentence which the convict may make as short as he chooses by reforming himself and proving that he has reformed himself by pursuing a steady course of right conduct for a sufficient length of time; in other words, by repenting and bringing forth fruits meet for repentance.

This principle would work admirably in a truant school, provided always it were rightly applied and not interfered with by irrelevant outside influences. Let the truant be brought into court at the earliest stage of the truancy habit. Let it not be a criminal court, but if possible the probate court or some court not ordinarily exercising criminal jurisdiction. Let the decree of this court place the truant school in *loco parentis* over the truant until he reaches the upper limit of age for compulsory school attendance, say 14 years. Such a boy might be 10, 9, or even 8 years old at commitment; but the period of detention would depend on the boy, and might be shortened to a few months by industry and good conduct on the boy's part. His first release should usually be conditional, so that the truant school could resume personal custody of him at any time if he failed to deserve his license. The chiefly important condition of his license would of course be regular attendance at some designated day school. A weekly report of his attendance should be sent to his guardians at the truant school. The condition of the boy's home and the disposition of his parents as to taking proper care of him are also important circumstances to take into consideration.

Absolute release from the truant school would come in two ways; first, by the boy's having deserved it through good conduct while in the truant school and while out on license; and, secondly, by his reaching the age of 14 years. The release coming in this latter way by limitation might or might not be deserved. If not the boy would probably soon behave in a way to deserve commitment to a reformatory for older boys on a complaint before a criminal court. Still it would be true that the truant school had done all that was possible to be done for him. The younger the boy when first brought under discipline for truancy the greater the chance of a complete cure before the age of 14. The great and crying evil throughout the country to-day is that for want of proper means for dealing with truancy in its earlier stages it is neglected and allowed to ripen into juvenile criminality and later into adult criminality.

CHAPTER XXVI.

COEDUCATION OF THE SEXES IN THE UNITED STATES.[1]

The policy of the coeducation of the sexes, which is widely extended in this country, becomes periodically the subject of special discussion and agitation. It was so a little more than two decades ago, when the demand for provision for the higher education of women had become general throughout the North and the Northwest sections. Unexpected resources for meeting this demand became available through the action of the Federal Government, appropriating (1862) about 10,000,000 acres of land for the benefit of agricultural and other colleges. In the Northwestern States this land grant was regarded as a provision upon which women had the same claim as men, consequently the colleges in that section which received the benefit of the grant were, as a rule, opened to both sexes. This action, and the influences that about the same time gave rise to colleges for women (Vassar, 1861; Wellesley, 1870, and Smith, 1871), whose requirements were of the same order as those of the arts colleges for men, excited widespread interest and caused every phase of the problem of woman's education to be earnestly canvassed. The physiological and hygienic aspects of the problem were at that time brought into special prominence by Dr. E. Clarke, of Boston. His work, Sex in Education, was virtually a protest against coeducation. The book carried great weight from its scientific tone, and its arguments are still the strongest that are adduced against the policy. Briefly summarized, Dr. Clarke's argument appears to be that girls are naturally incapacitated for the sustained and regular work which boys bear without injury; consequently, the two should not be educated together.[2]

Vigorous replies were immediately forthcoming. Especially notable among these were two books, Sex and Education and The Education of American Girls. The former comprised thirteen essays by well-known social and educational leaders, together with testimony from leading coeducation colleges, in support of their policy. In a contribution to the book, Thomas Wentworth Higginson pointed out the chief weakness in Dr. Clarke's argument, i. e., the want of a sufficient basis of facts.[3]

At that time indeed no systematic effort had been made to collect and sift the facts as to the actual effects of coeducation in places where it was already practiced. The want has since been well supplied by the collection of vital statistics published by the Collegiate Alumnæ Association, and by a similar collection in England—Health Statistics of Women Students at Cambridge and Oxford and of Their Sisters[4]—due to the efforts of Mrs. Henry Sidgwick. The book entitled The Education of

[1] Prepared by A. Tolman Smith. [2] See citation, pp. 839, 840. [3] See citation pp. 840, 841. [4] See pp. 841-844.

American Girls comprised also thirteen essays by women of large and varied interests, professional, public, and social, and was ably edited by Miss Anna C. Brackett. Against scientific theories these writers offered the results of extended observation and of actual experience in the acquisition and effects of mental discipline. These several works, and the opinions and discussions scattered through school reports of the period, are still the sources of the principal arguments advanced on either side whenever the subject of coeducation is reopened.

Again, about 1880, the subject was widely discussed with special reference to the conduct of public high schools in the larger cities. To meet the demand which arose at that time for precise information on this phase of the problem, a special inquiry was instituted by the Bureau of Education calling for the facts, and also for opinions of superintendents, with respect to the operations of mixed schools and classes. The results of this inquiry were embodied in Circular of Information, No. 2, 1883.

The past year has witnessed a great revival of interest in the subject, with a corresponding call upon this office for information relating thereto. As regards our own country, this interest is most active in the Southern States. It is there due in part to the development of high-grade public schools, and in part it arises from the recent efforts of young women to secure admission to Southern universities. Inquiries from that section relate not only to the fact of coeducation, but also to its economy and efficiency as compared with separate education, and, where higher institutions are concerned, to its effect upon scholastic standards, and upon the moral and physical well-being of students.

Foreign countries, especially France and Germany, are largely represented in the correspondence on this subject. It was a matter of constant inquiry on the part of the foreign delegates to the congresses of education held in connection with the Columbian Exposition, several of whom had, in fact, been specially commissioned by their governments to investigate and report upon this feature of the American school policy. In view of these circumstances, it was deemed advisable to issue a special inquiry in order that the present status and tendencies of our public-school systems in this matter might be fully disclosed. Inquiries were accordingly addressed, one to superintendents of State and Territorial systems and a second to city superintendents. At the same time an analysis of the statistics of higher institutions, i. e., colleges and universities, was made in order to ascertain their position also in respect to coeducation. The results of these inquiries and investigations are here presented, together with citations from the literature which the subject has called forth during the periods of agitation above noted.

I.—Status of Public Schools with Respect to Coeducation.

A. STATE SYSTEMS.

The letters of inquiry addressed to State superintendents comprised the two following questions:

(1) In what cities and towns of your State are the boys and girls taught in separate classes in the public schools?

(2) In how many country public schools in your State are the boys and girls taught in separate classes?

A request was also made for additional information or opinions bearing upon the subject. Replies received from forty States and four Territories[1] present the following particulars:

[1] No replies from Alabama, Arizona, Colorado, Michigan, Pennsylvania.

Hon. C. W. Bean, State superintendent, Washington:

There are a few schools for separate education of the sexes in this State, but they are under the control of churches. These supply the demand for such teaching, and under these circumstances the public sentiment in favor of coeducation in the public schools is very strong. Most of those who favor separate education do not appear as very strong advocates of a public-school system at all.

B.—CITY SYSTEMS.

The inquiry addressed to city superintendents sought not only to ascertain whether coeducation or separate education is the rule, but also the grades, if any, in which boys and girls are not taught in the same classes. From the summary of the replies of city superintendents given below it will be seen that in 586, or 93·3 per cent, of the 628 cities represented boys and girls are educated together in all the grades.

Status of the public schools in cities with respect to the coeducation of the sexes (i. e., the instruction of boys and girls either together or separately).

	Total number of cities reporting.	Number which have adopted coeducation in all grades.	Number in which boys and girls are taught separately in some or all grades.					
				Distributed.				
			Total.	All grades.	High schools.	Grammar or intermediate.	Primary grades.	Part of the schools irrespective of grade.

The cities included in the table in which coeducation is not universal may be considered either individually or by groups. Of the 50 principal cities enumerated by the United States census of 1890, 40 are represented in the replies here considered.[1] In 27 of these boys and girls are educated together in all schools. In 4, Philadelphia, Pa.; Newark, N. J.; Providence, R. I.; Atlanta, Ga., the sexes are separated in the high schools only. In Providence this seems to be an outcome of the policy of elective courses.

Superintendent Tarbell says:

The classical department of our high school teaches both sexes. The English department teaches a portion of girls separately, 413 in number. The manual training high school teaches boys only, 150 in number.

Hon. Thomas R. Stockwell, the State commissioner of public schools, also says:

In the Providence high school there was originally a department for girls alone, but for several years the girls who were fitting for college have been taught in the same classes with the boys, and now girls are admitted into the new manual high school and several of the classes in the girls' department have been united with classes in the same subjects in the boys' English and scientific department.

I consider the change of policy here in Providence very suggestive, for the plan of separate schools for boys and girls in the high school has existed ever since the school was started, and has been most ardently advocated by some of those most interested in the schools. I think it shows that coeducation is being more and more recognized as the proper method in all grades.

In Newark, in former years, there were separate classes for boys and girls in some of the grammar schools in the upper grades, i. e., seventh and eighth years. These have been abolished, but the separation is maintained in the high school. In 2 of the 50 principal cities, San Francisco, Cal., and Wilmington, Del., boys and girls are separated in all grades above the primary. In 6 cities, New York and Brooklyn, N. Y.; Boston, Mass.; Baltimore, Md.; Washington, D. C.; Louisville, Ky., separate and mixed classes are found in all grades. This is a matter of policy in some instances, of circumstances, i. e., location, original arrangements, etc., in others, as appears from the following statements by the superintendents of the respective cities:

Hon. John Jasper, New York City:

As a rule boys and girls are taught in separate classes, but there are classes of grammar grades in which both sexes are taught together, and there are many more classes of primary grades in which the same state of affairs is found. It is impossible from the nature of our reports to determine the number of classes in which both sexes are taught together. It is an almost invariable rule to teach the boys and the girls in separate classes where the numbers are large enough to permit this separation.

Hon. W. H. Maxwell, Brooklyn, N. Y.:

It is the policy of our board of education to teach boys and girls in separate classes. It is not, however, always practicable to do this under our scheme of class organization. Out of a total registry of 96,054, at the close of last year, 16,160 were taught in what we denominate as "mixed" classes, that is boys and girls in the same class. The sexes are quite evenly divided, being at the close of the year, 47,963 boys and 48,091 girls. The proportions of boys and girls in the mixed classes will probably hold about the same.

Hon. Edwin P. Seaver, Boston, Mass.:

First. Boys and girls are taught separately in the Latin schools.

Second. They are taught separately in the high schools of the old city, namely, in the girls' high and in the English high (boys).

[1] The ten cities of this group not replying are New Orleans, La.; Fall River, Mass.; Omaha, Nebr.; Trenton, N. J.; Cincinnati, Cleveland, Columbus, Dayton, O.; Reading, Pa.; Milwaukee, Wis. It appears from current reports that coeducation is the rule in all these cities, with the exception of the high schools of New Orleans.

Third. They are taught together in the suburban high schools in Roxbury, Dorchester, Charlestown, West Roxbury, Brighton, and East Boston.

Fourth. They are taught separately in 25 of our 59 grammar schools. In the other grammar schools they are taught together.

Fifth. They are taught together in all primary schools and kindergartens.

This unsystematic state of things was brought about by Boston's annexing the neighboring cities and towns without changing the organization of the schools more than was absolutely necessary.

Hon. Henry A. Wise, Baltimore, Md.:

The boys and girls in the primary, grammar, and high schools of Baltimore, except in a few instances, are taught in separate schools. Number of pupils on rolls December 31, 1892, 54,406; pupils in schools in which boys and girls are taught together, 11,785; pupils in schools in which boys and girls are taught separately, 42,621; boys taught in classes in which there are no girls, 21,300; boys taught in classes in which there are girls, 5,785; girls taught in classes in which there are no boys, 21,321; girls taught in classes in which there are boys, 6,000.

Hon. W. B. Powell, Washington, D. C.:

In most of our schools the boys and girls are taught together. Owing to the location and arrangement of school houses, we are compelled to separate the sexes in some schools below the high school. The number of such schools is 32, and the number of pupils attending there is 3,128 (1,506 boys, 1,622 girls) on a total enrollment of 25,262.

In three of the four high schools of the first six divisions boys and girls are taught together. In the Central high school they are taught separately.

This statement relates to white schools only. The superintendent of colored schools, Hon. G. F. T. Cook, says with respect to these:

In my opinion a very material factor in the promotion and maintenance of good discipline in these schools is its system of coeducation of the sexes, which, beginning with their establishment, has since uninterruptedly continued.

Not only in the advantages accruing to discipline, but in other respects essential to progress, has the wisdom of this education of the sexes been shown. Healthy competition has been stimulated and keen, active thought awakened. To the rougher nature of the boy have been imparted tone and refining influences; to the gentler nature of the girl, strength and elasticity. The enrollment of boys is less than that of girls, being about 43 to 57. In the primary schools they are more nearly balanced than in the grammar, in the former the ratio being about 12 to 13, and in the latter 17 to 33.

The enrollment of boys to girls is now 44 to 56.

Hon. Wm. J. McConathy, assistant superintendent, Louisville, Ky.:

(1) There is no inflexible rule in our schools below the high school in reference to sex in class. About one-half of the classes contain boys and girls.

(2) The number of boys taught in mixed classes is about 5,000.

(3) The number of girls about 5,100. We do not find that mixing the sexes works any injury; on the contrary, it generally benefits the school.

Denver, the remaining city of the list, presents unique conditions. With a population of 106,713, the city is divided into three school districts, each having its own superintendent. In two of these, i.e., district No. 2, superintendent, Hon. L. C. Greenlee, and district No. 17 superintendent, Hon. J. H. Van Sickle, coeducation is the rule. but in district No. 1, superintendent, Hon. Aaron Gove, the boys (5,043 in 1893) and girls (5,018) are in separate classes.

Following the classification of the United States census, there are besides the 50 principal cities above considered, 393 cities having a population of 8,000 and upwards; of these 287, or 73 per cent, responded to the inquiry on coeducation and of this number 20 only report separate classes for boys and girls, a very much smaller proportion (7 per cent) than was found in the group of 50 principal cities (32.5 per cent). Separate classes in the high schools or high-school grades only, are reported in 5 of these cities, i.e., Augusta and Macon, Ga., Covington, Ky.; Hagerstown, Md.; Burlington, N. J.

Hon. W. C. Warfield, superintendent of public schools, Covington, says:

Our eighth year grade pupils are taught in separate classes; 62 boys and 71 girls are now enrolled in this grade.

A part of our seventh year grade pupils are taught in separate classes; 31 boys and 38 girls are so taught. I am now watching the results of separate classes for boys and girls. If a school were provided with A 1 teachers, I think separate classes would not be necessary. At the present time I am of the opinion that little or nothing is gained by separating the boys and girls into different classes or rooms.

Montgomery, Ala., which belongs to this group of cities, has a high school for girls but none for boys.

In the following cities of this group separate classes are the rule: Vicksburg, Miss. (in white schools only), Lebanon and York, Pa., Alexandria, Va. There remain 10 cities whose population is 8,000 inhabitants or more, in which separate classes are maintained in particular grades or in part of the schools irrespective of grade. This appears to be occasioned by the location or plan of the buildings, or to be the esult of long-standing custom in particular schools. The cities and grades specified are as follows: Newburyport, Mass. (primary and grammar); Salem, Mass. (one grammar school); New Brunswick, N. J. (primary and grammar); Union, N. J. (grades first to seventh, inclusive); Peekskill, N. Y. (first and second year); Raleigh, N. C. (fourth to seventh years, white schools); Allentown, Pa. (few primary schools); Harrisburg, Pa. (primary and grammar, few schools); Reading, Pa. (high school and some schools of lower grade); Columbia, S. C. (part of the schools, fourth to tenth grades).

The following additional particulars furnished by the superintendents named, show very clearly the causes of these varying usages:

Dr. William A. Mowry, Salem, Mass.:

The old school (grammar and primary) was for boys; later arose a girls' school. So now, "down town" as we call it, there are (1) one grammar school for boys; (2) one grammar school for girls; (3) one primary for boys, and (4) one for girls. In the rest of the city are three grammar and ten primaries for boys and girls both. The high school is for both, although the boys sit in separate rooms from the girls. They recite together.

Hon. Otto Ortel, town of Union, N. J.:

There is no special reason why boys and girls are separated in our schools except for convenience, our buildings being located in the center of a large plat of ground, thus giving a large yard or playground on each side, and consequently no crossing other rooms or halls in entering or leaving. About 750 girls and 725 boys are in separate classes; about 130 girls and 120 boys in mixed classes.

Hon. Edward P. Moses, Raleigh, N. C.:

We are limited in Raleigh by special legislative enactment to seven grades, or seven years of school work. In the colored schools boys and girls are taught together in every room. The sexes are not separated, because of the fact that the different buildings are widely scattered. In our white schools the pupils during the first three years of school are permitted to attend that building most convenient to their homes, the boys and girls being taught together. In the fourth, fifth, sixth, and seventh years of schools, the sexes are taught in different buildings. It is proper to add, however, that, at the request of parents, girls are permitted to attend the boys' school, though no boys are allowed in the girls' school beyond the third grade.

Hon. L. O. Foose, Harrisburg, Pa.:

At one time the sexes were separate in all schools in this city. The sexes are educated together in same room in all but a few buildings in the older part of the city. The number of distinctively boys and girls' classes is becoming less each year, and in a few years we will have coeducation throughout the city. The two high schools, each for a different sex, were recently united into one school with one course of study. What we now have of the separate schools is what still remains of the old order of things. There is but little sentiment against mixed schools.

There remain the following nine cities, with populations below 8,000, that report the separate education of the sexes: New Castle, Del. (intermediate and grammar grades); Marysville, Ky. (intermediate and high); Columbus, Miss. (white school, all grades except high schools); Matteawan, N.Y. (first to third primary); Chambersburg, Pa. (all below grammar grade); Carlisle, Pa. (all except first primary and high white schools; coeducation in colored schools); Danville, Pa. (high school); Mauch Chunk, Pa. (one school); Corpus Christi, Tex. (prior to 1893, all grades; 1893, sixth to eighth grades only). The reasons for the special conditions here noted are much the same as those advanced in the larger cities.

Peculiar conditions are noted in a few instances. Superintendent W. H. Hockenberry, of Chambersburg, Pa., says:

Until the present year our high school was in two departments, one for each sex, making really two schools, but after five or six years' hard work the present board decided to unite the schools.

The secretary of the Carlisle school district says with respect to the white schools of the district:

After the children have passed the first grade primary department they are separated, and do not come together until they reach the high school grade. In this interval we have six schools for girls, taught by lady teachers, that have 252 girls on the rolls, with an average attendance of 240. There are five schools for boys, two of which, second grade of the primary department, are taught by lady teachers, the others by men. In these schools there were 255 boys, with average attendance of 236.

From the organization of the schools in 1836 to 1888, the white boys and girls were separated after they had passed through the first grade primary department, and never came together again, as we had a boys' high school and a girls' high school in different localities and under different teachers. In September, 1888, this scheme was changed as above stated, and now the boys and girls, after having been separate in the intermediate grades, are brought together in the high schools, and, as we think, with the very best results in the manners, morals, and attainments of the scholars of both sexes. It is now a question with our board whether there should not be coeducation in all the grades of the white schools, and I should not be surprised if it shall be so ordered as soon as suitable buildings and grounds are obtained.

The results of the inquiries here summarized agree substantially with those of the similar inquiry of 1883. They are somewhat more comprehensive, as the replies from State superintendents and from 74 small cities cover fully the facts which are brought out in the earlier inquiry by returns from 144 towns and cities of less than 7,500 inhabitants, while the number of cities of larger populations comprised in replies to the present inquiry is more than three times the number that responded in 1883. Three-fifths of this number (133 out of 196) are represented in the replies to the present inquiries. In 5 of these cities, viz, Belleville, Ill.; Marblehead, Mass.; Easton, Pa.; Knoxville, Tenn., and Austin, Tex., change from the separate to the coeducation policy has taken place since the earlier inquiry. The superintendents of schools in 3 of the cities that have thus come over to the majority comment as follows:

Hon. H. D. Updike, Belleville, Ill.:

Neither discipline nor instruction suffers in consequence of coeducation of the sexes.

Hon. J. B. Gifford, Marblehead, Mass.:

Until two years ago, boys and girls of our grammar grades were taught separately. We think that the change has been a great benefit intellectually and morally.

Hon. W. W. Cottingham, Easton, Pa.:

The policy of this city (Easton, Pa.) in the matter of the coeducation of the sexes was adopted several years ago, and the schools of every grade, from the high

school to the lowest primary, have been, and are still, organized, classified, and taught agreeably thereto. The scheme as affecting the moral, social, or intellectual condition of the pupils has been attended with results that are gratifying, and especially so when compared with what was attained under the old system of separate sex assignment and instruction.

These results leave no doubt as to the position of our public schools with respect to the coeducation of the sexes. It is the policy generally pursued, heartily indorsed by supervising officers and strongly supported by the people in all sections of the country. The "common," or public school, of the United States is, as it has ever been, a school where boys and girls mingle as they do in the family. If additional proof were needed that parents favor this policy, it would be found in the fact that a little less than two-thirds of the private schools of the country are coeducational and that these enroll a little more than two-thirds of all the pupils in private schools. As the public school is the only school that three-fourths of the people ever attend, the association of the two sexes as there maintained must have a very great influence upon their social and business relations in after years. It explains, in a great measure, the freedom that women enjoy in this country with respect to the pursuit of careers, and especially the large share which they take in the educational work of the country. Where boys and girls are accustomed from early years to compete in intellectual exercises, they entertain a due respect for each other's powers, and false notions as to the natural endowments of each are dissipated. Relations which would cause great irritation and annoyance in countries where separate education is the rule, here come about naturally and without friction.

As regards the teaching profession the policy begun in the elementary schools, persists through the public, secondary, or high schools, obtains very largely in private secondary schools, and is gradually extending to the highest institutions. This is indicated in Table I (p. 797), which shows the proportion of women teachers in all classes of institutions above the elementary grade of the public schools. In the public schools (all grades included), 66 per cent of the teachers are women. Their relation to the public schools does not stop here. They participate as school officials, and also through the exercise of the ballot in the local conduct of school affairs.

The extent of this participation is shown in the following table:

*Status of women with respect to the direction of public education in States and Territories.**

States in which women may vote for school officers or are eligible for the same.	Classes of school officers for whom women may vote.	School offices to which women are eligible.	Number of women holding county or township offices so far as reported in 1891-92.	Remarks.
North Atlantic Division:				
Maine		Township		*a* Three women have been appointed on State board.
New Hampshire	District†	All		*b* If possessing the legal qualifications.
Vermont	County, town, district.†	County, town, district.		*c* In districts organized under the general school laws; i. e., nearly all in the State.
Massachusetts	Township†	Township *a*	5	*d* As directors or comptrollers

* Vote affects disposition of school money.

REMARKS UPON THE TABLE.

From an examination of column 2 it will be seen that in sixteen States and one Territory school suffrage for women is limited to district officers; in four States it includes township and county officers. In the three remaining States and one Territory women may vote for all elective school officers. The right thus broadly stated goes no further, however, in its essence than the apparently more restricted suffrage of the following States: New Hampshire, Massachusetts, New Jersey, and Minnesota, since, in these, offices not included in the woman's vote are filled by appointment.

It would seem probable that women would be eligible to the offices for whose incumbents they may vote. This is the case (column 3), excepting in Mississippi, where women who are the heads of families may vote for district school offices, but may not fill the same. We catch a glimpse here of the underlying conviction which has given rise to the whole movement; it begins with a recognition of woman's right, as a natural guardian of children, to exercise her judgment in respect to their education, and ends with the demand for her service as a public expediency. In a few States, included in the above lists, women are eligible to school offices other than those included in the suffrage accorded them.

These additional positions are filled by appointment, by vote of school boards, or by vote at a general election, in which women can not participate. This reminds us that, while there is a strong disposition to separate the educational from other civil affairs, the end has not been completely attained. Thus, questions of school tax and school appropriations can not always be managed apart from financial matter in general. The woman's vote extends in some degree to these matters in sixteen States, as will be seen by the references to the footnote. The number of women holding positions above the grade of district officers (column 4) is small. No statistics of the district officers is available.

It should be noted that in many States cities form districts under special school laws; where this is the case they are not included in the table. As a rule, however, women are eligible to the school boards of Northern and Western cities. Among the cities in which they are now serving in this capacity are Boston, New York, Buffalo, Chicago, Indianapolis, and Detroit.

II.—Coeducation in Colleges and Universities.

While inquiries from foreign countries with respect to coeducation relate almost entirely to the public schools, those emanating from the Southern States have chief reference to the effect of the policy in colleges and universities and the conditions under which it is maintained in these higher institutions.

Sixty years have passed since Oberlin College, Ohio, gave the first example of a coeducation college in this country. In 1880 a little more than half the colleges, 51.3 per cent, had adopted the policy. In the decade 1880 to 1890, the proportion increased to 65.5 per cent. This decade was also characterized by the number of leading institutions that opened their doors to women. These, however, were all located in the Northern and Northwestern States. In the present number of coeducation institutions are included 24 State universities and 8 private foundations of the highest order.

The former are: California, Colorado, Idaho, Illinois, Indiana, Iowa, Kansas, Michigan, Minnesota, Mississippi, Missouri, Nebraska, Nevada, North Dakota, Ohio, Oregon, South Dakota, Tennessee,[1] Texas, Vermont, Washington, West Virginia, Wisconsin, Wyoming. The latter are: University of Pennsylvania; Columbian, Washington, D. C.; De Pauw, Cornell, Boston University, Brown, Vanderbilt, Yale (graduate department).

Harvard University and Columbia College, New York, whose action with respect to provision for women is everywhere followed with deep interest, seem for the present to have decided against coeducation. Harvard by its efforts for the establishment of Radcliffe College for women, and Columbia by similar efforts in behalf of Barnard College.[2]

It will be observed that Vanderbilt University and the universities of Mississippi, Tennessee, and Texas are the only Southern institutions of high repute or large possibilities included in the foregoing enumerations. Coeducation is indeed a feature of many Southern colleges. This would be inferred from the statistics showing number and proportion of women students in colleges and universities (tables I and II appended).

The comparative view (table I) would indeed seem to indicate that this policy is more general in the South Atlantic and South Central divisions than in the North Atlantic, but the comparison is misleading unless it be considered that, as a rule, the highest institutions of the Southern States are not included in the number practicing coeducation, and furthermore that the significance of the showing is modified by the special character of the courses in which many of the women students are enrolled.

The colleges for colored people which form about 15 per cent of the whole number included in the statistics of the South Atlantic and South Central divisions also lessen the force of the comparison, as these must, of necessity, be adapted to the special circumstances of their students. The present agitation of the subject in the South arises from the desire of Southern women to secure admission to institutions like the University of Virginia, University of Alabama, etc.

In several Southern States opposition has been made to the opening of the universities to women on the ground that the number of women desiring these privileges is too small to justify the changes involved. To this it has been replied that the expense and labor incurred would

[1] June, 1893.

[2] For further accounts of these measures, see pp. 856–859. As this matter goes to press the report is received that Harvard has opened its graduate courses to women.

be offset by the advantages of retaining at home the girls who now seek in Northern institutions the opportunities denied them in their own States. This has raised the question as to the actual number of Southern girls who attend Northern colleges and universities. To satisfy inquires on this point an investigation has been made of the current catalogues of Northern institutions, i. e. coeducation colleges and universities, and seven colleges for women only.[1]

From this investigation it appears that 376 young women from the Southern states are enrolled in eighty-one Northern colleges and universities. If the number of these students in preparatory departments (27) be omitted, the remainder (349) is very nearly 20 per cent of all the Southern girls reported in colleges North and South for the current year.

The distribution of the Southern students above referred to by States and college departments is as follows:

Total number of women students from each Southern State and distribution by departments.

States.	Preparatory.	Collegiate.	Other departments.	Total.

The facts here considered, with the tables appended, answer in part only inquiries as to coeducation in colleges and universities. As regards the conditions under which this policy may be maintained and its effects upon students and scholastic standards, only those having personal experience in the conduct of the institutions can speak with authority. Hence copious citations from the reports of college presidents, statements of professors, etc., are included in this chapter under the head of the literature of the subject.[2] A single consideration

[1] Mount Holyoke college, Smith, and Wellesley, Massachusetts; Elmira, Vassar, and Wells, New York; Bryn Mawr, Pennsylvania.

[2] See pp. 846–859.

which lies a little outside of our subject, but has nevertheless an important relation to it, must complete this part of the discussion. Experience abundantly proves that without the aid of scholarship funds many of the most promising students among young men would never be able to push their studies beyond the public schools. This is equally the case with young women; unfortunately, very little help is afforded them in graduate and professional courses which are directly preparatory to remunerative careers.

The situation in this respect is shown in the following table:[1]

[1] Prepared by Mr. Lewis A. Kalbach, of this Bureau. For details by institutions see Commissioner's Report for 1890–'91, pp. 836–842.

From these statements it appears that of funds for the aid of undergraduates about one-third are available for women; the proportion is a little less than one-fifth in the case of endowed fellowships, and falls to an insignificant sum in the total of graduate scholarships.

III.—THE LITERATURE OF COEDUCATION.

The literature of coeducation consists of arguments *pro* and *con*, *a priori* theories, accounts of actual experiments in the establishment and conduct of mixed schools or classes, and statements of results.

In selecting from this mass of matter the purpose has been to bring together the strongest arguments and the greatest range of experience pertaining to the policy. Much of this material is already before the public, but in scattered books or reports. The only new matter which the present interest in the subject has developed is found in the reports of foreign experts, deputed by their governments to study our school systems. The first place in the following compilation has naturally been given to citations from these sources. To the European observer coeducation appears the most striking feature of our educational system. Its

causes they discover in social conditions radically unlike those which obtain in the Old World, and it must, as they foresee, forever tend to extend and perpetuate these differences. To these relations they are naturally more alive than we ourselves, among whom they have spontaneously developed. We should, however, bear them in mind in weighing the views of our foreign critics as to the purely scholastic effects of the policy under discussion.

COEDUCATION OF BOYS AND GIRLS.

[From report of Dr. E. Schlee, of the Realgymnasium of Altona, Prussia, delegate to the Educational Congress at Chicago.]

A very common, although not universal, feature of the American public school is the coeducation of the boys and girls, not only in the primary schools (cities) and in the country schools, as is also the case with us, but also in the grammar and high schools of cities. Furthermore, the sexes are not separated in the normal schools (*Lehrer-Seminarien*), in colleges, and even in universities. In Chicago coeducation is the invariable rule; in Boston and New York union and separation are both found. To us it seems strange, at least, to see, if only in photographs, boys and girls not only of 13, but even of 16 years of age, sitting together or standing in mixed rows, going through free gymnastics and exercises with wands. It is to be noticed, however, that they have single desks; also, that generally the teacher is a lady, even for the free gymnastics. All special rooms (i. e., toilet rooms, etc.), and the playground are strictly separate for boys and girls. This coeducation has not been without opposition; especially in Boston where the system has already been twice severely attacked. Ten years ago Dr. Clarke attributed to this the fact, which, however, was elsewhere disputed, that American ladies of the higher class were not very good housekeepers and mothers. The Commissioner of Education[1] obtained reports from 300 cities and towns, and these were on the whole favorable to mixed schools. He therefore commended this policy, arguing that if we must live together we must be educated for that purpose; to educate the sexes separately is to change the natural order of things.[2]

Later Dr. Philbrick stated that by this means (coeducation) the peculiar form of education best suited to the different sexes was prevented. But the Commissioner responded[3] that Dr. Philbrick had had no experience in mixed schools and that the statistical returns showed only favorable results as far as regards conditions of health. At the same time the good effects upon morals were mentioned which had resulted from coeducation in Norway and Finland, and reference was made to the unfavorable effects of the monastery education in France.

A schoolman of large experience also personally told the writer that coeducation had a favorable effect on the general behavior, on the bearing of the pupils toward each other, and on the whole discipline. Germany takes in this respect, perhaps, the right medium between France and America, but if one observes how beneficial in general is the comradeship of the children of intimate families one might, where the nature of the studies and where outer circumstances, especially in smaller places, make the union desirable, consider that the American way would be advantageous in our country also.

The discipline, indeed, is not as strict as in Germany. Whilst formerly in America corporal punishment is said to have taken place often enough it is now everywhere forbidden in the public schools.[4] Also deprivations of liberty seem not to be practiced. Where admonition does not avail, temporary exclusion from school by the principal of the school for not more than a month, by the school superintendent as long as a quarter of a year, or expulsion from school, is the only means. And yet the American educational method, by reason of the many recitations of the individual scholars, gives abundant cause of disturbance and trouble of which much complaint is made.

---

[1] Gen. John Eaton.

[2] Hon. Andrew Jencks, superintendent of schools, Pawtucket, R. I., in Circular of Information, No. 2, 1883.

[3] The reference here is to the following observation by Dr. Harris in response to an inquiry from Dr. Voss, of Norway: "With regard to Mr. Philbrick's judgment on the subject of coeducation, I think that he stood almost alone among our ablest writers on education in his opinion. The Boston schools under his charge educated the sexes separately. It may be that his experience in that city had undue influence on his opinion." [Ed.]

[4] *Corporal* punishment in public schools is forbidden by law in the State of New Jersey, and in many *cities* by school law or by school boards. The prohibition is far from universal, but public opinion is very generally opposed to this form of punishment. [Ed.]

In discussing the teaching force of our schools, Dr. Schlee dwelt also upon the spectacle, novel to a foreigner, of the general presence of women side by side with men in various business and professional pursuits. He expressed the opinion that this transfer of women from the domestic circle into careers competitive with men increased "the restlessness, haste, and intense strain in all relations of life."

Prof. Stephan Waetzoldt, of the University of Berlin, chief commissioner of the German educational exhibit at Chicago, says:

"No distinction in the quality, kind, and aim of instruction is made in any of the elementary schools for boys and girls. In the old States the sexes are not, as a rule, instructed together in second schools, but in the central and western States they sit together from the primary school to the university, the latter included. This is the system of coeducation, the education common for both sexes so highly commended by Americans. At the congress of education at Chicago this subject was often discussed, and not one disapproving voice was heard. At first I was altogether misunderstood when I explained that our views on the education of girls differ essentially from those of Americans. They see only the advantages of coeducation, believed to refine the boys and strengthen the girls, and we must accept these peculiar conditions just as in domestic life. The intercourse of boys and girls, of adults and children, is altogether different from what it is among us, and I doubt whether it has a moral advantage. Certain it is, however, that the girls on the average are more intelligent than the boys; they go to school longer. In the high school of Chicago the proportion of girls to boys is 3:2. As business and politics take up the men's entire time, the women have become the supporters of the higher intellectual interests and the protectors of intellectuality in domestic life."

Prof. Emil Hausknecht, of Berlin, for several years professor in the National University at Tokyo, says on the subject of coeducation in America:

"As a makeshift, coeducation is better than nothing. As a principle, it entirely ignores the needs of the separate sexes, arising from the differences in the development of boys and girls. Boys and girls from the ages 14 to 18 must be differently treated, both in regard to the intellectual and emotional nature. Coeducation is possible, however, in America more than in Germany or elsewhere, because custom and education have given to the girl and the woman greater freedom and determination in their manners and appearance, but also give them strong protection against encroachments and improprieties. Coeducation is possible in America also, because the week has only 5 school days, Saturday being a holiday, and the school day has only 5 lessons, of which one is usually a study hour. Besides, grammar and high schools require much less severe intellectual efforts, and a much more concentrated and simple exertion of the mind than is required in our secondary schools for boys."

THE COEDUCATION OF THE SEXES IN THE UNITED STATES.

[Extract from a report to the minister of the public instruction, France, by Mlle. Marie Dugard, delegate to the Chicago Congresses of 1893.]

Of all the features which characterize American education, perhaps the most striking is the coeducation of young men and young women, whether in the public schools (primary and grammar schools) and in the high schools, or in the colleges, the scientific schools, and universities. At least it is most striking to a French observer, for it reveals to him a state of mind and of habits which is entirely strange to him. The sight of youths of 16 to 18 years, almost men, working, chatting, and enjoying daily comradeship with young ladies, who, by reason of their distinction, elegance, and often a precocious beauty, seem not at all like students, confounds all his ideas. He is astonished that such an ideal should have sprung up in the healthy American mind, and he does not dare to think of the results, so opposed do they seem to his moral sense. How the United States have come to adopt coeducation, a glance at their origin enables one easily to understand.

When the settlers fixed themselves in America, their first concern after having cleared a place, built log houses, and provided for the necessities of the material life, was to organize schools to the end, according to an expression of an ordinance of Massachusutts, "that the knowledge of their fathers might not be buried with them in their tombs;" but as they were too poor to give to every village two school buildings, they opened only mixed schools, where the pupils of the two sexes received the same instruction. This system, which offered real pecuniary advantages without any moral danger—as the children were restrained by the bonds of relation or friendship between their families—was extended, and outlived the causes which had created it. Rich and prosperous cities covered the prairies of the settlers, palaces took the place of the log cabin of the first builder; but, among all these changes, coeducation remained.

Harmless as it is for small communities and for elementary classes, is it so still when transplanted into the new conditions of the modern life and into all orders of instruction? This is a question much agitated in the United States. It would be indeed a mistake to believe that the mixed education is so inwrought into the American customs that it never encounters opposition. In certain communities it is, on the contrary, much criticized, and several cities, especially in the East, have entirely discarded it; others retained it only in the grammar and primary schools, sometimes in the latter only.

The controversy is worth analysis, for it enables us to see the possible results of coeducation and illuminates one of the most important problems of American pedagogy.

"The organization of a being is always in harmony with the functions which nature assigns to it," say the opponents of mixed education; now the organization of woman differs much from that of man, therefore she has different functions and should not receive the same education. These principles do not involve in them the thought that woman is inferior to man.

"The highest ideal of humanity," wrote an ardent adversary of the mixed school in a book which was formerly considered an authority, rejecting any comparison of inferiority or of superiority between the sexes, "demands that each be perfect after his nature. The lily is not superior to the rose, nor the oak tree superior to the clover; neither is the beauty of the lily the beauty of the oak, nor the purpose of the oak tree the same as that of the clover." It would be a poor horticulturist who would treat them in the same way. And he adds: "If woman subjected to masculine education intended for the development of the male organization can equal man, she ought to surpass him if she receives feminine education designed to develop the organization of woman."

From these general arguments proceeds a long series of objections physiological, intellectual, and moral, which we will summarize:

Coeducation is injurious to the health of the young girls; less strong than the boys, they can not endure the same work without hurting their organism; and to oblige them to study together is to substitute for the sound emulation, which reigns in the separated schools, a morbid rivalry from which their nerves must suffer. Their excessive pride prevents them from admitting that this régime exhausts them; desirous to equal young men and even to surpass them, they study with great zeal and constantly strain the activity of their brains. The results of this overpressure, one can see to-day in the American woman, intellectual, refined, brilliant indeed, praised by Europeans on account of her spirit and grace, but pale, feeble, of a delicate beauty which soon vanishes and incapable of having a large family. Therein lies an imminent danger for the future of the race, and if this is not remedied, there will soon be a race of women, capable of being doctors, journalists, advocates, architects, engineers; in one word everything except wives and mothers.

More than this, the woman, having different functions from the man, has not been endowed with masculine intelligence, and consequently it is not reasonable to impose upon her the studies and methods which are suitable for the masculine mind. "The boys should work as boys and the girls as girls. Mary can master Virgil and Euclid as well as George, but both of them would be weakened and would not attain their legitimate end if they were condemned to the same methods. In all their work women should respect their characteristic organization and remain women and not strive to be men, or they will fail utterly. For the two sexes there exists no exception to the law that their greatest power and their greatest perfection lie in the complete development of their organism."

The differences in the intellectual development of the young people of either sex is also opposed to their common education; until the age of sixteen or seventeen years the young man has a mind less developed than the young girl; if he works with her he will be discouraged and give up efforts which do not offer him any success.

From the moral standpoint the consequences of coeducation are still more dangerous. It is a law that if two individuals live together the one who has the strongest personality becomes the model for the other. Educated with boys, the young girl, having a temperament weaker and more supple, copies the manners of the boys and loses her graces, whilst the boys do not become softer by the feminine association. Finally, it is impossible that between young men and young women associated every day in the familiarity of classes there should not be formed some romances, which the American education, it is true, renders inoffensive as far as regards manners, but which will nevertheless have disadvantages.

These objections seem judicious, and in the light of them it seems that coeducation ought to be abandoned, but it is necessary to hear how its partisans defend and justify its continuance.

It must be observed, in the first place, that besides the advantage of conforming to the historical origin of the United States and to the habits of the majority, it has unquestionable advantages; it is economical and permits the use of a part of

the school funds for the purchase of books, apparatus, etc.; it conforms to the natural method—that is, to the organization of nature and society; finally, in uniting the minds of the two sexes in the same culture, it gives them common thoughts and tastes, and so prepares for the happiness of family life, where the principal cause of dissensions is the barrier which is raised between the ideas, the sentiments, and the belief of husband and wife.

Taking up the objections of the opponents, the defenders of the policy reply to them by considerations which are not without value.

It is assumed, they say, that woman, not having the same nature as man, must not be educated in the same way. That is a poor argument, for in reality the soul has no gender. But let us admit that there exist between the man and the woman great differences on the intellectual side as on the physical; we can not draw from this an argument in favor of separate education, as the resemblances are, in spite of all, more numerous than the oppositions.

If the lily and the rose, following the figure of Dr. Clarke, require different culture, does not their common need of air, of sun, and of dew permit the horticulturist to let them bloom in the same garden? Some maintain that if woman can accomplish much with a masculine education, she would accomplish more with a feminine education. Ought one not to say the contrary, that the more dissimilar the two sexes, the more useful it is to woman to be educated with man, in order to acquire certain virile qualities which she will never possess if she remains shut up in her femininity?

It is asserted that the excessive work and the morbid rivalry of the mixed schools are injurious to the health of young women; but this dangerous emulation, and this overpressure, are not due so much to coeducation as to the general organization of modern instruction.

In the schools where the scholars of the two sexes are separated the programs are so arranged that the girls study as much as the boys, and it is often seen there that emulation degenerates into unwholesome jealousy. The delicate health of women, of which advantage is taken in this discussion, originates from causes that have nothing at all to do with mixed education. It is caused rather by the enervating dryness of the climate; by the feverish activity and the unhealthful habits of American life, habits from whose debilitating influence the less robust female suffers most, and by the unhealthful dress which custom imposes upon young women and which prevents their taking as much exercise as young men, while it makes work harder for them.

"Women, and even girls at school," says C. H. Dall, "take their studies in addition to their home cares. If boys are preparing for college, they do not have to take care of the baby, make the beds, or help to serve the meals. A great many girls at the high schools do all this."

To all these causes must be attributed the weak health of the American women, and it is entirely unjust to make coeducation responsible for it.

Resting upon the principle that woman has not the same mission as man, some contend, also, that it is not desirable for her to receive the same instruction. This reason had formerly some weight when woman remained at the fireside, confining her activity to domestic duties and depending upon her father, her brothers, or her husband for the care of her future; but times have changed; in the present state of our social organization many women are obliged to provide for their own needs and often for those of their families. Forced to work for their living like men it would be unjust to refuse to those whom nature has made more feeble, the same means of defense—that is, the same culture, the same knowledge. The opponents of mixed instruction acknowledge entirely this truth; several concede to the woman the right to have the same knowledge as man, but they add immediately that as her mind is not the same she must not acquire them in the same way, and from this difference they derive the necessity of separate education—a false conclusion, for there exists often among certain children of the same sex greater mental differences than between young men and young women, taken as a whole, and yet no one thinks on that account of providing a special teacher for them. It is the duty of the professor to use a method flexible enough to accommodate itself to the different intellectual necessities of his pupils.

To this the answer is, that when the young men work with young women whose livelier minds are more capable of assimilation, young men are discouraged. Experience has proved, on the contrary, that the feminine quickness excites the slower intelligence of the boys; if there really have been young men repressed by the success of women, it is certain that the success of a comrade of the same sex would have had the same effect.

There remain the moral objections. According to the testimony of educators, who for a long time have directed mixed schools, young women, far from becoming masculine by the contact with boys, have, on the contrary greater dignity and reserve, and the young men, in their turn, lose in the society of young girls that rough-

ness of manner and that carlessness in attitude and language which characterize the men educated apart from women. As to the last objection, the gravest of all, we have here the reply of an educator whose words have special authority, because he was partly educated in mixed schools, partly in those open to boys only, and he directed for several years the mixed schools of St. Louis:

"My observations have led me to indorse the statement of Richter: 'To insure modesty I would advise the education of the sexes together, for 2 boys will preserve 12 girls or 2 girls 12 boys innocent amidst winks, jokes, and improprieties, merely by that instinctive sense which is the forerunner of natural modesty. But I will guarantee nothing in a school where girls are alone together, and still less where boys are.' I had noticed that the atmosphere of 'mixed' schools was desexualized, where that of separate schools seemed to have a tendency to develop sexual tension. Again, whatever tendency toward indecency might manifest itself was far more easily checked in 'mixed' schools by reason of the crossfire of watchfulness which made intrigue far more difficult to keep secret. The brothers and sisters and other relatives and intimate acquaintances of the pupil attended the same school, and every act was scanned from two points of view—the boys being participants in boys' gossip, and the girls being participant in girls' gossip—and the barriers being removed within the precincts of the family, parents could not fail to have a more faithful account of the behavior of their children than when isolated in different schools. Brothers and sisters mutually protect each other from shame. Besides this, the fact that the chief association between the sexes in 'mixed' schools takes place under the eye of the teacher and in recitation, wherein the contest is purely intellectual and where the manifestation of mere femininity—softness and sentimentalism—would cause the pupil to lose rank as a scholar; and where mere masculinity—roughness and willfulness—would make an unattractive spectacle, leads one to expect that the tendency of coeducation is to elevate the standard of admiration from mere external charms of person to the spiritual graces and gifts which lie deep in the character."

To these judicious considerations must be added certain observations which the opponents of coeducation do not seem to have taken into account; and, first, that the habit of being educated together is for young people of both sexes a better safeguard against love than continued separation. A young girl whose companions are almost exclusively of her own sex becomes romantic and is easily enamored, but one who has been always associated with young men, having experience and maturity, does not yield to extravagant enthusiasm. Moreover, in the love that may spring up in the mixed school there is nothing to alarm the severest moralist, and this because the oversight, as Dr. Harris has shown, is much greater there than anywhere else; and because the young American girl has a profound sense of her dignity, the young man a great respect for the woman, and both together the habit of self-control, there will result only a marriage, in which the tenderness is the more enduring because the husband and wife have so long known each other. It would be well if such marriages should happen often.

But will not the preoccupations of such attachments hurt the studies? This is a chimerical fear. As the relations are above all intellectual, a rising love, far from fostering idleness, will inspire more earnest work in order to secure the appreciation of the loved one—daily witness of failure and successes.

To these theoretic arguments in favor of coeducation there is added a final consideration more important than the others: It has triumphed in all the cities of the Middle States and the Far West, and even in the East it has a tendency to extend in spite of opposition. Some Americans speak of a reaction; but this triumph in the Western States, numerous and extensive and called to an important part in the future of America, does not justify this prediction. It is not for me certainly to judge of this. It would also be presumption for me to pretend to settle the question of the inferiority or the superiority of the mixed schools after having seen the greatest educators of the United States divided as to the subject. Therefore I will offer only in conclusion my impressions.

It did not seem to me that in the mixed schools the hygiene, the work, and the order suffered from the presence of the pupils of another sex, and the appearance of the classes seemed to me even better than in the separate schools. But what disturbs the pedagogical sense is the great excess of the female sex in the high schools, both among the scholars and among the teachers. The majority of American youth—entering there at the age of 15 or 16 years—two-thirds, even three-fourths, of the pupils in the higher classes, are girls. This disproportion is bad for the young men. If it is good for their manners not to be separated from the women, it is dangerous to their manliness to be always in contact with young girls. Moreover, if the guidance of a female teacher is best for them when they are very young, at about 14 or 15 years, and perhaps younger, they ought to have different control.

It is impossible, at least without seeing it, to realize how painful is the spectacle of a young woman, who has not yet in her tone and attitude the authority which

age and long experience give, directing young men from 16 to 18 years of age. Certainly, neither the discipline nor the respect suffer from that, so profound is the deference of the American scholar for his lady teachers, but it is nevertheless true that in this ideal of instruction something is wanting. The female teacher can not secure from the young men all the intellectual work of which they are capable, she can not come into intimate relation with their adolescent mind, nor can she give them a manly development. Thus one whole part of education, the most fruitful and the best is eliminated, and the occasion is lost forever. It is right to acknowledge that these faults are not inherent to the system of coeducation. They arise from the particular conditions of American life, and in other countries it would doubtless be easy to avoid them. But would coeducation be acclimatized anywhere else? And in France, where it exists already in some departments of instructions, should it be extended to all? This is a question which I shall not consider here.[1]

M. Jules Steeg, director of the Musée Pédagogique, who had charge of the installation of the educational exhibit of France at the Chicago Exposition, and Dr. Gabriel Compayré, delegate from the minister of public instruction to the educational congresses, have simply noted the fact of coeducation in articles upon America published since their return to France.

The former says:

The girls are educated in America together with the boys. They sit on the same benches, pursue the same lessons and the same exercises without any distinction whatever, for the boys even take part in the sewing exercises and are very proud to exhibit their needlework every year beside that of their female companions. They would be astonished, I was told, if any one seemed to be surprised at this. I refer here to the first school years. Later some separation takes place in spite of all the theories in the world, and I have seen embroideries made by the girls and works in wood and iron by the boys. (Chicago et l'Exposition. Notes d'un visiteur Français. Rev. Pédagogique, June, 1893, p. 487.)

Dr. Compayré, in an article upon the educational congresses, says:

We cast our eyes over the audience—women predominate. The coeducation of the sexes commenced in the schools is continued in the congresses. (Rev. Pédagogique, November, 1893, p. 387.)

[Extracts from a report by Anna Bentzen, of Norway, who visited the United States for the purpose of studying the system of coeducation.]

The first school I visited was the Toledo high school. Here, as usually in the West, all public schools are mixed, and even the private schools do not class the boys and girls separately.

* * * * * * *

I noticed that the high school in Toledo (average age of pupils from 15 to 18) and in many other places presented an overwhelming majority of girls. In many classes I saw from 5 to 6 boys among 40 girls. The question forced itself upon my mind if this condition was due to coeducation. I addressed inquiries to principals and teachers as to the cause of this phenomenon, and I received the answer that practical life has much greater attractions for a lively boy than the school. * * *

Mixed schools are undoubtedly not the only form of schools in the United States, but when one observes the tendency thereto in all places where coeducation formerly found no sympathy, in most of the Southern States (whose history deviates in general from that of the Northern States), one can see how the system has prevailed there also theoretically; practice follows later wherever it is possible. That separate, as well as mixed schools, are found in cities of the Eastern States, *e. g.*, in Boston, shows simply the possibilities of a large city as to satisfying various views and wants. * * * It is plain that the cause obtains footing more and more, instead of losing it. All school authorities, superintendents and directors, who were so obliging as to enter more thoroughly into the question with me pronounced themselves unconditionally in favor of the policy, and presidents of colleges and universities expressed themselves in the same terms wherever coeducation had been introduced. In vain they look for intellectual inferiority of women, even in the highest educational institutions.

[1] In the continuation of the report, which is not yet published, the author considers the conditions under which coeducation is possible, and comes to the conclusion that it is impracticable for France.

It is true that fewer women than men go to universities after having finished the high-school studies. However, the percentage is constantly increasing, and, in comparison to the number of men, an equal number of women take their degrees with the highest credit. In the fall of 1890 there were 198 female students at the Wisconsin State University in Madison, and about four times as many men. At Ann Arbor, Mich., there was about the same proportion upon a total of 2,153 students. Coeducation in Wisconsin dates only from 1863, after the university had been in existence for many years (from 1838), and in the beginning it was not coeducational in the exact sense of the word, since the young women were instructed in a so-called normal department. At last, in 1873, all peculiarities in the instruction of women were done away with, and the university was opened to both sexes without any restrictions. The president of Ann Arbor University told me that the first woman student entered the university in 1871, and passed the fiery trial of public criticism and the university examinations with the greatest honors. Her example was soon followed by others, and for the last ten years coeducation at this university, as well as at many others, has been an established feature, and no more comments are made upon the subject, at least none that are unfavorable. Even the professors, who were most opposed to the new arrangement, confess that experience has conquered their opposition.

In some universities they are from principle opposed to coeducation. Harvard College, near Boston, has established a so-called annex for women students, but refuses stubbornly to give lectures before a mixed audience; for what reasons, the author has not been able to find out. This annex arrangement does not give satisfaction; it savors too much of "second hand," even although the privileges are the same as those bestowed upon Harvard proper. The women students up to this time have shown most interest in the branch of philology, but natural sciences gain more and more attention and original scientific investigations by single individuals have already been undertaken. The law schools are not attended by many women students, but in those of medicine there have been numerous women students for quite a number of years, and now and then some follow even the course of engineering. But the professions whose courses are followed by women in isolated instances only are of little consequence in the question of coeducation. When it is fully established in future the woman's inclination will prove to be equally as good and safe a guiding star as that of man, and there is no reasonable foundation for the apprehension that she will follow studies not befitting her sex. * * *

In some places I noticed a strict separation of sexes both in respect to their seating in schoolrooms and their marching in or out, and in most places there are separate playgrounds for boys and girls. One can easily recognize the necessity of the latter upon seeing that the pupils are but little supervised during the recesses. Separate cloakrooms are found everywhere. But as far as I could find out these trifling arrangements were the only ones thought necessary for the sake of order and morals.

One should remember the rough material which American schools receive. Recent immigrants, no matter if from the east or west, and without knowing a word of English, are received in the common schools or high schools. In the meantime there is something in the surrounding air that softens the uncouth nature of the child, and at the same time as he becomes familiar with the language of his new fatherland he imbibes the respect for his own worth as a human being and for the rights of his comrades, which is the profoundest principle in an American community. If those from the lowest classes of the community were kept aloof and the two sexes kept separate, would the teacher in such a case be able to bring about such changes? * * *

It must not be imagined that all schools possess a class of clean, well-situated, well-educated children, who might be sent to an exhibition; but although there are schools which use up all the energy of a teacher within a short period of time, destroying her good humor and tempting her to use a cane, we find that such is most often the case in those schools where no coeducation is advocated, and where now, as in some schools in Boston, they are afraid of introducing coeducation because wildness and roughness seem to be their inheritance and possession.

* * * * * * *

In America, young boys and girls associate in a friendly way together from their earliest childhood. They have all opportunities to become acquainted in school. * * *.

I had special opportunities in the Western States to observe these natural relations both in university cities among the students and other young people who were following practical careers. The young girls were strikingly easy and natural in their manners. From a moral standpoint, I discovered only healthy results from the American coeducation. It still remains to examine its effect in a physical aspect.

* * * * * * *

I have been much impressed in American schools (both in lower and common schools) by the weakly, pale-looking children with bad carriage of the body and much nearsightedness, judging by the distance of the books from the eyes. But I did not receive the impression that the girls looked more delicate, nor do statistics report to this effect.

* * * * * * *

Both boys and girls suffer from overcrowded classes (being pinned down to the desk for long hours), from bad ventilation and severe drafts, the want of playgrounds, and one-sided mental work.

* * * * * * *

Finally, I will add a remark on the economical feature of coeducation:

When I consider the equipment of the American high schools, as I saw them in most cities, and then imagine these expensive buildings doubled in order to accommodate each sex separately, there arises a strong doubt in my mind. Would it be possible to furnish these schools with expensive laboratories (not with 1, but with 3), with excellent microscopes, well-supplied libraries? Hardly in smaller cities where there is at present only one high school; however well the boys' high school might be equipped, the girls' high school would no doubt leave much for improvement.

COEDUCATION OF THE SEXES.

DR. W. T. HARRIS.

[Report of Public Schools, St. Louis, Mo., 1872-'73, pp. 105-120.]

Previous to 1858, in our grammar schools, the sexes had been entirely separated. Only in the primary schools and in the high schools, then recently established, had the experiment of coeducation been made. In that year the Franklin Grammar School was opened as a "mixed" school, and after it, one by one, the other grammar schools were reorganized until all except the Eliot School were "mixed" schools, receiving into the same rooms and classes both sexes. Having had an unusually good opportunity to watch the results, and having been educated myself partly in "mixed" schools and partly in schools open only to the male sex—the former being sundry district schools in country towns, village "academies," and city grammar schools, the latter being three classical schools or academies and a college—I felt considerable confidence in the views then presented. My observations had led me to indorse the statement of Richter:[1] "To insure modesty I would advise the education of the sexes together; for two boys will preserve twelve girls, or two girls twelve boys, innocent, amidst winks, jokes, and improprieties merely by that instinctive sense which is the forerunner of natural modesty. But I will guarantee nothing in a school where girls are alone together, and still less when boys are." I had noticed that the atmosphere of "mixed" schools was desexualized, where that of separate schools seemed to have a tendency to develop sexual tension. Again, whatever tendency toward indecency might manifest itself was far more easily checked in "mixed" schools by reason of the cross fire of watchfulness which made intrigue far more difficult to keep secret. The brothers and sisters and other relatives and intimate acquaintances of the pupil attended the same school, and every act was scanned from two points of view—the boys being participant in boys' gossip, and the girls being participant in girls' gossip, and the barriers being removed within the precincts of the family, parents could not fail to have a more faithful account of the behavior of their children than when isolated in different schools. Brothers and sisters mutually protect each other from shame. Besides this, the fact that the chief association between the sexes in "mixed" schools takes place under the eye of the teacher and in recitation, wherein the contest is purely intellectual, and where the manifestation of mere femininity—softness and sentimentalism—would cause the pupil to lose rank as a scholar, and where mere masculinity—roughness and willfulness—would make an unattractive spectacle, leads one to expect that the tendency of coeducation is to elevate the standard of admiration from mere external charms of person to the spiritual graces and gifts which lie deep in the character.[2]

---

[1] Recently cited from Richter's "Levana" by Dr. Clarke in his Sex in Education.

[2] The following statements were made in the report alluded to (1870), and I have had no occasion to modify the views therein expressed:

"That which theory establishes and experience verifies may be safely followed. The coeducation of the sexes within the limits of certain ages and within certain sections of the United States may be considered approved by the twofold demonstration of theory and practice. Whether these limits of age and place may be transcended with advantage is a question for practical experiment to solve. Theory is in favor of the extension of coeducation far beyond present practice, and, as a fact, the latter is creeping along conservatively up to the standard of the former. The admission of females into

But the question of healthy moral tone is not the only one involved. Granting the most favorable view of this phase of the subject, we have not yet settled the question whether it is desirable for women to have the same course of study that men have, nor have we touched that other much debated question arising from physiological differences.

The question of education has always pointed back to that of vocation and destiny, for education is a process of preparation for an end. Thus it involves the theory of the life sphere of the pupil. Again, besides "vocation and destiny," there is an "absolute state of man," as Pestalozzians tell us, for which every human being has a right to educate himself and be educated. The culture of the rational soul, the intellect, the will, and the affections, is the privilege of every human being, whether male or female. More than this, it is a duty; and the materialism, at present so fashionable, that finds its delights in chilling the fervor of an aspiration by suggesting physiological limitation as that which should determine the question of the culture of the rational soul and of participation in the spiritual heritage of the

---

colleges and scientific institutions, heretofore open exclusively to males, is the straw on the moving current, and tells what is coming. It is in accordance with the spirit of our institutions to treat women as self-determining beings, and as less in want of those external artificial barriers that were built up in such profusion in past times. We give to youth of both sexes more privileges or opportunities for self-control than are given in the Old World society. Each generation takes a step in advance in this respect.

"Occasionally, as in San Francisco, there is a returning eddy which may be caused by the unbalanced condition of society found on frontiers. Old cities like New York and Boston may move very slowly in this direction, because of enormous expense required to change buildings and school yards so as to adapt them to the wants of 'mixed schools.' In fact, the small size of school yards in many cities renders this change next to impossible. Western cities take the lead in this matter and outstrip the East. Within fifteen years the schools of St. Louis have been entirely remodeled on this plan, and the results have proved so admirable that a few remarks may be ventured on the experience which they furnish. I wish to speak of the effects on the school system itself, and of the effects upon the individual pupils attending.

"I. Economy has been secured through the circumstance that the coeducation of the sexes makes it possible to have better classification and at the same time larger classes. Unless proper grading is interfered with and pupils of widely different attainments brought together in the same classes, the separation of the sexes requires twice as many teachers to teach the same number of pupils. This remark applies, of course, particularly to sparsely settled districts. The item of economy is very considerable, but is not to be compared with the other and greater advantages arising.

"While it is conceded by the opponents of coeducation that primary schools may be mixed to advantage, they with one accord oppose the system for schools of a higher grade. Now, what is singular in our experience is the fact that our high school was the first experiment on this plan for classes above the primary. Economy and better classification were the controlling reasons that initiated this experiment, and from the high school the system has crept down through all the intermediate grades. (In our high school the sexes are assigned to separate study rooms, and meet only for actual recitation in the same room.) What had been found practicable and satisfactory in the highest grades could not long be kept away from the lower ones.

"II. Discipline has improved continually with the adoption of mixed schools. Our change in St. Louis has been so gradual that we have been able to weigh with the utmost exactness every point of comparison between the two systems.

"The mixing of the male and female departments of a school has always been followed by improvement in discipline, not merely on the part of the boys, but on that of the girls as well. The rudeness and abandon which prevails among boys when separate at once give place to self-restraint in the presence of girls. The prurient sentimentality engendered by educating girls apart from boys—it is manifested by a frivolous and silly bearing when such girls are brought into the society of the opposite sex—this disappears almost entirely in mixed schools. In its place a quiet self-possession reigns. The consequence of this is a general prevalence of milder forms of discipline. Boys and girls originating, according to nature's plan, in the same family as brothers and sisters their culture should be together, so that the social instincts may be saved from abnormal, diseased action. The natural dependence of each individual upon all the rest in society should not be prevented by isolating one sex from another during the most formative stages of growth.

"III. Instruction is also greatly improved. Where the sexes are separate, methods of instruction are unbalanced, and gravitate continually toward extremes that may be called masculine and feminine. The masculine extreme is mechanical formalizing in its lowest shape, and the merely intellectual training on its highest side. The feminine extreme is the learning-by-rote system on the lower side and the superfluity of sentiment in the higher activities. Each needs the other as a counter-check, and it is only through their union that educational methods attain completeness and do not foster onesidedness in the pupil. We find here that mixed schools are noted for the prevalence of a certain healthy tone which schools on the separate system lack. More rapid progress is the consequence, and we find girls making wonderful advances even in mathematical studies, while boys seem to take hold of literature far better for the influence of the female portion of the class.

"IV. Intellectual development is, as already indicated, far more sound and healthy. It has been found that schools kept exclusively for girls or boys require much more surveillance on the part of the teachers. The girls, confined by themselves, develop the sexual tension much earlier, their imagination being the reigning faculty and not bridled by intercourse with society in its normal orm. So it is with boys on the other hand. Daily association in the class room prevents this tension and supplies its place by indifference. Each sex testing its strength with the other on an intellectual plane in the presence of the teacher—each one seeing the weakness and strength of the other—learns to esteem what is essential at its true value. Sudden likes and dislikes, capricious fancies and romantic ideals, give way for sober judgments not easily deceived by mere externals. This is the basis of that 'quiet self-possession' before alluded to, and it forms the most striking mark of difference between the girls or boys educated in mixed schools and those educated in schools exclusively for one sex.

"That the sexual tension be developed as late as possible, and that all early love affairs be avoided, is the desideratum, and experience has shown that association of the sexes on the plane of intellectual contest is the safest course to secure this end."

race, will have exactly the opposite effect from that intended. It will produce an asceticism proportioned to the amount of conviction occasioned by such physiological doctrines, and to the consequent intensity of the recoil. If our highest norm is "chiefly clinical," and the mind with its culture is subordinate to the organization of the body, as is believed by (shall I say) a great majority of physiologists and physicians at the present day, at the least there are very many things relating to human history and institutions which become at once insoluble contradictions, the nearest example of which is the evolution, in the brain organism, of the theory in question.

One does not need to be reminded that human history is a record of deeds done in the cause of spiritual ideals, and that these ideals are the bases of all our institutions of civilization. The deeds of history, moreover, that are considered worth recording are most strangely subversive of physiological and hygienic laws, most of them involving such waste of human life as to lead even the materialistic spectator to believe that life as such is of small moment compared with some phantom idea secreted by the cells of the brain. To such a view, human history is a record of uninterrupted fanaticism, and the fruits of preaching the physiological gospel to young men or young women in the nineteenth century will only produce fanaticism of a kind that is not needed. By these remarks one would not intend to deprecate the study of physiology and hygiene, nor deny the function of the brain and nerves as instruments of manifestation, nor the application of hygienic laws to education. One objects only to the "animus" with which the thing is done, and to the theory of life and mind which is implied as their major premise by certain prolific writers on the subject, and one insists upon the doctrine that mind is essential self-determination whose responsibility extends so far as commonly to make it liable for the proper hygienic determination of the physical conditions of its manifestation. The physiological motto should be—Know thyself, not as a product of organism, but as a producer of organism.

In our district schools the ages of pupils range from 6 to 15 years, averaging only 10 years. In the high school the ages range from 12 to 20 years, averaging about 16. The physiological question, therefore, scarcely affects the district schools. But the pupils of the high school are just at those ages which the physiological question touches most vitally. So far as it concerns the question of coeducation at those ages, it is simply this: Whether the necessities of class recitation, with its regular recurrence and steady progress from week to week, impose any conditions upon one sex that can not be borne by it without unreasonably taxing the physical organism. It is claimed in the affirmative that the regular work which young men perform without injury is unsuitable to young women. "Identical coeducation" is, therefore, to be forbidden. Persistence being the type of the man, and periodicity the type of the woman, it is argued that they can not be educated together, nor in the same manner. Stated in plain school language, classes imply regularity or persistence in work, and this is injurious to girls of the ages between 14 and 20 years. But this statement at once relieves the question of any special reference to coeducation of the sexes in the same school. When one can point out a plan for a girl's school wherein there is no necessity for regular recitation and regular work, and wherein the organization is such that three-fourths of the class do not suffer by the constant absence of one-fourth of the class, he will have discovered a new organization, which wise educators will hasten to adopt, even for boy's schools. For the average attendance of boys on recitations is less than 75 per cent., when the schools throughout the country are considered, although it is common for city schools to secure 90 per cent and over. This per cent of irregularity has forced educators to organize careful systems of grading and classification, by which there may be secured an amount of elasticity sufficient to save the regular pupil from the injurious effects of his neighbor's absence, and likewise to save the irregular pupil from the necessity of overwork to keep up with the former. As it is, after all has been done, the evil of irregularity is counted the most serious drawback that we have to contend with. But the statistics of the attendance of girls in the St. Louis high school, compared with that of their percentage in scholarship, does not allow us to conclude that the progress of the classes suffers on their account. No satisfactory comparison can be made between the work of girls and that of boys; the problem involves too many elements; not only quantity and quality of work, but a consideration of the aims and motives that stimulates its performance. It is safe to say that no practical difficulty is experienced in the high schools on account of the larger per cent of absence of the girls. There are, it is true, "clinical cases" that form the exceptions to this rule. Such cases, however, are no more difficult to manage in mixed schools than in separate schools. Of course it is out of the question to adopt a system of individual instruction for all girls between the ages of 14 to 20. It would practically shut out from a fair education nine-tenths of the entire sex, and the remaining tenth, lacking the discipline of class work, would not acquire a thorough education.

Leaving the consideration of the physiological phase of the subject, it remains to be considered whether the vocation of women necessitates a different course of study from the general one already marked out for the primary and secondary schools. The question of vocation again involves the physiological question and the duties arising from particular natural functions. Under all circumstances woman's sphere must include a closer relation to family life than the sphere of man does. The intermediate province of civil society including the various phases of productive industry through which the wants of food, clothing, and shelter are provided may or may not by its nature belong to woman. The third province, the state, is farthest removed from the sphere of nurture which is the peculiar function of the family. In order to discuss intelligently this question we must regard it in its historical evolution and study the attitude of the sexes toward the three great institutions above named, the family, civil society, the state, under the different stages of human progress.

The savage or barbarous stage of society—the age previous to that of productive industry, or the triumph of labor by means of division—is to be characterized as an age in which whatever is fixed and routine, whatever can be accomplished by patient endeavor confined to prescribed forms or conventionalities, falls to the lot of woman. Man is driven by the sudden and severe exigencies contingent to savage life to hold himself in reserve for violent and temporary efforts such as leave him unfit for routine work. War and hunting being the necessary pursuits of man, it is necessary to leave to the woman what little agriculture and manufactures there may be carried on.

The slow growth of peoples from the savage state is marked by the division of labor; first, slavery appears, and its advent partially relieves woman as a sex; the slaves of both sexes labor together at the same tasks, while the women of the free class begin to retire within the family. From this stage on there is a growth of the antithesis between the family and civil society. In the former (the family) is found more and more the sphere of woman; in the latter (that of civil society), that of man, until the culmination of the epoch of productive industry which closes the second stage of human development or of progress in society.

From the second step of development arises the third epoch, that of machinery, wherein more is produced with less industry. Man gets emancipated from physical labor, but is compelled by the conditions of his civilization to compensate for it by activity of thought. But the ideal activity of thought is the activity of man's essence, and hence in being compelled to energize scientifically and with organizing ideas he achieves indirectly the very highest aim of his being.

This distinction of the civilization connected with the age of machinery from that of productive industry, in its special sense, is very important; it brings with it the elevation of woman to more general activities, to a sphere above the tension of sex, and above the limitations incident to peculiarities of natural organization. Not merely the vanishing of the distinctions in spiritual life that are founded on sex, takes place in this epoch, but the disappearance of those that are founded on caste and occupation of race, of birth, or wealth, altogether throughout the human family.

In the savage state of man the vocations of the sexes separate widely into the extremes of drudge and warrior. The education of woman in this period consists in acquiring a knowledge of the few arts and dexterities in the possession of the tribe, arts representing the whole sphere that will subsequently separate into the antithesis of family life and civil society, while the education of savage man relates to war and the chase, a field of activity wherein may be found the germ of the future political organization and the directing power of civil society. Thus in this phase of life the division of sex is the basis of a conservative side of society (the sphere of woman), which provides for the finite wants, such as food and clothing, and nurtures the young, thus forming the internal economy. Over against this is a negative and a destructive side (the sphere of man), which is turned against external foes and shields society from the violence of man and beast. Thus the province of man in this state of society has its positive aspect in the fact that it marks out the channels and sets up the limits or prescribes the forms of routine work which, as before stated, falls mainly to the share of woman in savage life. Thus the savage man fills the roll of the lawgiver and defender; he deals with the general or universal interest, the state of society as a whole, while woman deals with the particular or finite interests, the sphere of wants and necessities.

Ascending above this into the stage of industrial civilization, we find in progress an intermingling of the two former spheres. On the one hand the man who occupied the position of director and defender, and who appeared in the role of the generic or universal, now descends to the extreme of particularity, and, through division of labor, takes on himself the limitation which is required by special branches of industry. He descends to the particular and specific so far that he limits his whole life activity to the creation or production of some part or portion of a product of industry that must be joined to a hundred other parts before it becomes an article

of any use whatever. His whole occupation, for instance, may be that of tying threads or of cutting off pins. Man thus limits himself, as individual, to the finite and particular, in order that he may, through combination with civil society, make up a concrete whole of surpassing grandeur. In this second stage of society woman withdraws more and more within the family and finds in it a whole—inasmuch as each family contains a sphere or circle of duties and occupations separable from the sphere of civil society as a whole. In the total or whole of civil society each laborer performs some one function, however minute, that contributes to form that whole; there is only one total—that of the whole industrial community; on the other hand, in the institution of the family, each family is a whole, a reflection of the general type. On this account woman represents a generic or universal interest—that of the totality of the family—in the second stage of historic development, while man represents a particular interest in his functions as member of civil society. Each woman in the family has the entire round of duties of that sphere to learn and perform, while the man has not to know all the trades and vocations of society, but only his infinitesimal fraction thereof.

From this distinction between the family and civil society flows a well-defined difference in education. While the boy is to be educated to concentrate all his energies in the pursuit of one specific end—educated to limit himself in order that he may manage with intensity of force, and high achievement of skill, some special department in the articulated whole of the grand process of society—the girl must be educated to be versatile, quick to turn from one thing to another, to be on the alert for emergencies and not so absorbed in a single aim as to be oblivious of any one of the manifold phases of her entire sphere—the sphere of the family. Thus it will appear that her culture in the second stage of the growth of society resembles, in general outline, that of man in the first stage. Since man, as savage, faced the uncertain, the indefinite, and was obliged to be constantly on the alert, he dissipated his force and utterly unfitted himself for dealing with the definite routine task and the prescribed duty, and hence these were assigned to woman.

No writer has penetrated deeper into this relation of occupation to sex than Goethe. He enunciates clearly the principle as he finds it in his time, and his deep-seeing mind catches a few glimpses of the coming epoch wherein the antithesis of the second stage of human society is to be canceled and solved.

"Men," he makes one of his characters say, "should wear a uniform from their childhood upwards. They have to accustom themselves to work together; to lose themselves among their equals; to obey in masses and to work on a large scale. Every kind of uniform, moreover, generates a military habit of thought and a smart, straightforward carriage. All boys are born soldiers, whatever you do with them. * * * But woman should go about in every sort or variety of dress, each following her own style and her own likings, that each may learn to tell what sits well upon her and becomes her, and for a more weighty reason as well—(N. B.) because it is appointed for them to stand alone all their lives and work alone. * * * Observe a young lady as a lover, as a bride, as a housewife, as a mother—she always stands isolated. She is always alone and will be alone; even the most empty-headed woman is in the same case. Each one of them excludes all others. It is her nature to be so—(N. B.) because of each of them is required everything which the entire sex have to do. With a man it is altogether different. He would make a second man if there were none. But a woman might live to an eternity without even so much as thinking of producing a duplicate of herself." In these words we see how completely Goethe comprehended the spirit of the civilization in which he lived—a civilization now just beginning to show signs of transition to a new one. Generalizing his statements, he might have said "when that upon which one labors is universal, i. e., a general element in the supply of a general want, association may come in and the individual may limit himself to a uniform particular activity, to a trade or special branch of a trade. But not so when the object of labor is a diversified one, a totality of contingent particulars; there each laborer must perform all; no division of labor can transpire within that sphere—the sphere of the family, for example." In the spirit of his time Goethe adds: "In how few words the whole business of education might be summed up, if people had ears to hear. Educate the boys to be servants and the girls to be mothers, and everything is as it should be." "To be servants"—that is to say, to subordinate and limit themselves to special, prescribed occupations; "to be mothers" would mean, to cultivate that provident foresight and wealth of resources constantly required in the family.

In another passage Goethe hints at the possibility of ascending above these limitations which arise from the tension of sex and which are thus presupposed by the organization of society in his and our own age. "There is no doubt," says he, "that in all civilized nations women in general are superior to men, for where the two sexes exert a corresponding influence over each other, man becomes effeminate, and that is a disadvantage; but when a woman acquires any masculine virtue, she is the gainer, for if she can improve her own peculiar qualities by the addition of masculine energy, she becomes almost a perfect being."

Out of the completest realization of the division of labor arises the conquest of nature by machinery. In this conquest man becomes truly free and independent, inasmuch as he does not any longer have to employ direct struggles to force nature to yield her products in a form suitable for his use; he now makes nature do this. Fastening a machine to nature, he harnesses the elements, and thus produces an activity whose product subserves his rational intelligence. Instead of enslaving himself in this particular, in order to become free in the aggregate of society, he now finds his whole activity to be a directive or supervising activity, and thus an activity of thought and ideas, as well as of mechanical exertion. This third epoch is continually arising from the second one, just as fast as the ultimatum of simplicity is reached in any occupation and the labor-saving machine comes in to relieve the hand.

Man thus is continually ascending into the realm of thought and directive power. In this region there is no longer any unmodified physical nature. Ideas are neither male nor female; they are universal. So, too, is directive power. Culture in universals is the necessary education for it.

While in the division of labor the feminine organization has special adaptations, and special unfitness for one sphere or another; on the contrary, in the world of directive activity, the special fitness or unfitness arising from sex is a vanishing element, and there approaches an ideal wherein a concrete identity of spheres and vocations is to be found. Not that this implies annihilation of nature and sex, but only a complete and thorough subordination of them, just as now it is quite as feminine as masculine to attend school and learn to read. Sex will always remain in its narrow sphere, its modifying tone or tinge will extend into several higher spheres; but in science, in religion, and art its effects will be scarcely traceable. And the ascent from direct manual labor to directive labor, through the introduction of machinery, is accompanied with such increase of productivity in labor as practically to lift all individuals into easy circumstances, having most of their time for higher pursuits.

To the mere animal, sex is the most important fact of his existence, and with good reason, for he lives only in the species, and does not possess individual immortality. A conscious being is, by the fact of consciousness, elevated above the sphere of sex, and becomes immortal as individual.

To sum up the views here advanced, there seem to be three epochs in education derived from the changing status of the sexes toward each other as determined by vocation:

1. There was the condition of women in the savage state when division of labor within civil society existed only in germ, and the functions of family nurture and of providing food and clothing and shelter—the sphere of productive industry and civil society—belonged to women. Man gave his whole attention to defense, the province of the State, and the police function. He also hunted in the forests for a supply of meat. Hunting was partly industry, partly defense from wild animals.

2. Out of the savage state rises the epoch wherein civil society becomes fully developed, the era of productive industry and division of labor. The nation takes the place of the tribe, and frees man from perpetual police service. He settles into productive industry, and as he occupies civil society, woman retires within the family. Persistency is the type of labor in civil society. Periodicity the type of labor in the family; repetition of the same thing, concentration upon one thing, the characteristic of labor in the industries; diversity and versatility the characteristic of the labor within the family; engaged this hour preparing the breakfast and washing the dishes; the next making the beds and sweeping the rooms; the next cleansing and mending the clothing; the next knitting or weaving; the next, and at intervals the whole day, attending to the myriad wants of childhood. The labor within the family is as diversified as in civil society, and could be improved in skill by division of labor; but it does not admit of division of labor to the same extent. The woman prepared for the life of the family would therefore seem to need an education which would give her versatility, while the boy should have an education which would fit him for infinite concentration upon one thing. The girl should be educated to stand alone and to work at the confusing variety of tasks in the family. But the boy should learn to work in combination with others, to subordinate himself as a member of an organization.

For the second stage of social development, therefore, persistence and periodicity would seem to characterize, respectively, the spheres of labor of men and women.

3. But this phase of civilization is not the highest and final one. Out of the extreme division of labor arises the possibility of machinery. When labor is divided so minutely that each branch of it consists in a simple movement of the hand, arm, or body, the human intellect contrives a cunning mechanism and harnesses some natural power to it, perhaps water power or steam power, and straightway he becomes a mere manual laborer—a supervisor. From a slave he becomes a master. The machine gets thrust in everywhere between the human hand and the raw material. More than this, the intellect contrives combinations, and complicated machines

grow out of simple ones. The human being becoming more and more powerful, again, physical force is less and less needed in the supervision of the machines. Versatility and agility come more and more into play. The female is needed again in the industries, and she comes back to tend the power-loom and to make Waltham or Elgin watches. In the third and highest period of industrial development, therefore, where physical strength is less and less in demand and alertness more and more in demand, woman's sphere comes to be common with that of man, and she needs an education in the sciences, arts, and accomplishments necessary to the man. Besides this the realm of productive industry and division of labor, aided by labor-saving machines, encroaches upon the domain of special labor confined within the limits of the family and conquers one after another its drudgery, and reduces it to a general branch of industry. The power-loom, the sewing and knitting machines, the washing machine, the baker, the tailor, the manufacturers of preserved and prepared food, etc., are rapidly emancipating the slavery inside the family. We can not ignore the effect of great social changes arising through the invention of labor-saving machinery, and the consequent aggregation of population into towns and cities where cooperation may be availed of. Out of social changes arises the necessity of modifications in our systems of education. The demand of women for equal advantages in education with men is not a mere temporary demand arising out of the sentimentalism incident to the epoch, but only an index of the social movement that underlies our civilization. The demands on the woman of the present day are such as to compel her to educate herself in science, art, and history. Her natural proclivity to versatility and alertness of mind fit her in a peculiar sense for the sphere of teacher of children. Their arbitrariness and caprice can be best watched and foiled by her. Their feeble strength demands intermittence and periodicity, and their training must, above all, be gentle. To enter into the spheres of productive industry opening for her; to assume the place of director in the management of the family economy now offered her in exchange for that of drudge; to fill her sphere of hostess and conversationalist in polite society; to fill the sphere of teacher in the school; to enter into the literary domain recently conquered by such writers of social novels as George Eliot and George Sand, or into the art domain of music and the drama, conquered long since; all these conspire to demand for woman discipline, insight, and information, studies such as are necessary to initiate man into the "conventionalities of intelligence." The demand for the same course of study is paramount, that for coeducation subordinate, although of considerable importance.

THE COEDUCATION OF THE SEXES.

By Dr. E. E. White.

The coeducation of the sexes has become one of the live questions, and the arguments pro and con are numerous and various. One of the arguments against education is based on the difference between the male and the female mind. It is affirmed that the minds of men and women differ, and it is inferred that this difference necessarily demands a difference of education. Is this inference a necessary consequence of the fact affirmed? Let us see. The physical organization of the two sexes is diverse. Does it follow that they require a diversity of food? Boys and girls sit at the same table, eat the same kinds of food, and breathe the same air, and their bodies are equally well nourished and strengthened. The mere fact of mental diversity no more necessitates a diversity of education than physical diversity necessitates a diversity of food and air. What must be shown is, that the mental difference of the two sexes is such as to necessitate a difference of education, and this necessity must be proved; it can not be inferred. It is not axiomatic. The fact that there is sex in the mind does not necessitate sex in courses of study and instruction.

Equally defective is the argument against coeducation based on the diversity of pursuit and mission. It is affirmed that the sphere of action of men and women as a class is diverse, and it is inferred that they consequently require a different preparation, and hence a different education. Are these inferences necessary consequences? Why may not diverse minds derive a diversity of preparation from the same course of education? Almost every family is an illustration of the fact that different persons receive different influences and advantages from the same surroundings and circumstances. The oak and the elm grow in the same soil. The same is true in education. The two sexes derive a diversity of preparation from a like course of study, each eliminating and appropriating according to its own law and its own life's needs and duties. This argument is eminently absurd when applied to elementary and general education. The fact that a boy is to do a man's work in life, and a girl a woman's work, hardly proves that they should not study arithmetic, geography, and geometry together. When applied to special or professional educa-

tion the argument may have weight. Moreover, the difference in man's and woman's sphere of action may require a difference of education, but this is precisely the fact to be established.

The argument against coeducation based on the difference in the physical strength and endurance of men and women is more logical. If it be a fact that women, as a class, have not the necessary physical stamina to endure a course of education as thorough and extensive as men, then it follows that women, as a class, must receive an education less thorough and extensive than men, as a class, are capable of receiving. But it does not follow that the education of women should be less thorough than that which men are receiving; nor does it follow that women who are physically capable of competing with men in the highest culture should be denied the privilege. But where is the average limit of woman's physical capacity in education? So far as our common schools, high schools, academies, and normal schools are concerned, this limit has not been ascertained. In these grades of study she does her work as easily as her brother, and equally well, though not precisely in like manner. If her inferior physical strength practically limits her educational progress such limitation must be found in the college or university course, and this fact can only be settled by experience. It does not fall within the scope of logic.

It will be noticed that we do not deny the facts which form the premises of this triple argument against the coeducation of the sexes. We admit that the intellectual, moral, and physical natures of men and women are not precisely identical, and this difference may be sufficiently marked to justify some diversity in their higher education. While we would give a daughter an education every whit as thorough and complete as a son, we are not sure that we would have their education in every respect precisely the same. The diversity would not, however, be sufficiently great to necessitate their attending separate schools. Whether all our colleges and professional schools should be opened to men and women alike, we are not prepared to decide. We would like to see enough of them so opened to afford the women of the country the highest educational advantages; and yet, could our word do it, we would, in addition to the Oberlins and Michigan universities for both sexes, endow Harvards and Yales for women.

We feel sure that such institutions would be attended by many more women than the mixed colleges. Experience indicates that but few women, comparatively, wish to take a regular college course. Oberlin, and a few other colleges, have for years welcomed women to their classes, but very few have availed themselves of the advantages offered. Meanwhile, Vassar and other higher seminaries for women have been well attended. There seems, at least, to be little danger that the opening of college doors to women would overcrowd college classes. A few girls, possessing as a class superior abilities, would be added to the class rolls. What will be true in the future, when woman's pursuits and mission are enlarged, we can not say.

We intended to notice the logic of several of the current arguments in favor of coeducation, but a want of space forbids. Suffice it to say that the *non sequiturs* are not all on one side. The logic that can jump from the fact that boys and girls are brought up together in the family to the conclusion that the sexes should be similarly associated in boarding schools will not pay puncturing. It is sufficient to say that there is not a higher institution in the country that adopts, or can adopt, the unrestricted freedom and social community of the family. This sort of talk is, however, a good deal better than the clap-trap which denounces colleges for men as "relics of barbarism." Such a performance requires neither brains nor sense. The truth is the universal coeducation of the sexes is, to some extent at least, a question of moral elevation and enlightenment. There are evident advantages in bringing together young men and women of high moral character and refinement in the same institution, and even under the same roof, but such an arrangement would hardly do in Peru or Mexico, since the essential condition would be wanting. We are not sure that it would work well in all the institutions of this country. The arrangement requires an all-controlling and vitalizing moral and Christian influence, and where this is wanting coeducation, involving coboarding, is a doubtful good; at least there are two sides to the question. We would give every woman the opportunity to acquire the highest and best education possible, and leave experience to settle the rest. (National Teacher, June, 1872, pp. 214–216.)

The organization of the high schools of Boston naturally meets with approval from the opponents of coeducation. On this side must be included the late Dr. Philbrick, whose superintendence of the Boston schools[1] forms one of the most important chapters in the history of educational administration in this country. Dr. Philbrick regarded the specialization of the high schools of his city as the end of an evolu-

[1] From 1857 to 1874, inclusive; also, 1876–1878.

tionary progression which had already been attained in the "most advanced educating countries." His position is shown by the following citations from a circular of information published by this office in 1885. The reader should keep in mind the statement by the present superintendent of the Boston schools as to the status of the high schools,[1] and also that of the superintendent of Salem schools,[2] to which Dr. Philbrick refers. In respect to the foreign precedent, it should be remembered also that provision for higher education of women has not yet been developed in the German States, which alone are mentioned by Dr. Philbrick, and consequently their example has really little bearing upon the question before us.

[Circular of Information of the U. S. Bureau of Education, No. 1, 1885.]

CITY SCHOOL SYSTEMS IN THE UNITED STATES.

By JOHN D. PHILBRICK, LL. D.

We have seen that in Boston the foundation of the high-school system was begun by a specialization of institutions instead of a specialization of courses within an institution. In harmony with this method a separate classical high school for girls was opened in 1878, although this plan was opposed by the friends of coeducation, who urged as a substitute the admission of girls to the Latin school for boys. In the meantime the first high school for girls, above mentioned, having been set up in advance of public sentiment, had a short life, being abolished under the lead of a very eminent and public-spirited citizen, who represented the aristocratic sentiment, which is always anxious to keep the education of the people within pretty narrow limits. A quarter of a century later the establishment of a city female normal school was immediately followed by the demand of the people for a girl's high school. This demand was met by the makeshift method of reorganizing the normal into a girl's high and normal school, the result being a good high school and a poor normal school. In time the specializing process took the poor, pinched normal department out of this double organization and organized it into a separate school, which soon became vigorous and efficient. We find here also another interesting illustration of the process of specialization in the development of the high-school system by the annexation of adjacent municipalities. The Boston system was by this means increased by the addition of 5 high schools, mixed both as to sexes and courses; and, besides, the old, endowed Roxbury Latin Grammar School above alluded to, was opened to the inhabitants of the whole city as a free classical school for boys.

The annexed mixed schools were allowed to remain mixed as to sex but their courses were unified in conformity with that of the English high school, the elements of Latin, however, still being permitted in addition for the local convenience of beginners in the classical course, who must later go to the central Latin schools in order to complete the preparation for college. At the same time an advanced course of two years was added to the original course of three years in the central boys' English high school and in the corresponding school for girls, to which the graduates of the local high schools were admitted, and, finally, a new high school of the local type has been recently established to accommodate the inhabitants of an outlying district of the city.

The system as it now stands then, exclusive of the free corporate school above referred to, consists of 6 local mixed schools of the lower order and the 4 central schools of the superior order, a classical and a nonclassical one for each sex.

This central group of 4 high schools may be regarded as the normal type of high-school organization. It is in harmony with the organization of secondary education in the most advanced educating countries, which educates the sexes in separate schools and provides separate classical and nonclassical schools for boys, of which the representative types are the German gymnasium and the Realschule. Considerations of economy will prevent this specialization in the small cities. In the largest cities, as we have seen, the progress towards this specialization is already considerable, and the history of education justifies the prediction that it will continue to advance in proportion as the inhabitants comprehend what is best in education and demand it for their children.

The ancient and cultured city of Salem is the only city where a fair trial of the specialized and doubly mixed systems has been made. The former was tried first

[1] See pp. 787, 788. [2] See p. 789.

for many years; it was exchanged for the latter, twenty-five years ago, to save expense. The result has not been satisfactory, and a movement is now on foot for restoring the specialized system, which is said to meet with no serious opposition, except from the economical point of view.

But the specialization of the high-school system in our large cities is not to stop here. We see already that Baltimore has incorporated into her system an institution for higher education, patterned after the corporate manual training high school at St. Louis. It seems quite probable that high schools of this kind, with such modifications as experience may suggest, will be established in all the principal cities. Such a school will, no doubt, meet the wants of a certain class of pupils, but if adopted it should be in addition to the standard types of classical and nonclassical high schools, and not as a substitute for either of them. And the reasons for establishing a supplementary high school of this kind for boys hold equally good for establishing a corresponding school with appropriate hand work for girls. (Pp. 24–25.)

* * * * * * *

Free secondary education having now become a fixed fact, attention in the future will naturally be given in larger proportion to the work of perfecting its organization and management, so as to adapt it more completely to the wants of all classes of citizens and render it an instrument of the greatest possible good, accompanied by the least possible evil. In my view, the evil connected with the high school which most loudly calls for a remedy is the harm which it is doing to the health of the girls who attend it. This evil is not of recent origin. It dates back to the time when girls were first admitted to high schools; it is not limited to any particular description of high schools; it is found in both small ones and large ones, in separate schools and mixed schools. Nor is it restricted to any one region or section of the country; wherever there is a high school, there the evil is found, and there the application of the remedy should begin. Of course, the harm inflicted has its degrees. There may be schools under very judicious management of parents' committees, superintendents, principals, and teachers where the injury to the health of girls has been reduced to a minimum. I am not aware, however, that such a school has come under my observation. On the other hand, there is a large number of schools, among which are some of the most noted in the country, where the injury inflicted upon the health of the female pupils is a very serious evil. What I mean is precisely this: That the evil of which I am speaking is general in our high schools and that the reform in this respect should be general; not that the evil reaches every individual pupil, but that it affects injuriously some pupils even in the best schools, and a large percentage of the pupils in that large class of schools where, as yet, hygiene is only a word and not a reality. In justice to the public high schools, it should be said, however, that the evil is not confined to them. It is quite serious, if not more so, in the whole body of thoroughly organized institutions for the higher female education.

The causes of this evil are manifold. The following are some of them: Injudicious application of the marking system; injudicious system of examinations; too many studies; too many home lessons; an injudicious method of teaching, which confounds thoroughness with exhaustiveness; too much pressure to secure punctuality and regularity of attendance; rolls of honor printed in annual reports; competition for honors and medals; too long abstinence from substantial food and nourishing drinks; bad air; cold drafts; too many flights of stairs. These manifold causes suggest the manifold remedies. The remedies can be more easily and effectually applied in separate schools than in mixed. To remedy the evil in question effectually in mixed schools without too great laxity towards the boys is no easy task. Higher female education has come to remain. It is a new element in modern civilization. It is a great boon. It has been attended with a lamentable evil which has largely offset its blessings. Let the remedying of that evil be one of the chief tasks of all earnest promoters of higher female education.

BOSTON SCHOOL DOCUMENT NO. 19—1890.

MAJORITY AND MINORITY REPORTS OF THE SPECIAL COMMITTEE ON THE SUBJECT OF COEDUCATION OF THE SEXES.

MAJORITY REPORT.

IN SCHOOL COMMITTEE, *September 9, 1890.*

At the regular meeting of the board, March 25 of the present year, on motion of Mr. Winship, it was ordered "that a special committee of three be appointed to consider and report upon the subject of coeducation of the sexes, with special reference to future school buildings."

Schools.	Number of teachers in favor of or opposed to coeducation.				Sex of pupils attending.	Number of classes composed of—			Average age of pupils in the—			
		Teachers.							First class.		Second class.	
	Masters.	In favor.	Opposed.	Masters and teachers undecided.		Boys.	Girls.	Boys and girls.	Boys.	Girls.	Boys.	Girls.
GRAMMAR SCHOOLS—continued.

Tileston	.....	2	....	1	Boys and girls	....	....	3	14·7	15·2	13·11	14·2
Warren	Yes.	13	....	....	....do	....	....	13	15·6	15·7	14·11	15
Wells	Yes.	8	2	....	Girls	....	10	....	.....	15·4	.....	14·3
Winthrop	No.	....	16	....	....do	....	16	....	.....	15·4	.....	14·8
Total	.....	421	254	62	.....	208	18	242	.....	.....	.....	.....

The foregoing table shows:

Masters in favor of coeducation	44
Masters opposed to coeducation	14
Masters undecided or favorable in part	7
	65
Teachers in favor of coeducation	422
Teachers opposed to coeducation	254
Teachers undecided	51
	727

It will be observed by the above that the masters who are opposed to coeducation, with but one exception, have charge of either boys or girls alone, while the exceptional master, having boys and girls, has unmixed classes.

SUMMARY.

	In favor.	Opposed.
Supervisors	3	.....
Masters	44	14
Teachers	422	254
Presidents of colleges and professors	12	8
Superintendents	18	1
Reverends	37	9
Physicians	29	10
Total	565	291

Of the 254 teachers opposed to coeducation, 122 are teachers of girls alone and 109 instructors of boys only. They may be considered *ex parte* in their views, and should be ruled out.

It appears that certain opponents of coeducation have, by an acquired interest in teaching boys or girls alone, warped their minds into the belief that the sexes should be separated, while others, through a lack of knowledge which experience gains, conclude theoretically that coeducation is wrong.

To teach boys alone requires far more concentrated energy, will power, and nerve force or tension, than to teach girls, or boys and girls. The only advantage in having the sexes separated may be to give inferior teachers easy positions in girls' schools. This is not intended to indicate inferior teachers in our schools devoted alone to girls, for the masters of such schools are as anxious as any to gain the best teachers the State affords, but it is a fact that certain masters of mixed schools have separated boys from girls in order to aid inferior teachers.

A very large majority of the opinions gained coincide with the views entertained by a majority of your committee. The committee recommend the passage of the following orders:

1. *Ordered*, That the normal school be so arranged that young men may enter and join the young women in the same course of study.
2. *Ordered*, That the boys in the Latin and English high schools, and the girls in the girls' Latin and high schools, be united in mixed classes as soon as practicable.
3. *Ordered*, That the grammar schools in districts where the boys are taught in different buildings from the girls be arranged for mixed classes as speedily as the necessary changes in the buildings will warrant.
4. *Ordered*, That in the grammar-school buildings where boys and girls attend, but where the boys are taught in separate rooms from the girls, the change be made by having mixed classes.
5. *Ordered*, That all newly erected buildings, and buildings to be erected, be arranged for the coeducation of the sexes.

J. P. C. WINSHIP.
EMILY A. FIFIELD.

—

MINORITY REPORT.

The undersigned, a minority of the special committee on coeducation, unable to agree with the conclusions or to support the recommendations of the majority of the committee, respectfully submits the following report:

It is not deemed necessary by the minority to traverse the whole subject of coeducation of the sexes. The subject has been so fully and frequently discussed in recent years that the opinion of those interested is undoubtedly already formed. Indeed, as to the wisdom or unwisdom of educating together boys and girls, or young women and young men, it does not seem probable to the writer that there will ever be any substantial agreement. It is one of those questions about which there will always be wide differences of opinion, according to personal experiences and the conditions of population in different localities.

It is easy to see that in small and homogeneous communities the conditions are entirely different from those obtaining in large, cosmopolitan cities; and looking at the subject from the point of view of the parent, it is obvious that while in certain localities where the population is homogeneous a parent will unhesitatingly send his children to a mixed school, he would be unwilling to do so if he lived in a community where the conditions of population are quite different.

In small towns and villages economic reasons seem to make mixed schools necessary; but in cities the question of expense in maintaining separate schools for the sexes is not an issue, and in such places it would seem to the minority a manifest injustice to compel a parent to send his children to mixed schools, if he strongly objected to doing so. Unless, therefore, it can be shown that there is a principle at stake—that it is unjust and wrong to separate the sexes—expediency would certainly dictate that the wishes of a very large proportion of this community which does not believe in mixed schools should be respected.

For many years it has been the wise policy of this city to maintain separate schools for boys and girls after they have passed the primary-school age, except in the suburban districts, where for financial reasons the local mixed high schools and some of the mixed grammar schools have been retained; but as it is allowed that suburban high-school pupils may attend the large city schools where the sexes are separated, provided the parent so desires, it would seem that our present policy is an eminently fair one, and that it should not be changed, as recommended by the majority of the special committee, unless it can be shown that to separate the sexes is wrong, unjust, and unwise.

Does the report of the majority show this? The statistical evidence of the report seems to the minority of little worth, for the reason that while a very large proportion of those interested in changing an existing state of affairs is always active to accomplish their object, those who are not in favor of a change seldom take the trouble to defend the *status quo* until they are driven to do so.[1] The minority has made no attempt to collect statistics others than those presented; but he ventures to predict that if such changes as the majority recommend were found to be seriously thought of by this board, a flood of remonstrances would be forthcoming, not from other States and country towns, but from our own educators and from parents of this city, which would make the majority's statistics seem futile indeed.

Large numbers of letters have been received from teachers in favor of mixed schools chiefly on the grounds that it is easier to maintain discipline when boys and girls are together, and second, that the influence of the sexes is mutually salutary. In regard to the first supposed advantage, the minority would reply that a good teacher has no difficulty in maintaining discipline in separate schools, in witness of which statement attention is directed to the central high and Latin schools of this city, in which the sexes are separated. As to the beneficial influence of boys and girls on each other, there is a difference of opinion. That there are certain mutual benefits in the association of the young of opposite sexes, under judicious supervision and under proper conditions, no one can deny; but whether the judicious supervision and the proper conditions are generally obtainable in public schools is another question; furthermore, it remains to be shown whether the supposed advantages of association in schools are not by far overbalanced by certain evils of such association.

A favorite argument of those who favor mixed schools is, that as brothers and sisters are brought up together in the same family, boys and girls should not be separated when they go to school. It seems idle to take time to consider this argument; it is enough to point out that parents who delight in the brotherly and sisterly relations of their own children may naturally prefer to have some choice in their children's associates, and may be unwilling that their sons and daughters should mingle freely in the mixed public schools with children of opposite sex. There are those who take the position that, as marriage is the ultimate destiny of most boys and girls, they ought to be given an opportunity of meeting each other in early life in order to enable them to understand each other better, and thereby to make their choice more intelligently. To all this the writer would reply that the duty of the State is to educate her children in the public schools in the branches of common-school education, and not to provide for social intercourse between the sexes, however desirable that may be.

The proper place, in the opinion of the minority, for the young of both sexes to meet and to learn to know each other is in the home and in the smaller circles of social life, under the eyes of judicious parents and with their approbation. The responsibility of the maintenance of proper relations between the sexes, then, rests where it belongs—with the parents and not with the state. If it is argued that whether boys and girls attend the same school or not they are sure to meet and associate more or less out of school hours, the natural reply would be that wise parents control their children out of school and restrict their associations in accordance with their own judgment.

It is stated or implied in the majority report that a certain injustice is done to girls by not allowing them to attend school with boys. The writer fails to see the truth of this implication; so far as his knowledge of our schools goes the curriculum is the same in all our schools of similar grade, except that girls are taught sewing and cooking, while boys are given lessons in the use of tools. If the implied injustice consists in withholding from girls the stimulating influence of good boys, let us be thankful that they may thereby escape certain evil influences of bad boys.

That the writer may not be thought to overestimate the possibilities for evil in the mixed school, let him state briefly the result of his personal experience. He passed through all the grades of the public schools and was graduated from the high school in a flourishing suburban town, where the schools were second to none

[1] There were sent to physicians, who are largely opposed to coeducation, 165 circular letters of inquiry; out of this number replies were received from only forty-eight; so that the majority report can hardly be said to correctly represent the opinions of the medical profession.

in the State, and where the teachers were faithful and judicious. Even in the primary schools, but more especially in grammar and high schools, words and actions came to his notice that no good boy or girl could hear or see without blushing. There were, so far as he knew, no overt acts of positive immorality; but in addition to much foolish flirting and frivolity, there were not infrequent instances of outrageous offense against good manners and morals. It did not appear that any of these offenses could have been prevented by the teachers; but they could not have occurred in schools where the sexes are separated. Passing from this atmosphere it was the writer's happy fortune to enter one of our Boston schools, of which we all are proud, the Boston Latin school. In his three years' experience in that school there was a conspicuous absence of anything of a low or immoral nature, and the contrast with his former experiences was as refreshing as it was startling. Can it, then, be wondered at that when some thirteen years ago it was sought to admit girls to this school the writer united with other alumni and did all in his power to avert such a catastrophe? The minority would certainly not imply that the pupils of our prosperous girls' Latin school could possibly be guilty of any impropriety of conduct if sent to the boys' school; but he wishes to express in the strongest way his belief that schools are places in which to educate the young, that all possibilities of harm should be kept out of them, and that there should be in them no sexual distractions.

There are other objections to teaching the young of both sexes in the same schools besides those based on moral considerations; but the minority does not consider it necessary to dwell upon them. Much could be said of the unwisdom, considering the differing aptitudes and mental attributes of boys and girls, of teaching both sexes after the same methods, even if the studies pursued are identical. Much, too, could be said of the unhealthful rivalries between boys and girls, and of the baneful stimulus to delicate girls to overwork their minds at times when they should be allowed to rest. But enough has been said, it is believed, to show why the undersiged can not support the changes proposed by the majority, and to warrant him in recommending to this board that no action be taken in the direction of coeducation.

CHARLES M. GREEN.

The report embodied also numerous and copious abstracts from replies to the circulars of inquiry; selections from these are cited here and in subsequent pages, though not in the order or position that they occupied in the original document. In making the selections the purpose has been to supplement opinions recently expressed by statements representing different experiments or a wider range of interests. The citations immediately following are (1) from supervising officials, publishers and editors whose observation and experience have not been limited to Boston, and whose opinions have weight throughout the country. (2) Teachers whose opinions have been formed in the immediate conduct of the policies between which choice is to be made. The arguments which the teachers advance are not new, but they are accompanied by professional experiences of greater value than opinions, experiences that teachers seldom attempt to formulate, but which are no where else attainable. (3) Clergymen who are of all men most thoroughly acquainted with social influences and tendencies. (4) Well-known writers on social ethics.

CITATIONS FROM THE BOSTON SCHOOL DOCUMENT.

Opinions of superintendents, supervisors, and teachers.

SUPERVISORS.

I was submaster in the Adams school from 1856 to 1864. At that time, as now, both sexes were educated under the same roof, but not in the same classes. I requested the master (Mr. P. W. Bartlett) to allow me to try the experiment of teaching both in my room. Previous to that date (about 1858–'59) the boys and girls were mixed in the first class only. My request was granted, and the experiment was so successful that soon it was the common practice in other schools. Of late years I have watched the high schools in the outlying districts, where boys and girls study and recite in the same rooms, and I feel sure that the results are very satisfactory. I am heartily in favor of the coeducation in well-disciplined schools.

R. C. METCALF.

I believe in coeducation of boys and girls. The mutual influence is refining and strengthening to both. The natural emulation is a healthy stimulus and motive to study and thought. The moral effect is purifying and elevating, making the relations between them less artificial and giving each a true appreciation of the other, leading to juster comparisons of the sexes and more hearty respect and good will on both sides. Coeducation corrects some of the most troublesome incidents of school discipline and throws increased interest into school work; it also develops symmetrically and naturally the social feelings and cultivates courtesy and helpfulness in all the relations of life.

LOUISA PARSONS HOPKINS.

—

ANN ARBOR, MICH., *May 5, 1890.*

In our Western schools—grammar and high schools—we know nothing by experience of separate education of the sexes. Our pupils are all treated exactly alike, have the same course of study, the same teachers, recite in the same classes, have the same questions in examination, and participate in the same public exercises.

This is true up to and through the high school.

In the high school there is this degree of separation: The girls have their own "session rooms," presided over by women; and the boys, their own, presided over by men; but in all school work the sexes mingle.

In the junior and senior classes of the high school the pupils have class organizations, partly literary, partly social.

These class organizations make arrangements for occasional class social entertainments, which are held, by invitation, at the homes of class members. No evil seems to develop from any of these interminglings of the boys and girls, while their general influence upon each other seems to be salutary. Especially is the presence of genteel, cultured girls a great benefit to some of the boys, in restraining, softening, humanizing them.

We believe that boys and girls were intended to be brought up together in families, educated together in schools, and yoked together in the same fields of duty and usefulness in the world.

W. S. PERRY,
Superintendent.

—

PHILADELPHIA, *April 30, 1890.*

In the Philadelphia public schools the sexes are educated separately, not only in the high schools, but, with few exceptions, in every grade of the elementary schools. Public sentiment is, however, gradually changing on this question. My own conviction is that boys and girls can be taught to better advantage in every way together. Experience shows this to be the case, and coeducation is becoming universal throughout this country.

JAS. MACALISTER,
Superintendent.

—

CLEVELAND, OHIO, *May 2, 1890.*

Formerly the practice in this city was to separate the sexes in all the grades, from the time of entering the school until the pupil left school, except in instances where the smallness of the school rendered it too expensive to so conduct the schools. Pupils of both sexes were obliged to recite together in the same room in the high school, and in many cases were obliged to be placed in the same general session room, the city having but one high school building on each side of the river. No bad effects whatever resulted from this coeducation method, but rather the reverse. As rapidly as the old ideas could be overcome, the coeducation of the boys and girls in all the grades—high, grammar, and primary schools—was introduced. For the last fifteen years at least the coeducation plan has been uniformly followed.

I have no hesitation whatever in commending it to all who are interested in the question, either practically or theoretically. No bad results have followed. On the other hand, there is a better tone and higher moral standard among the pupils.

I shall be pleased to receive a copy of the report of your committee, when printed, if the same is for distribution.

L. W. DAY,
Superintendent.

SAN FRANCISCO, CAL., *May 5, 1890.*

A close observation on my part during a period of now nearly forty years, forcibly convinces me that the coeducation of the sexes is founded in wisdom, and is a very great advantage to both boys and girls.

We have both separate and mixed schools in this city, and my examination leads me to the inference that the latter present advantages not to be had in the former. We have not, either in our grammar or high schools, had occasion to find any cause of complaint upon the part of the pupils, the parents, or the school authorities. Indeed, in our mixed schools we find an improved discipline and a greater zeal in the work. Our boys, subjected to the influence of the gentler sex, become not only more attentive in the prosecution of their work, but very much more gentlemanly in "their walk and conversation;" and our girls less rude and more ladylike.

My own experience as a teacher in all grades of schools and with my own children convinces me that the advantages had in mixed schools are very great, the disadvantages few.

J. M. ANDERSON,
Superintendent.

—

CAMBRIDGE, MASS., *May 13, 1890.*

The inclosed report, written by William A. Stearns, who became president of Amherst College, gives an account of the beginning of the coeducation of boys and girls in the Cambridge high school. The arrangement then made of "placing the grammar-school scholars of both sexes in the grammar schools and the high-school scholars of both sexes in the high school" has continued to the present time, and during my connection with the schools of Cambridge, a period of thirty-six years, I have never heard the wisdom of that arrangement questioned.

FRANCIS COGSWELL,
Superintendent.

—

Abstract from the report of William A. Stearns, chairman of the school committee of Cambridge, dated March 3, 1846, alluded to above:

"In a wisely-governed school of this description, the manners of the boys are softened and their minds refined, while the girls are placed under that measure of restraint which conduces to self-respect, watchfulness, and dignity of character. Besides, both sexes become acquainted with the good qualities of each other's minds and hearts. The friendships which exist among them are more likely to be founded upon esteem, upon a perception of kindness, of honor, of scholarship, and such like virtues in each other, than when the idea of sex is too carefully kept in view. May not the manifestation of undue solicitude to keep them apart operate by a natural law of association through the imagination to strengthen the evil tendencies deplored? Are there any means more likely to degrade the minds and vulgarize the whole character of either sex than to educate them on principles which exclude all innocent friendships, all mutual regard for the excellencies of each other's characters, all pure affections and civilities, and lead them to the thought that there is nothing attractive in each other's society but just that which is founded on the lowest distinctions of their nature? It seems to us that it is not difficult for a wise and pure-minded instructor to inspire his pupils of both sexes with those high sentiments of propriety; the boys with that sense of honor, that regard for the character of a gentleman, and the obligations of duty; the girls with that delicacy and dignity so natural to the cultivated female spirit, and both with that just appreciation of what is due to their nature, to public sentiment, to the consequences of actions, and to the laws of God, which will not only preserve them from gross immorality, but make their intercourse in some schools like that of brothers and sisters in the same family, alike purifying and ennobling.

"The extreme solicitude of some to keep up this kind of separation reminds us of a circumstance which actually occurred in one of our country towns some twenty years ago. In a large center school, as occasional glances were sometimes thrown across the aisle, it was seriously proposed by a most excellent citizen that 'a squinting-board' should be erected between the boys' and girls' side of the house, to prevent any 'casting of sheep's eyes,' to the detriment of the morals of the school. What wise parent would be willing to send his children to a school, in which a squinting board should not only separate brothers and sisters, and shut out from the two sexes the cheerful light of each other's countenances, but perpetually remind them that there is something degrading, something vulgarizing, something to be ashamed of in associating together, and even in looking at each other.

"Besides if children can not be trusted together amid all the restraints and preserving influences of a well-governed school, if they can not be taught to live together like brothers and 'sisters with all purity,' in the name of common sense what is to become of them when thrown out into society?

"In the opinion of those who attended the late examination, the school has never been doing better, at least for several years past, than it is at the present time."

SPRINGFIELD, MASS., *April 28, 1890.*

I have always been in favor of such coeducation; and whilst I have had supervision of schools in which the sexes were kept separate, from the primary schools up through the high schools, I have not seen any good reason for changing my views on the subject.

I have observed in schools where the sexes are educated together, as is the case in this city, that they have a mutually beneficial influence upon each other. I have not found any evils of a serious character at all to result from such association in school.

I have further observed in places in which the sexes were separate, that such separation in school had the effect of leading to evils in other unavoidable associations on the street and on social occasions; evils which, but for this artificial separation in school, I believe would not have existed. I believe that what objections there have arisen in certain localities to coeducation are due to evils which are not due so much to the effect of coeducation, as they are due to the fact that there are weak teachers in the schools who have not the power to create either a stimulating, intellectual, or a wholesome moral atmosphere in the school. Wherever the separation of sexes appeared to be a necessity I have found weak teachers and poor schools in general. I believe that they are related as cause and effect.

THOMAS M. BALLIET,
Superintendent.

BOSTON, MASS., *August 19, 1890.*

The coeducation of the sexes in our public schools is no longer an experiment. It has passed beyond the domain of experiment into that of well-established results.

Its practical working, and its effect upon the manners, the mind, and the morals of pupils have been tested under so many conditions, that it is no longer difficult to find data from which to draw conclusions regarding its value.

It is true that different minds, using the same data, may differ honestly in regard to the effect of coeducation upon character; but as to its effects upon mind, manners, and morals, which are to be judged by their outward manifestations, we may expect that a fair degree of harmony will exist among observing and discriminating teachers.

My opportunity for gathering data upon this subject has been quite extensive, as, with the exception of the four years passed in college, my entire life has been in schools where both sexes have been brought together. These have been academies made up of young men and women of widely varying ages and conditions, high schools and union schools, embracing pupils of all degrees of advancement and every phase of social life and character. I have also been familiar with a large number of normal schools and universities of the Middle and Western States in which the sexes have been associated from their origin. With this opportunity to study the subject, I may not seem bold if I express a decided opinion upon the results of coeducation.

Few have failed to recognize the reciprocal relation of the sexes, a mutual desire to stand well in the esteem of each other. This often shows itself in an earnest rivalry, a quite determined though genial competition which stimulates to mental activity without provoking animosity, especially to that degree likely to exist among those of the same sex. The complementary character of the sexes is an important factor in their education when allowed to exert itself in their mutual association. It is the law of nature the world over, that the contiguity of opposites stimulates to activity. Opposite magnetisms attract, opposite minds arouse in each other dormant forces. Complementary parts brought together form the unit—the perfect whole. The family is the unit in society, because it has all the parts to make up the unit. The school is a unit only when it has both sexes. The family is best trained that has the training of both father and mother. The daughter gains her most symmetrical growth only in the presence of a brother, and the brother only in the gentler influences of the sister.

That school is best taught and disciplined which combines in its teaching force the intellect and character of both sexes. It would seem that teachers, who are students as well as teachers, of the minds under their charge, must have observed the operation of this law. Young women develop better intellectually in the presence of young men, and the contrary is equally true; and what is true of young men and women is true of the boy and girl down to an early age. Their minds may not be different, but there are subtle forces at work that are different. Nobody sees how the sunlight does its work upon the plant, but he does see that the plant grows, and that sunlight is necessary to its growth. Nobody sees how the mental forces of one person enter into and do their work upon the nature of another, but he sees that there is such a work wrought.

The practical results in Cornell University, Syracuse University, the University of Michigan, and most of the other universities and normal schools outside of New England, demonstrate the value of coeducation. They show that young women do better work in the mixed schools than in those devoted simply to female education. More of them reach a high degree of proficiency. The notable cases that have come from the university annexes indicate the value of contiguous study of the two sexes.

What has been said of its effect upon mind can be said with equal truth regarding morals.

The constant mingling of the sexes in recitation, the measuring of themselves one with another intellectually, begets a self-respect, a circumspection of conduct, that protects against undue intimacy, and is a safeguard to the young women as it is a barrier to young men. Respect of one party for the ability of the other compels respectful conduct on the part of both.

Manners are so much an outgrowth of moral feeling that where a high state of moral culture exists, other things being equal, we expect to find a corresponding high condition of refinement of manners. The favorable effect upon young men and boys will not be questioned. Their manners are improved, and there are fewer instances of the ancient barbarisms of college life. Female society throws around them its restraints, imposes its obligations, and compels a propriety and refinement of conduct not so prevalent in male schools. As a matter of course the government of such schools is easier, their morals higher, and the *esprit de corps* more elevating. The forces of society are combined and act together, and, as a consequence, more satisfactory results are obtained. And while character is subtle—a something that can not be handled or seen—it stands to reason that a fuller and more symmetrical development will be secured when all the forces of social life are in harmonious action, than when any single element is wanting, and that better men and better women will be the outcome of our educational work.

W. C. Ginn,
Late Superintendent of Schools, Hillsdale, Mich.

Editorial Rooms,
New England Publishing Company,
3 Somerset street, Boston, September 6, 1890.

I have twice written you in reply, but have repudiated both. The simple fact is that it is a line of school thought to which I have given little attention. My thought has been largely focused upon the other ways and means. I do not see any principle involved that experience sustains. I have always said that, theoretically, boys and girls in all grades at all ages should be at school together, but in experience I do not see that it makes any difference in the hands of a first-class teacher. The Dwight school and the Gaston are as good schools as I know in the country. I do not see how they could be much improved if they were "boys and girls'" schools.

I would never open a new school that was not mixed, but I see no call for a readjustment of the schools.

A. E. Winship.

TEACHERS.

NORMAL AND HIGH SCHOOLS.

Normal School, *Boston, May 5, 1890.*

I think all the teachers in the normal school agree with me in the opinion that it would improve the training school as such to introduce girls. It would give the normal pupils an opportunity to observe the modes of discipline adapted to both boys and girls in a grammar school. Whether the change is practicable at the present time I am not prepared to say.

I should be in favor of having boys and girls in all grammar schools if there were schools in which the more vicious boys were required to attend. It is a serious question how far it is our duty to assist the vicious by association with the good.

I am pretty well satisfied in my own mind that the discipline of a school is made easier by the presence of both sexes.

LARKIN DUNTON.

—

BOYS' LATIN SCHOOL, *Boston, June 6, 1890.*

On general principles and under ordinary circumstances I am not opposed to the coeducation of the sexes. I am opposed to it in the Latin school.

Several years ago a protracted and exhaustive hearing was given by the school board on this very question, so far as the Latin school is concerned. A happy solution of the question, as it has always seemed to me, was made by the school board in the establishment of a separate school for girls.

The boys' Latin school is large enough already. The schoolhouse is constructed for boys alone. Some of the work in the Latin school seems better adapted for boys than for girls. I have always had considerable sympathy with the objectors to the coeducation of the sexes in a classical course of instruction, though I do not consider their reasons as conclusive. Under the present peculiar and favorable condition of the two Latin schools in this city, I should consider it unfortunute to have them united.

Three teachers are in favor and eleven are opposed to the coeducation of the sexes. I understand that this expression of the teachers' opinion is, in most cases, if not all, confined to coeducation in the Latin school, and not to the question in its general application.

MOSES MERRILL.

—

GIRLS' HIGH AND LATIN SCHOOLS, *Boston, April 25, 1890.*

To my mind coeducation in secondary schools is largely a question of balancing advantages against disadvantages, and so is to be viewed with favor or disfavor according to the local conditions under which it is tried. In towns and small cities having a substantially homogeneous population, coeducation works well in the main; for there the conditions approach in simplicity the conditions of family or neighborhood life. In large cities, however, the case is different. There the population is not homogeneous, the families represented in the school are not known to one another, the numbers brought together in a single school are much larger, and the proportion of coarse natures among the pupils is apt to be somewhat greater. All this tends to make the question of morals and manners a more complicated one; and it is upon morals and manners—in other words, on the formation of character—thatthe question of mixed or separate classes, as it seems to me, chiefly turns.

Now, evils in the domain of morals, though perhaps they occur no oftener in mixed than in separate schools, are more serious when they do occur there. As such evils can be dealt with more directly, more quietly, and with a nicer adaptation of means to ends in separate than in mixed schools, I am inclined to think that for large cities like Boston the former are to be preferred.

I am confident that, in such subjects as physics and civil government, boys are more appreciative, more alert, and more responsive than girls, and the latter would unquestionably derive great benefit from association with the boys in the study of these subjects.

In schools established for boys exclusively, the teachers seem to feel under the necessity of resorting to artificial means of stimulating their pupils to industry; whereas, in schools established for girls exclusively, artificial pressure is not only not helpful, but is positively injurious. It is difficult for me to believe that the sex which needs spurring and the sex which needs curbing should be trained together.

Miss Shaw and Miss Foster, also three other teachers in our school, express their opinion that girls become intellectually more alert, and less passively receptive, when associated with boys in the same classes, than when taught by themselves. Neither Mr. Thurber nor Mr. Williston makes this observation, and I should not have thought of doing so myself as the result of my personal experience. As the result of my observation, however, I recognize the statement as true. This leads me to say that, other things being equal, I am inclined to think that girls are somewhat more responsive to the teaching of men than to the teaching of women.

JOHN TETLOW.

GIRLS' HIGH SCHOOL, *Boston, April 24, 1890.*

I have had long experience in schools for the separate sexes and also in mixed schools. My opinion is decided, that the advantages are, on the whole, on the side of the separation of the sexes in upper schools.

The tastes, the natural tendencies, the ways of receiving the subjects of instruction, the prospects of employment hereafter, all differ in the two sexes, and, whether he is aware of it or not, the teacher's methods take a coloring from his environment and adapt themselves to the circumstances of the case, with wholesome results, so far as this is possible. Many things in high-school teaching take their shape from the conditions as determined by sex. Only as teaching grows mechanical does it come to concern itself less with individual and sexual characteristics. It is a great gain in any school when it can be so organized as to make the classes homogeneous in all the respects that determine the ways and means of instruction. It is an economy not to have to consider the boys and the girls as needing somewhat different, but parallel, treatment in the same classes.

Girls grow more reserved when boys are present, as do boys when girls are present. Something of naturalness has to be sacrificed when the sexes are mixed in secondary schools. I am sure that many of the topics which girls choose to write their compositions about, they would never take if they thought their exercises were to be heard by young men. They are tolerably free to write on domestic employments, cooking, sewing, kindergartening, and other such topics—the topics that really interest them. Were boys in the classes, the girls would grow altogether conventional, and write without real personal interest, but only with the aim of avoiding the fate of becoming the objects of a smile.

S. THURBER.

CHARLESTOWN HIGH SCHOOL, *May 5, 1890.*

I am in favor of mixed classes.

My experience covers about twenty-one years in Boston schools, about equally divided between boys' classes and mixed classes.

This experience has convinced me that in mixed classes a better degree of scholarship can be maintained, and that the discipline is better, more wholesome, and higher in tone.

The life and spirit of a well-conducted mixed class is simply delightful to me, and there is the same satisfaction to me in the gentlemanly and lady like bearing of the pupils to each other, that I derive from the society of ladies and gentlemen in the world outside of school.

I believe in mixed classes, because I believe in mixed teachers.

I do not subscribe to the sentiment that teachers should all be men.

Some of the best teachers I have ever known are women, and aside from their ability to teach, they exercise a most excellent influence.

I am sure that boys and girls of the age of high-school pupils need the higher lessons of character, of noble sentiment, of unselfish service which women are quite as ready to give, in their lives, as men.

As I look back over my boy-life, I remember with gratitude the great influence of certain women as decided, as energizing, as directing, as that of any men who guided and assisted me; and I like to believe that in youth nature is much the same now that it was then.

J. O. NORRIS.

DORCHESTER HIGH SCHOOL, *May 5, 1890.*

I am a decided believer in a commingling of the sexes in high schools. As to grammar schools, I have had no experience to which I can appeal, and hence have no opinion worth quoting.

My observations are based upon a service of fifteen years in the English High School with boys alone, and some six years with mixed schools mostly in East Boston and here. At the end of my term of service in the English High, if I had any opinions, they were, as to boys at least, in favor of separation. During these latter years, however, it has become increasingly clear to me that the work done and the faithfulness shown by the girls is on the average much superior to those of the boys. Now, this is not only a stimulus to the latter, but it sets a standard which is constantly on hand, to be appealed to by way either of rebuke or inspiration, while it silently exerts a leavening influence. Of course I am repeating only the truisms of the subject when I say that the association of young men and women tends to tone down many of the roughnesses of boys, to produce a refinement in manners, and, unconsciously to them perhaps, exerts a restraint valuable in its effects. These

very effects have come under my direct observation as a teacher, while I recall the same influences as a boy myself in school.

Moreover, I am sure that it is easier to maintain a proper degree of discipline with a commingling of the sexes.

The influence of the girls is almost always on the side of good order. I recall instances where the boys have scarcely dared to commit acts which alone they would not have hesitated to do, because the girls emphatically frowned upon them. The excellent influence exists not only in the intercourse of the school session, but in those "off" periods such as recess and before and after school.

The benefit does not come wholly to the boys, however. In some lines the knowledge of the latter excels, particularly in practical matters such as mechanics and civil government, and frequently this tells in the class-room. That a certain manliness and a smaller begetting of prudishness results in the girls I am quite sure. Perhaps, recollecting the faithfulness of the girls and, possibly, their fewer distractions alone, they might go over more ground in text-books. Whether any better or healthier work would be done is fairly open to question. With girls alone I have no experience, and any opinion I may have is based on *a priori* consideration.

I have never as yet been so unfortunate as to undergo any of those sinister experiences which have not been unknown in mixed schools, and so the optimism of my opinions is not dampened.

The sentiments also of all the teachers in this school have been sought, and on the main question harmonize with mine.

CHAS. J. LINCOLN.

GRAMMAR SCHOOLS.

JOHN A. ANDREW SCHOOL, *May 5, 1890.*

This has been a mixed school from the beginning, but until within a few years the sexes have not been together in the same rooms except in the first class. From time to time the number of mixed classes has been increased, and the results have been such as to lead me to believe that coeducation is better, at least in the grammar schools. It follows the ordinary structure of the family and society, and is the way that three-fourths of all children are educated.

In rural communities, from necessity this has been the custom, and certainly in morals, manners, and intellect the country child is the equal of the city child. It is confirmed by the habits and customs of daily life; they are together at home and out of school, and should be taught together in school. To educate separately is to change the order of nature.

My experience tells me that it is best for the harmonious development of both sexes. In mixed classes each sex exercises a healthy restraint upon the other. Girls admire a manly boy and boys a womanly girl. And "What the child admires, the youth endeavors, and the man acquires." Mean actions, which with either sex alone might be applauded, would be frowned upon in a class of both sexes, and not repeated. Thus the influence of each sex upon the other is healthful. Good discipline comes from evolution, not repression. Self-control is the key to success in school as in life. Coeducation begets self-control.

To state briefly, coeducation is best because it is natural; it gives each sex the same opportunities; it cultivates the best in each; it develops self-control; it gives a more harmonious development.

J. M. DILL.

BOWDOIN SCHOOL, *April 28, 1890.*

I am decidedly in favor of mixed classes.

Because the family is a "mixed class."

Because each sex is a restraint upon the other, and in the right direction.

Because the moral tone is higher when the sexes are together.

Because knowledge will be gained in mutual daily work, which may be of great use in forming life unions.

Because boys are awakened, refined, and given better ideals by coming into contact with the opposite sex under the watch and care of high-minded teachers. Especially will this be true if these teachers are of both sexes. I have long felt that an exchange of teachers should take place between the girls' high and Latin schools, and the English high and public Latin schools.

Because girls need to come into contact, during the formative period of their minds, with good, strong male teachers, in order to have a more complete development. The influence of a superior woman or man, acting alone upon the minds of

youth, can give but a partial development of character. If both exert their influence during the same period, the most comprehensive and beneficial results will follow.

In short, I would say the boys and girls would have higher ideals, would be more refined, more easily moved by sentiments of honor and respect, and would gain a more intelligent understanding of each other, which might be of great use in after life.

As our teachers do not seem inclined to write out their opinions, I venture to add some opinions of my first class girls.

About two-fifths of them have been in mixed classes. All of these, with one exception, think mixed schools are the best. The girl who did not agree said she went to school in the country where teachers were changed every term nearly, and the boys had things their own way. The girls, as a whole, are in favor of mixed classes. Only four voted in favor of keeping the sexes apart. Without asking leading questions, these statements were made in favor of coeducation. The girls would try harder to get ahead of the boys. The boys and girls would be a restraint upon each other. Both would come cleaner, neater, and be more refined. One girl, who has not been excellent in deportment all the year, said she would behave better because her brother would report her at home, etc.

Of course you will take these opinions for what they are worth. They were given with as much dignity and soberness as could be expected from young persons. I consider them weighty, though not conclusive.

It seems to me that if children are to be separated, it should be done before and after school first. This would seem more reasonable, because while in school they are under the care of teachers who can restrain any improprieties. Besides, when engaged in school work their minds are withdrawn from sex distinctions.

This battle concerning coeducation has already been fought out in Charlestown. It was fought a long time ago, when there were three grammar schools, one only being mixed. It was settled by putting both sexes in the other two. During my long residence in that part of the city I have never heard from any parent the wish, even, expressed that a return might be made to the old plan.

These opinions are based on knowledge and experience gained outside of Boston in all grades of schools, from the ungraded country school to the well-graded city high school. Since I came to Boston I have taught two and a half years in a large boys' school, twelve and a half in a mixed school, and four years nearly in the Bowdoin, which I am sorry to say has no boys.

I have six children in the public schools of Boston, and I want them all to have the benefits of coeducation.

ALONZO MESERVE.

BUNKER HILL SCHOOL.

It is natural for children to grow up together, and up to a certain age, say about 13 years (or indeed so long as it is thought advisable to teach boys and girls precisely the same subjects), I think mixed classes preferable, especially in schools where there is no great difference in the moral standard of the pupils. But when the time comes in the age of children, as I think it should come, that subjects are taught with some reference to their future employment, I think separate classes are preferable, in order to accomplish more (better results) in the same time.

The committee has already recognized, in part, this difference in the needs of the sexes, by providing a course of sewing and cooking for the girls, and another one in carpentry, etc., for the boys. I would go somewhat further in this direction. I would make a difference in drawing, working in a less mechanical and more artistic course for girls than for the boys. So in physics and arithmetic. The practical needs of the housekeeper are unlike those of the mechanic and builder, and while general principles should be taught to each, the illustrations and applications should be largely adapted to future requirements.

SAMUEL J. BULLOCK.

GASTON SCHOOL, *April 22, 1890.*

I am not in favor of mixed classes.

I have taught in mixed schools, in schools for boys only, and for the last year in a school for girls.

After leaving a mixed school and taking charge of a boys' school, I soon became convinced that the boys were more studious, more interested in their work, and made greater progress than they did when in competition with girls.

I was so well satisfied of the correctness of my conclusions, that when I came to Boston as submaster of the Bigelow school, I very soon asked the privilege of having boys only, and graduating them, leaving the girls to be instructed by themselves.

My request was granted, and the boys immediately took equal rank with the girls, receiving—because they had earned them—as many medals at graduation as the girls; whereas never before had they taken more than half as many.

The Lawrence and Lincoln schools soon separated the sexes in the same manner, with the same good results.

The girls continued to do as well as before, thereby losing nothing scholastically, while the boys made great gain.

I have been a careful student of the subject, in regard to the effect on boys morally, and I have failed to discover that the separation was in any degree demoralizing, or that the boys were not as refined and gentlemanly as when taught in the same classes with girls.

These opinions are confirmed by a twenty years' mastership of a boys' school.

I have not been in a girls' school long enough to have as definite opinions of the effect of separation upon girls, but as far as I can see they do not suffer in any respect by the separation.

THOS. H. BARNES.

HYDE SCHOOL, *April 23, 1890.*

After fifteen years' experience as a teacher of mixed classes in high and grammar schools, and a longer experience in schools in which in the sexes were taught separately, I am of opinion that, on the whole, it is better in high and grammar schools, in large cities, that the boys and girls be educated in separate schools.

This has been the policy of the school board for many years.

Our so-called mixed grammar schools have been two schools, one of boys and one of girls, in the same building.

Rarely have boys and girls in large schools been taught together in the same room.

Boys, as a rule, have graduated younger than girls.

Girls give four hours a week to cooking and sewing in some classes. Many wise persons think more time should be given in school to fit girls for the peculiar duties of their station.

They should not be disciplined or taught as if they were boys.

They should not be subject to pressure such as is often good for boys.

Important hygienic instruction can be given to girls or boys alone; nay, should often be given.

The average mother fails, at the vital point, properly to instruct her daughter; therefore the teacher must not fail.

Some sins against the body are crimes against the coming generations.

If these sins are committed ignorantly, the results follow.

A mixed school of young people in their teens must be a nursery of ignorance as to some essential truths.

I think more and better intellectual work is done in schools where the sexes are taught separately, and with less friction.

S. C. STONE.

LINCOLN SCHOOL, *April 22, 1890.*

Having tried both mixed and separate schools, I am still in doubt as to which is better.

In the Lowell School I had boys and girls in the second class for two years, and then asked Mr. Jones to let me have only boys, which he did.

My reason for asking for the change was that it seemed to me that the boys were somewhat cowed down in the presence of the girls and would not talk out as freely as when alone. Some of the quiet girls seemed to be afraid, too. I found the change profitable. The boys when alone would discuss a subject, expressing their opinions more freely, where they had before confined themselves to facts simply. They seemed to grow more manly and independent. As a rule, I think boys in a boys' school are more manly in many ways than in mixed schools.

But mixed schools make discipline easier than boys' schools and harder than girls' schools. So that point balances itself. In a moral view, I do not believe it makes any difference, except in a few individual cases.

M. P. WHITE.

LOWELL SCHOOL, *April 22, 1890.*

For fifteen years I was principal of the Comins School, where the sexes were in separate rooms. In this school, seventeen years, we have had mixed classes. My experience leads me to pronounce in favor of mixed classes, for the following reasons:

1. The weak points in the character of the pupils of either sex are corrected by the presence of the other.
2. The character of the boy is refined; that of the girl strengthened.
3. The rudeness of the boy and the frivolity of the girl are restrained, and the manners in both are elevated.
4. There is no good reason why the good effects that flow from the mutual influence of mingling the sexes in the family circle should not be looked for when we imitate nature in the school.
5. There is no longer any doubt of their being able to go on together with the same work.
6. I feel sure that the suspicion which some have, that the character and manners of each may be injuriously affected, is not worthy of a moment's thought.
7. The members of a family going to the same school, having the same master, and being governed by the same discipline, tend to peace and good feeling by all concerned.

DANIEL W. JONES.

We subscribe to the above.

EDWARD P. SHERBURNE.
ELIZA C. FISHER.

WINTHROP SCHOOL, *April 21, 1890.*

I am not in favor of mixed classes. As society is constituted in our cities, there are necessarily many children in our schools who are ignorant of the amenities of life, and others who are wholly indifferent concerning them. It is better that such pupils should be associated in classes with others of their own sex, in order that the improprieties of conduct may not demoralize the opposite.

The citizens in general can have no conception of the manner in which many, many of the children live, whole families crowded together contrary to the laws of decency, so that the gross immoralities of the community become subjects familiar to the sight, and thus those witnessing them lose, in a great degree, the idea of their enormity. Things have transpired in my primary schools, even, that have led me, when possible, to separate the sexes in the upper class. The argument that both sexes are reared together in the family loses its force when the family is made up of hundreds of children from as many different homes.

My own experience when my children were in a mixed school greatly strengthened my convictions on the subject.

Teachers for a boys' school, peculiarly adapted to the work, would often be less successful with the other sex, and *vice versa*. In the proper conduct of a school lies the great success of the instructor. The teacher's ways must be agreeable to the pupils, their ideas must be in harmony in order to accomplish the best results, and I am thoroughly convinced that but very few teachers can be equally adapted to both sexes.

Instruction in sewing and in manual training generally can be better arranged when the school is made up of one sex; and so with physical exercises, boys would enjoy and profit by many movements less suitable for girls.

Young girls should not be subjected to the sight of corporal punishment as inflicted upon boys in mixed schools. I think parents are often deterred from sending daughters (or should be) to the public schools on account of the punishment witnessed there.

The personal preferences of boys and girls for each other, and the intercourse to which it leads, are detrimental to close attention to study.

I spent eight years as usher and submaster in the Mayhew school for boys, and, therefore, do not speak exclusively from the standpoint of a girls' school.

ROBERT SWAN.

CLERGYMEN.

ROXBURY, *May 30, 1890.*

I have been for many years one of the trustees of Antioch College, in Ohio. The system of the coeducation of the sexes was introduced in that college at its foundation, and has been continued ever since. I do not think that any person acquainted with the college would wish to change it. This seems to me a fair instance for your

purpose, because a large part of the students in this institution are connected with a preparatory school, which receives pupils at about the age of those who would attend high schools here.

As is very well known to you, the practice of all the towns in the Commonwealth, excepting Boston, has always been to receive pupils of both sexes, whatever was their age. The old country academies thought of no other system, and are all organized on that basis.

I wish somebody would say why the Boston schools were ever organized on any other basis. I have paid a good deal of attention to our daily school education here, and I never knew. This is, however, certain, that Boston is the exception to the policy and habit of the Commonwealth for two hundred and fifty years.

EDWARD EVERETT HALE.

JAMAICA PLAIN, *June 3, 1890.*

In my opinion the "coeducation of boys and girls in high and grammar schools" is a good thing for the boys and not harmful to girls. Most boys have much of the barbaric in them. The presence of and association with girls helps to humanize and civilize them. So far as the mere acquisition of knowledge and intellectual development are concerned, I do not think it makes any difference whether boys and girls are associated or separated.

Yet, of course, the acquisition of knowledge and intellectual development are not the only things for which our schools are maintained. We want our boys to grow up gentlemen. The society and presence of girls is a powerful means to this end.

As regards the attraction which each sex has for the other, which, I take it, is the supposed source of the evil that may arise from the coeducation of the sexes, I think the separation of the sexes has a tendency to lead to the very evils it is supposed to guard against.

As a boy and youth I was in both kinds of schools, and that is my judgment of the two systems.

The male sex, whether young or old, is greatly benefited by association with the female sex; and so society as a whole is benefited. And to be a benefit to the body politic is, I take it, one purpose of the public schools. One of the most public sources of the degradation of Oriental countries is the separation of the sexes.

I was three years in the army during our civil war, and could not help noting the baneful effect upon men of separation from the influence of women. There was a marked tendency to retrogade in all that has to do with refinement and the finer elements of our nature.

Thus, you see, I believe in the coeducation of the sexes, for the sake of the boys.

I hold that it is in many ways helpful to girls; but not in such marked degree as to boys.

S. N. SHEWMAN,
Rector St. John's Church.

---

61 CUSHING AVENUE, *Boston, April 29, 1890.*

I am not aware that any institution that has tried coeducation has ever abandoned it. I believe that in every case the results have been favorable.

For ten years I had the superintendence of the schools of a large town, so that I can speak from experience.

There seems to be no more reason for an arbitrary separation of the sexes during school life than during the period before and after it. They are together in the family and mingle in society, not only without harm, but to their mutual advantage. In the nature of things, boys and girls should be trained up together, since they are to live together as men and women, and need to be taught their true relationship. Separate schools for boys and girls are relics of a monastic age, when women were regarded as inferior beings. But in our day it is proved that woman has the capacity for the highest culture and ability to engage successfully in the various affairs of life. The sphere of woman has so enlarged that many avocations that formerly were held exclusively by men are now open to women, and women are pursuing them with success. Hence women, as well as men, need a broad and high education.

But whilst coeducation offers equal advantages to both sexes, it does not compel a dead level of uniformity. Eclecticism is now dominant in the higher schools of learning. This elective system affords ample scope for choice of studies to meet the special needs of women.

I am confident that the objection made to coeducation on moral grounds has been proved to be groundless.

The testimony from the schools where coeducation has been practiced is to the effect, that not only no harm comes from the mingling of boys and girls in the classroom, but that the results are positively good. Personal observation has led me to

the conviction that coeducation is better for mind and morals than education of the sexes in schools apart. There is less rowdyism and more earnestness among boys, and less unlady-like conduct and fewer escapades among girls, in mixed than in separate schools. There is danger for the young of both sexes anywhere, but there is nothing gained and much lost by their separation in the class room. There one is both a stimulus and a restraint on the other. Jean Paul says, "To insure modesty I would advise the educating of the sexes together. But I will guarantee nothing where girls are alone; and still less where boys are alone." Coeducation means a development of life into manly and womanly completeness.

R. J. ADAMS, D. D.,
Pastor Stoughton street Baptist Church.

—

92 SEAVER STREET, *Roxbury, April 29, 1890.*

I. It is a great stimulus to intellectual endeavor, promoting an ambition for successful scholarship.

II. It is also a very powerful inducement to the cultivation of habits of personal neatness, to a creditable demeanor and general refinement of manners. The very disparities of household training manifest in a public school are so exhibited in the school room where the prevailing mode of mind among the pupils is more observant and ambitious than elsewhere, that they powerfully plead for the better examples, and thus tend more to refine than to degrade.

III. Such effects greatly aid the discipline and promote the general success of the school.

IV. The evils incident to the inevitable association in life of weak or ill-regulated young persons of different sex would seem to be in a measure guarded against and held in check when that association is largely within the range of educational relations, and is thus necessarily in a good degree guided by their elevating influences.

A. H. PLUMB,
Pastor Walnut Avenue Congregational Church.

—

FIRST BAPTIST CHURCH, COMMONWEALTH AVENUE,
Boston, Mass., April 29, 1890.

I know of no valid reason why coeducation should not be a universal and permanent feature of our common-school system. The separation of the sexes is detrimental to both. It belongs to the very essence of free government and a Christian civilization that the sexes should be mutually respectful and mutually helpful (with proper supervision a school may be as innocent as a home), and this they can be only through a proper education together. The world moves forward, not backward. Coeducation is increasing in the higher institutions of learning. The coeducation ought to begin in the grammar school, and continue. Life is a coeducational school.

I did not know that the question of coeducation was any longer debatable, at least as far as regards the earlier stages of education.

PHILIP S. MOXOM.

—

I was so educated; I believe it to be the better plan; it has a tendency to take from the boys roughness and coarseness, and cultivate more gentlemanly deportment.

In literary pursuits I can not see that anything is lost.

I am decidedly in favor of coeducation of the sexes. I had an experience of seven years, and that was the order then.

The best class I ever had in Sunday school was a mixed class, and secured the best attendance and a more thorough knowledge of the lesson.

C. H. BROWN.
Superintendent B Avenue Baptist Sunday School.

—

57 RUTLAND STREET, *Boston, Mass., April 29, 1890.*

I unhesitatingly record myself as in favor of coeducation of the sexes. I have two daughters in attendance upon the Everett School, and a young son in the Rutland Street primary department. I do not know that coeducation is important so far as the girls are concerned, but believe it to be of incalculable advantage to the boys. And yet I am persuaded it is better even for the girls.

WM. NAST BRODBECK,
Pastor of Tremont Street M. E. Church.

109 COLUMBIA STREET, *Dorchester, May 5, 1890.*

I am a firm believer in coeducation of the sexes, in all grades from the kindergarten to the university, also in professional schools. I am unable to understand why, in our educational institutions, we should adopt a principle of separating the sexes which does not obtain anywhere else in life. It seems to me that beneficial effects only are seen where the sexes are together, as in Cornell University, Ann Arbor, and the Meadville, Pa., Theological School.

GEORGE H. YOUNG,
Pastor New South Church.

BOSTON, *May 13, 1890.*

I am entirely in favor of the coeducation of boys and girls in both grammar schools and high schools.

In the West, where the first seven years of my life in America were passed, such coeducation was, I think, universal, and it was what I there saw of it which impressed it upon my mind as the best plan. It was a new thing to me, for, in England, coeducation beyond the infant school is almost unknown.

BROOKE HERFORD,
Arlington Street Church.

SOUTH BOSTON, *May 13, 1890.*

I am in sympathy with the plan of coeducation of the sexes.

1. It is the plan of nature in the family. Boys and girls in the family together are a great blessing.

2. I know how it worked at Antioch College, Ohio, where my father-in-law (a conservative) was president for seven years.

He was a convert, I know (Rev. Dr. George W. Hosmer).

3. I think more refinement of manners possible where boys and girls are in the same room and in the same recitations.

We are too sensitive about the influence of social contact. Nature in the young (as a rule) promotes purity of manner, where all the conditions are elevating. Intellectual training in itself develops moral perception too.

WILLIAM H. SAVARY,
Minister of Unity Chapel.

CHARLESTON, *May 14, 1890.*

I think, on reflection, that the question of coeducation of the sexes in high and grammar schools admits of a variety of answers, according to conditions.

1. Age of pupils: Up to ten or twelve years of age, children may safely and profitably be educated together. Whether in city or country, in bad or good neighborhoods, the benefit outweighs possible danger (always excepting the worst localities).

I would keep the children together in grammar schools as long as the teachers think it best to do so, always seating boys and girls apart, but mixing them in recitations according to scholarship.

2. In bad quarters of a city (where the state of moral and social life is low), when the pupils need much discipline, boys and girls may wisely be wholly separated in schools; also when some more respectable children are in the school.

3. In high schools: (*a*) If a school is quite limited in numbers let the sexes study, recite, come, and go together. High schools generally draw pupils from the better classes of the people. (*b*) In large high schools the two sexes are better apart; each in a school by itself.

Because (1) supervision on so many pupils is more difficult.

(2) With each sex by itself, discipline can be better enforced when pupils are numerous, and study will be less interrupted.

(3) Emulation is sufficient when many are together without the additional stimulus of sex rivalry which, in a smaller school, keeps up the standard to some extent.

(4) In large schools more danger of the influence of reckless pupils and teachers have less personal influence on individuals.

4. The teachers can tell better than anyone else whether the conditions in any given school are favorable or unfavorable to coeducation. It is a subject on which general conclusions are theoretical rather than practical.

5. Separate college education by all means.

A. S. TWOMBLY,
Pastor Winthrop Church.

ADDENDA.—Sex susceptibility affects students less than many suppose, when they are kept hard at work in schools.

Boys and girls are generally shy of each other (except among the lower classes) between 14 and 19 years of age. Youths at that age segregate by sex. The question of coeducation at that period is more concerning its influence on effective study than as a matter of moral and social expediency.

38 DARTMOUTH STREET, *Boston, April 29, 1890.*

My opinion is not favorable to the coeducation of the sexes in our grammar and high schools. Admitting its possible intellectual stimulus, I deprecate its effect upon morals. The objection does not hold with reference to coeducation in our colleges and universities any more than to our primary schools, but only to that class of our youth presumably between the ages of 13 and 17. Of course I concede exceptions to the rule, but, speaking in general terms, observation and experience would lead me to negative such a proposition as the one suggested.

JAMES M. GRAY,
Rector First Reformed Episcopal Church.

—

BOSTON, *May 2, 1890.*

In looking over the history of education it would seem that the coeducation of the sexes was a method which had been tried and discarded, and had long since passed out of the region of speculation.

The stimulative influence of the competition created, which is claimed in its favor as one of its greatest advantages, can be shown, I think (though producing brilliant passing effects), to be the cause of most disastrous final results. Competition in all directions is proving itself a most pernicious influence, and is being dropped from the highest methods of dealing in all departments of life.

But nature seems to have answered the question for you most conclusively.

Education is for two purposes: (*a*) The training of the intellectual capacity; (*b*) the fitting of the individual for a distinct work in life.

On the question of intellectual capacity as between man and woman there can be no dispute. They are evidently created to be the companions of each other intellectually as in every other way. The only question is how to attain the best results with the mental power that is given. It seems hardly necessary to argue that the best possible intellectual results will be gained by subjecting two persons so physiologically unlike to exactly the same laws and methods of training, just at a time in life when these differences demand the most careful recognition on both sides.

Is it not because this point is not recognized that there is this constant restlessness and agitation upon this very question? Recognize the needs of both, and not subject both boys and girls to virtually the same system, and we shall have more manly and more womanly intelligence in the affairs of life, and this question of coeducation can never arise.

The same may be said also of the second purpose of education; women have a great special work for humanity assigned them which men can never perform. To its fulfillment woman's whole nature, moral and physical, is most delicately adjusted. Upon her intelligent discharge of this task depends the whole fabric of family, social, and national life. For this a special training is as much needed to-day as it is almost universally neglected. There is nothing, in my opinion, more essential to the life of humanity than this distinct higher education of woman, which nature itself demands.

These are some of my reasons for my opinion that there should not be a system of coeducation of the sexes beyond the very first rudiments of instruction.

GEORGE J. PRESCOTT,
Rector of the Church of the Good Shepherd.

—

209 W. CANTON STREET,
Boston, Mass., April 30, 1890.

From the time that boys and girls are old enough for the grammar school until they are ready for college they should be kept apart. I was "coeducated" from the time that I began to go to school until I was graduated from Boston University, and I am fully persuaded that free association during the time that I have indicated is fraught with danger to both sexes.

GEORGE A. CRAWFORD,
Pastor Broomfield Street M. E. Church.

—

SOUTH BOSTON, *April 28, 1890.*

While I can bring forward no new argument, yet I feel that the old ones are sufficient to justify me in condemning coeducation. The argument of propriety is all sufficient in my judgment. There are dangers at an earlier period of life in our grammar schools; how much greater are not such dangers apt to be in high schools? And while I admit that youths may receive a stimulus to study, and, also, perchance,

a certain refinement, if you will, by coeducation, yet do I perceive also dangers which may more than balance such advantages. What these dangers are parents and educators and others experienced in affairs may easily surmise. In short, I have no difficulty in condemning coeducation, and deem the separation, which now happily exists, the very best.

D. O'CALLAGHAN,
Rector St. Augustine's Church.

—

BOSTON, *April 28, 1890.*

I would not educate the sexes together at any age. Adolescent appetite manifests itself rapidly between 14 and 18 years of age.

The sedentary habit of long hours stimulates physical function.

Familiar approach of the morally unschooled, the nonreligious, and the actually vicious it is impossible wholly to prevent in coeducation.

Pseudo-attachments are likely to spring up and pave the way to unfit "engagements" or affiancings.

The presence of the other sex is more or less distracting to application to the curriculum. In city life at best manhood and womanhood are stimulated to premature ripening, especially in these days of flash novels and bare-legged theatricals, conditions different from the country school district.

Consult that noble man and true Christian—whom I have long known personally—Anthony Comstock, as to your problem.

The specious argument of the coeducation of the sexes in the home and the church needs but a moment's examination. The parent loves and guards as a teacher does not. Kinship sanctifies as promiscuous commingling does not. Religion and positive morals are present in the one case and wholly lacking in the other.

It is the universal testimony that coeducation in colleges tends powerfully to loss of personal respect, except the young women virtually live like hermits.

In my opinion the young sexes should first learn approach at home. There is a delicacy, a sweetness, a dignity, a refinement which a young girl, unfamiliar with the society of the opposite sex, brings with her from the cloister when she "enters society" at a proper age. The experience of civilization, from feudal times to now, among the best social class is worth considering.

Coeducation is democracy gone to seed.

EMORY J. HAYNES.

—

JAMAICA PLAIN, *Boston, May 1, 1890.*

1. It is seriously detrimental to the morals of boys and girls to place them together under such circumstances, particularly in the grammar school.

Unless the teachers are persons of much wisdom and of strong influence for good over the pupils, vulgarity is an almost inevitable feature of the intercourse of the boys and girls. I have known cases where even under ordinarily good teachers the moral atmosphere of the school was vulgar in the extreme. I meet every day pupils of one of the largest grammar schools for boys in Boston, and one of the best situated, with whom it would be impossible to associate girls without results most harmful to both sexes. The vulgarity and profanity is already deplorable and can not well be reached by any except the parents, many of whom, of course, have no desire to correct such things.

2. The spirit of rivalry generally excited between the boys and girls of the better class in the matter of studies is especially harmful to the latter. Girls ought not to be taught under the same methods as boys. There are periods when they should be relieved from the burden of school work, and when the nature of the class work should be so changed as to give them the greatest possible variety, and the least possible amount of nervous wear and tear.

JOHN E. TUTTLE,
Pastor Central Congregational Church.

—

72 ALLEGHANY STREET, *May 1, 1890.*

The following considerations are of influence with me as against any greater commingling of the sexes:

1. Many of the children come from unregulated homes, and it is questionable how far other children should be compelled to hear and learn from unfortunate remarks and incidents, which arise from want of early discipline in every mixed class.

As far as possible children should have the advantages of common-school education without risks.

2. The association of boys and girls in the same building, but not in the same classes generally, furnishes the best elements to be derived from some education of boys and girls, brothers and sisters in the same set of companions.

3. Many teachers—perhaps most—have distinct fitness for girls or boys, and do much less satisfactory work with the opposite sex or when they are mingled in the class room.

WILLIAM R. CAMPBELL,
Highland Congregational Church.

Nonprofessional opinions.

CAMBRIDGE, *May 29, 1890.*

I am very strongly in favor of the coeducation of the sexes.

This opinion dates back to my early life, when, as a day scholar in what was then considered the best boarding school near Boston (that of William Wells, in Cambridge), I was struck with the greater decency and refinement of the day scholars, who lived at home and with their sisters, as compared with those who lived only among boys. Afterwards, as usher in another large boarding school (that of Stephen M. Weld, of Jamaica Plain), I noticed just the same superiority. This impression has never passed away from my mind.

Since then, while on the school committee of three different places—Newbury and Worcester, Mass., and Newport, R. I.—I have seen the process of abolishing separate schools and bringing the sexes together; and always with satisfactory results as to discipline, manners, and morals.

I am satisfied that there is in each sex an instinctive desire for the good opinion of the other, and that this is a very powerful aid and stimulus in the hands of the teacher. As a remarkably good teacher, Mr. William Reed, now of Taunton, said to me forty years ago at Newburyport: "I never yet saw a school which I could not manage by the waving of a finger, if I could only have boys and girls together."

This is now generally admitted as to boys; but there is often an impression that what the boys gain the girls lose. Here again I must quote a very able teacher, Mrs. Caroline C. Leighton, sister of the well-known educational authoress, the late Jane Andrews, and as good a teacher. When in Worcester, about 1855, we changed her girls' grammar school into a mixed school, she said soon after: "I was willing that the change should take place, because I thought we owed it to the boys, although I thought it would be bad for the girls. But now I am satisfied that it is for the benefit of both, and has done as much for the girls as for the boys."

When I was on the school committee of Newport, one of our very best grammar-school principals, a woman, took a day to visit Boston grammar schools. After her return she said to me, "I should never wish to teach a public school in Boston. They seem to me perfectly tame and uninteresting, from having one sex only." When I questioned her farther she said: "I rely on my girls to give steadiness and regularity to my school; they are more punctual and get their lessons better. But I rely on the boys to bring outside life into the school, to know what is going on in the world, to illustrate the lessons from what happens in the streets and on the wharves. Neither would be sufficient alone; both are needed for the material of a good school." I thought I had never heard the precise state of the case better put.

THOMAS WENTWORTH HIGGINSON.

MILWAUKEE, *June 8, 1890.*

In the West there has never been any doubt as to the feasibility or advisability of coeducation. In Wisconsin and Michigan both, this system has been fully in practice, and the University of Wisconsin gives equal privileges to both boys and girls. I have never heard of any difficulty or scandal arising from this intermingling of the sexes at school.

I was educated in such a school myself, and my experience teaches me that there is a certain emulation or desire to stand well in the eyes of the opposite sex, which stimulates the pupils in such a school to greater mental exertion, and makes them more zealous in the pursuit of knowledge. Girls are usually quicker in their perceptions than boys of the same age, consequently boys derive the greatest benefit from this comradeship. Contact with the gentler sex also smooths the rough edges of a boy's manner, and develops the chivalrous side of his character, making him more manly, more honest and straightforward than he would be if accustomed only to the society of boys like himself. There is still a good deal of the savage in man, and this trait is more likely to develop itself when men herd together.

On the contrary, a girl who is brought up in the companionship of boys is more likely when she arrives at womanhood to estimate men at their true worth, and is less likely to become the prey of the first designing adventurer whom she meets.

Your inquiry strikes a Wisconsin man or woman somewhat as would an investigation into the advisability of allowing men and women and boys and girls to occupy the same pews in church. Coeducation has been so thoroughly accepted and so long practised in the West, that we have to speculate as to the probable effects of a return to the old monastic system.

Mrs. D. H. JOHNSON.

In regard to the coeducation of boys and girls in high and grammar schools, I am entirely in favor of it, believing it to be for the advantage of both sexes to mingle freely in all departments of education.

I have not had a very large personal experience, but have had under my care a boy and a girl who were passing through a coeducative high school. In neither case did I see any evil or disadvantage arising from coeducation; but on the contrary a natural healthy friendship with those of the other sex. I should entirely approve of the principle of coeducation, from the lowest primary school to the highest university or professional school.

EDNAH D. CHENEY.

PHYSIOLOGICAL AND HYGIENIC BEARINGS OF HIGHER EDUCATION FOR WOMEN WITH SPECIAL REFERENCE TO COEDUCATION.

Reference has already been made to Dr. Clarke's book, Sex in Education. In the opening chapter the author discussed the physiological constitution of woman, and set forth conclusions which he had formed from clinical observation. In the fourth chapter he marshaled the "laws of development," which he says "we have found physiology to teach," and his personal conclusions as an argument against coeducation. With respect to the public discussions then in progress, the pith of the book was in this chapter, since it was immediately seized upon as presenting an unanswerable argument against opening to women institutions originally designed for men alone.

The citation from this chapter, given below, is interesting as showing the manner in which Dr. Clarke applied his argument, and also the care with which he avoided open opposition to the general movement for the higher education of women, that had already become irresistible. Against Dr. Clarke's position little more could be adduced, at the time, respecting coeducation, than individual convictions. Mr. Higginson, however, considerably lessened the effect of Dr. Clarke's argument by exposing the small basis of fact upon which it rested and pointing out, categorically, the classes of facts which were required in the premises and which, in his opinion, were already attainable. This portion of Mr. Higginson's article, which formed a chapter in "Sex and Education," is also reproduced. It should be added that the subsequent investigations by the Collegiate Alumnæ Association were the natural outcome of this call for facts. The data collected related to the health history of 705 graduates from 12 colleges or universities open to women, 9 of the institutions claiming 247 of the graduates being coeducational.

The Massachusetts Bureau of Statistics of Labor, at that time (1885) under the direction of Hon. Carroll D. Wright, undertook the preparation and publication of the material, and it is to be found in full as part v of the sixteenth annual report of that bureau. The summary of results which, under the circumstances, must be regarded as entirely impartial, is inserted here after the citation from Mr. Higginson.

Two years after this report was published the similar inquiry already noted was undertaken by a committee of women's colleges at Oxford and Cambridge (England). These colleges are indeed not coeducational, but this fact does not lessen the significance of the investiga-

tion so far as regards the strain of scholastic work, since the students are prepared for the same examinations as their brothers at Oxford and Cambridge.

The results of this investigation are presented in pamphlet report, of which the summary is here cited, together with a single table in which the results of the American and the English investigations are compared.

Sex in Education.

By Dr. Edward H. Clarke.

[Pages 121–127.]

Before going further, it is essential to acquire a definite notion of what is meant, or at least of what we mean in this discussion, by the term coeducation. Following its etymology, *con educare*, it signifies to draw out together, or to unite in education; and this union refers to the time and place rather than to the methods and kinds of education. In this sense any school or college may utilize its buildings, apparatus, and instructors to give appropriate education to the two sexes as well as to different ages of the same sex. This is juxtaposition in education. When the Massachusetts Institute of Technology teaches one class of young men chemistry and another class engineering, in the same building and at the same time, it coeducates those two classes. In this sense it is possible that many advantages might be obtained from the coeducation of the sexes that would more than counterbalance the evils of crowding large numbers of them together. This sort of coeducation does not exclude appropriate classification, nor compel the two sexes to follow the same methods or the same regimen.

Another signification of coeducation, and, as we apprehend, the one in which it is commonly used, includes time, place, government, methods, studies, and regimen. This is identical coeducation. This means, that boys and girls shall be taught the same things, at the same time, in the same place, by the same faculty, with the same methods, and under the same regimen. This admits age and proficiency, but not sex, as a factor in classification. It is against the coeducation of the sexes, in this sense of identical coeducation, that physiology protests; and it is this identity of education, the prominent characteristic of our American school system, that has produced the evils described in the clinical part of this essay, and that threatens to push the degeneration of the female sex still further on. In these pages, coeducation of the sexes is used in its common acceptation of identical coeducation.

Let us look for a moment at what identical coeducation is. The law has, or had, a maxim that a man and his wife are one, and that the one is the man. Modern American education has a maxim that boys' schools and girls' schools are one, and that the one is the boys' school. Schools have been arranged, accordingly, to meet the requirements of the masculine organization. Studies have been selected that experience has proved to be appropriate to a boy's intellectual development, and a regimen adopted, while pursuing them, appropriate to his physical development. His school and college life, his methods of study, recitations, exercises, and recreations, are ordered upon the supposition that, barring disease or infirmity, punctual attendance upon the hours of recitation and upon all other duties in their season and order may be required of him continuously, in spite of ennui, inclement weather, or fatigue; that there is no week in the month, or day in the week, or hour in the day, when it is a physical necessity to relieve him from standing or from studying, from physical effort or mental labor; that the chapel bell may safely call him to morning prayer from New Year to Christmas with the assurance that if the going does not add to his stock of piety it will not diminish his stock of health; that he may be sent to the gymnasium and the examination hall, to the theaters of physical and intellectual display at any time; in short, that he develops health and strength, blood and nerve, intellect and life, by a regular, uninterrupted, and sustained course of work. And all this is justified both by experience and physiology.

Obedient to the American educational maxim that boys' schools and girls' schools are one, and that the one is the boys' school, the female schools have copied the methods which have grown out of the requirements of the male organization. Schools for girls have been modeled after schools for boys. Were it not for differences of dress and figure, it would be impossible, even for an expert, after visiting a high school for boys and one for girls, to tell which was arranged for the male and which for the female organization. Our girls' schools, whether public or private, have imposed upon the pupils a boys' regimen, and it is now proposed, in some quarters, to carry this principle still further by burdening girls after they leave

school with a quadrennium of masculine college regimen; and so girls are to learn the alphabet in college as they have learned it in the grammar school, just as boys do. This is grounded upon the supposition that sustained regularity of action and attendance may be as safely required of a girl as of a boy; that there is no physical necessity for periodically relieving her from walking, standing, reciting, or studying; that the chapel bell may call her as well as him to a daily morning walk, with a standing prayer at the end of it, regardless of the danger that such exercises, by deranging the tides of her organization, may add to her piety at the expense of her blood; that she may work her brain over mathematics, botany, chemistry, German, and the like, with equal and sustained force on every day of the month, and so safely divert blood from the reproductive apparatus to the head; in short, that she, like her brother, develops health and strength, blood and nerve, intellect and life, by a regular, uninterrupted, and sustained course of work. All this is not justified, either by experience or physiology. The gardener may plant, if he choose, the lily and the rose, the oak and the vine, within the same inclosure. Let the same soil nourish them, the same air visit them, and the same sunshine warm and cheer them: still, he trains each of them with a separate art, warding from each its peculiar dangers, developing within each its peculiar powers, and teaching each to put forth to the utmost its divine and peculiar gifts of strength and beauty. Girls lose health, strength, blood, and nerve, by a regimen that ignores the periodical tides and reproductive apparatus of their organization. The mothers and instructors, the homes and schools, of our country's daughters would profit by occasionally reading the old Levitical law. The race has not yet quite outgrown the physiology of Moses.

SEX AND EDUCATION.

A Reply to Dr. Edward H. Clarke's Sex in Education.

Article by Thomas Wentworth Higginson, pp., 35–44.

It has been pointed out, again and again, in the Woman's Journal and elsewhere, that there are whole classes of facts to be had bearing most closely on this question which neither Dr. Clarke nor any physiologist opposed to coeducation has yet attempted to obtain. Instead of shrinking from these facts, we are constantly begging for them. Until they are obtained, systematized, and displayed, the whole argument of Dr. Clarke has but an insufficient basis of facts. They are such as these:

1. We need facts as to the comparative physiology of American women in different localities. There are highly educated communities and very uneducated communities. Has Dr. Clarke, or any one, compared the health of women in cities and in country towns; in cities with good schools and cities with poor schools; or in highly educated States like Massachusetts and Connecticut, as compared with States where the climate is similar but the school system less thorough? The standard of female education is not very formidably high in Pennsylvania, where they also have an equable climate, no east winds, and most comfortable living; and yet one of Dr. Clarke's severest statements as to female debility (p. 112) comes from Pennsylvania.[1] In country villages I could name, where there are only very poor district schools, kept for less than half the year, the traveller constantly observes, among the farmers' daughters, cheeks as pale and vitality as deficient as in the best educated metropolis.

2. Again, we need facts as to American-born women of different races. Dr. Clarke says of a century, "that length of time could not transform the sturdy German fräulein and robust English damsel into the fragile American miss." (P. 168.) How does he know it could not? I have seen this change very nearly effected in a single generation among the children of English, Irish, French Canadians, and even the Nova Scotians, whom he so praises; and this in families where even reading and writing were rare accomplishments. As far as I can observe, the effect of climate, change of diet, change of living, on all these classes, is almost sure to produce the same result of delicacy, almost of fragility, in the second generation, with or without schooling; and among the boys almost as much as among the girls. A physician in a large manufacturing town once told me that the unhealthiest class of the community, in his opinion, consisted of the sons of Irish parents.

[1] "Today the American woman is, to speak plainly, physically unfit for her duties as woman, and is, perhaps of all civilized females, the least qualified to undertake those weightier tasks which tax so heavily the nervous system of man. She is not fairly up to what nature asks from her as wife and mother. How will she sustain herself under the pressure of those yet more exacting duties which now-a-days she is eager to share with the man?" (Wear and Tear, by S. Weir Mitchell, M. D., of Philadelphia, quoted in 1873.)

3. We need also the comparative physiology of different social positions. As a rule, the daughters of the wealthy in America, who are sent to private schools, or taught by governesses, are far less severely taxed as to their brains than the daughters of the middle classes who go to the public schools. Is Dr. Clarke prepared to show that those of the former class are decidedly more healthy? If so, this is another point that would have a direct bearing on his argument. My own impression is that he would find it hard to prove this.

4. But there is still a fourth class of facts, only to be obtained by an extensive record of individual instances. Letting go all discriminations of locality, race, and social position, and looking only at individuals under similar conditions, is Dr. Clarke prepared to assert that as a rule, it is the hardest students in the school who become invalids? He would say, on a *priori* grounds, that it must be so. But do facts show it? Looking over families and schools that I have known, I certainly can not say that the young girls who have lost their health were the most studious—quite as often the contrary. I have asked teachers of wide experience, "Have you observed that your best scholars have furnished the larger proportion of invalids?" and they have always said "No." Yet who that knows the affection with which teachers are apt to follow the later career of their pupils will deny that this evidence has much value. Here is a fourth class of facts which have a direct bearing upon the subject, and the ignoring of which weakens the value of our author's statement.

5. I am struck with the further point that Dr. Clarke seems to have entered on his inquiry in the spirit of an advocate, not of a judge, and to have taken absolutely no account of the physiological benefits of education for women. There certainly are many instances—all teachers have known them—of great benefit to health, in case of girls, under the stimulus given by study. Either Dr. Clarke knows such instances, or he does not. If he knows them, he is bound to state them in such an argument; and, if possible, to arrange and tabulate them, in order to set them against the instances on the other side. If he does not know them, it simply shows that, while the facts of disease impress the physician, the facts of health may elude him.

SUMMARY OF RESULTS OF A SPECIAL INQUIRY INTO THE HEALTH OF FEMALE COLLEGE GRADUATES, BY THE ASSOCIATION OF COLLEGIATE ALUMNÆ.

[Sixteenth Annual Report of the Massachusetts Bureau of Statistics of Labor, pp. 528-532.]

Referring briefly to the results as shown by the tables, it appears—

That the graduates are largely of American parentage; that the greater part of them spent their childhood in the country and had a fair amount of out-door exercise daily.

That 57 per cent began study in a school and 41 per cent at home, the remaining 2 per cent failing to answer; that the average age at which they began study was 5.64 years; at entering college, 18.35 years; at graduating from college, 22.39 years; and that the average present age is 28.58 years.

That during college life the majority studied but moderately; that 44 per cent did not worry over their studies or affairs; that they were generally regular as regards hours for eating and sleeping, took a proper amount of physical exercise daily, and, as regards nearly one-half of them, abstained from exercise wholly or in part during the menstrual period; that, as a rule, they entered society but little, and for the most part had college roommates.

That since graduation all seem to have found congenial occupation, a great many as teachers, while 8 only are occupied with social duties to the exclusion of other occupation.

That about one-fourth have married, and that of the whole number of children born by them, the greater part are living and in good health.

That, for all the various periods of their lives, the health of over three-fourths of the graduates has been either excellent or good; that during college life a slight falling off from excellent or good health is apparent, resulting in an increase in number reporting fair health, while, on the other hand, the number reporting indifferent or poor health is smaller than for any preceding period, and but slightly in excess of the number reporting the same conditions of health for the succeeding period or since graduation.

That over one-half of the graduates are not and have not been troubled with nervousness, and that nearly 25 per cent have had no trouble at any time during the menstrual period.

That about 60 per cent have had some disorder; the more common disorders reported relating to the stomach, liver, bowels, lungs, nervous system, generative organs, neuralgic and rheumatic affections, and, to a certain extent, to the heart and brain.

That the most prevalent cause of disorders is constitutional weakness, the other causes being bad sanitary conditions, intellectual overwork, emotional strain, and physical accident.

That the varying conditions of childhood, as shown in the comparison tables, have had no marked influence for good or evil upon the present health of graduates.

That the present health of graduates seems to have been affected according as their parents have enjoyed either good or poor health, the figures showing 3 per cent increase in the health for those whose parents were both in poor health.

That so far as inherited tendency to disease is concerned, a decline in health has also taken place, as compared with the average good health of all the graduates, those inheriting tendency to disease from either parent showing a decline in health of 3 or 5 per cent, those inheriting tendency to disease from both parents of nearly 20 per cent, while in the case of those who have no hereditary tendency to disease, there has been an increase of nearly 3 per cent in good health.

That during college life about 20 per cent show a deterioration in health, 60 per cent no change, and 20 per cent an improvement; that for those who entered college at 16 years of age and under, an increased deterioration in health of between 10 and 11 per cent as compared with those who entered at a later age is observed, and of over 8 per cent as compared with the whole number whose health deteriorated.

That during life there was nearly 2½ per cent less deterioration in health as compared with the deterioration in health reported during working time by the working girls of Boston.

That those who studied moderately show an increase in health of over 3 per cent as compared with average good health during college life for all graduates, while those who studied severely or moderately to severely show a decline of from 5 to 7 per cent as compared with average health during college life.

That, as compared with average good health during college life for all graduates, those who worried over personal affairs, a decline in health of over 10 per cent; those who worried over both studies and affairs, a decline in health of 15 per cent, while those who worried over neither studies nor affairs, show an increase in health of 10 per cent.

That for those graduates who studied severely during college life, as compared with the average good health of all graduates, a decrease in health of 7 per cent at time of entering college is shown; during college life a decrease in health of over 5 per cent, and since graduation of exactly 6 per cent; that if, on the other hand, the health of these graduates at time of entering, during college life, and since graduation are compared with each other, without regard to the health of all the graduates for the three periods, there was a decrease in health during college life of less than 2 per cent, an increase in health since graduation of three-fourths of 1 per cent as compared with health at time of entering college, and of over 2½ per cent as compared with health during college life, and finally,

That although the average good health of these graduates who studied severely was considerably less than the average good health of all the graduates for the three periods considered, their health did not suffer material deterioration during college life, and has more than recovered since graduation its normal state at time of entering college.

The facts which we have presented would seem to warrant the assertion, as the legitimate conclusion to be drawn from a careful study of the tables, that the seeking of a college education on the part of women does not in itself necessarily entail a loss of health or serious impairment of the vital forces. Indeed, the tables show this so conclusively that there is little need, were it within our province, for extended discussion of the subject.

The graduates as a body entered college in good health, passed through the course of study prescribed without material change in health, and since graduation, by reason of the effort required to gain a higher education, do not seem to have become unfitted to meet the responsibilities or bear their proportionate share of the burdens of life.

It is true that there has been, and it was to be expected that there would be a certain deterioration in health on the part of some of the graduates. On the other hand, an almost identical improvement in health for a like number was reported, showing very plainly that we must look elsewhere for the causes of the greater part of this decline in health during college life. If we attempt to trace the cause, we find that this deterioration is largely due, not to the requirements of college life particularly, but to predisposing causes natural to the graduates themselves, born in them as it were, and for which college life or study should not be made responsible. A girl constitutionally weak is always at a disadvantage, and naturally would suffer

a deterioration in health, temporary possibly, or even permanent, if, at the most trying period of her life, from 18 to 22 years, she seeks superior education. At the same time we should not fail to emphasize the fact that fully 30 per cent of the total deterioration in health during college life was from excellent to good only. In the case of those graduates who studied severely even, the facts reported concerning their physical condition do not show that they have suffered materially from the effects of close application, but that they have since graduation returned to the normal condition reported by them at the time of entering college.

In conclusion it is sufficient to say that the female graduates of our colleges and universities do not seem to show, as the result of their college studies and duties, any marked difference in general health from the average health likely to be reported by an equal number of women engaged in other kinds of work, or in fact, of women generally without regard to occupation followed.

Summing up the results of our investigation, we may, I think, say with confidence that there is nothing in a university education at all especially injurious to the constitution of women or involving any greater strain than they can ordinarily bear

without injury. Women generally pass through it without its affecting their health one way or the other. As was to be expected, however, some improve in health and some deteriorate, both improvement and deterioration being sometimes the effect of conditions of college life and of circumstances more or less connected with it, though probably more often due to constitutional or other causes for which college life can not be either praised or blamed. The net result of the change is that as large a proportion of the women who have had a university education enjoy good health now as did so at the time they entered college, while the number in poor health, among those who have read for honors, is somewhat reduced. These results confirm those of the similar inquiry previously conducted in America.

As mothers of healthy families we have seen that the students are more satisfactory than their sisters, and so far as we can judge quite up to the average of women.

We have set down as a fact unfavorable to a university education for women, a temporary falling off during college life of about 5 per cent in good health as compared with either health at entering or present health. This to some extent depends on illness or other things occurring accidentally during the college course, and to some extent is probably due to the relaxing climate of our universities; but it is also partly caused by overwork and want of attention to well-known laws of health, and to this extent both could and ought to be prevented by reasonable care on the part of students themselves.

That any serious alarm as to the effect of university education on the health of women is groundless is clearly shown by the fact that the net amount of increase in good present health, as compared with health between 14 and 18 years of age, is greater in the case of students than of their sisters.

In 1874 Prof. Fairchild, of Oberlin, wrote as follows:

"A breaking down in health does not appear to be more frequent with women than with men. We have not observed a more frequent interruption of study on this account, nor do our statistics show a greater draft upon the vital forces in the case of those who have completed the full college course. Out of 84 who have graduated since 1841 7 have died, a proportion of 1 in 12. Of 368 young men who have graduated in the same time 34 are dead, or a little more than 1 in 11. Of these 34 young men 6 fell in the war, and leaving out those the proportion of deaths remains 1 in 13. Taking the whole number of graduates, omitting the theological department, we find the proportion of deaths 1 in 9¼; of ladies 1 in 12, and this in spite of the lower average expectation of life for women, as indicated in life-insurance tables."

The Boston School Document already cited (No. 19, 1890) presented the opinions of 49 physicians of that city, of whom 30 favored coeducation, two of the number with some reservations, and 19 opposed the policy. The following citations present substantially the special arguments advanced by this class of professional men.

Opinions of Physicians.

[From Boston School Document No. 19, 1890.]

16 Union Park, *Boston, April 30, 1890.*

I consider the coeducation of boys and girls in grammar and high schools not only permissible, but highly beneficial to both sexes.

First. I consider it of moral importance that the influence of the boy and the girl upon each other should be exercised from early youth, so that each sex would become familiarized with the other's way of thinking, speaking, and feeling.

Second. Such an influence would materially strengthen the health through the intellectual discipline produced, while the physical condition of the girl would necessarily be improved through the association with the boy, because she will be less likely to hurry on nervously with her studies; the intellect of the boy being somewhat slower in its development, the girl will find in the boy's nature a wholesome counterpoise; thus to both boy and girl will be assured a slower and more thorough advance in study, and more time either for physical rest, physical development by culture in plays and games, or outdoor recreation. This latter is sadly lacking in girls' schools, as usually the ambitious pupils and their teachers strive simply for one object, namely, to be equal to, or in advance of, the boys' schools. The result too often produced is an early ripeness of intellect without a corresponding ripeness of physical conditions.

Marie E. Zakrzewska, M. D.

ROXBURY, *April 29, 1890.*

1. My personal experience of coeducation has been favorable. It was the method pursued in the public schools of Brookline, where I was brought up, and in the high schools of which I subsequently taught. I believe it has advantages over the separate system, and in schools representing the well-to-do middle classes of society I see no objections to it.

2. The only considerable argument against it, that girls require at certain periods special exemption from work for physiological reasons, falls through when, even though the sexes are separately educated, yet the standard for both sets of schools is identical, so that no indulgence can be, or at any rate is, granted the girls over what is given to the boys.

3. I am inclined to think that in certain localities of large cities where the social and moral tone is very low, and teachers have no aid from parents in restraining pupils out of school hours, coeducation might be open to some objections on the score of morality.

CHAS. F. WITHINGTON, M. D.

---

93 MOUNT VERNON STREET, *Boston, May 2, 1890.*

It seems to me there are three general questions to be considered: first, the effect upon the health; second, the effect upon morals and manners; and, third, the effect upon the mental training and development. I am unable to find any conclusive evidence that the morals of either sex are vitiated by coeducation, and I believe that the manners of the boys and young men are improved. It seems the natural way that the two sexes should be educated together, at least so far as the grammar and high schools go. In the family where there are boys and girls, both sexes seem to develop more normally. To be sure one hears of grave moral deflections happening occasionally among school girls or boys; but this does not prove, it seems to me, that the coming together, as they do in mixed schools, is the cause of it; is not the true cause, rather, bad outside influences and the neglect of wholesome home influences?

I have been a teacher in a mixed high school myself (the Cambridge High) and I have talked with others who have been connected with mixed schools in one way or another, and from our experience we can find no evidence of any general lowering of the moral tone, and the single cases which have occurred are not proven to have been the result of coeducation. Looking at it from a purely medical and physiological side, one has to consider this question: Is it prejudicial to the normal development of either sex to bring them together at school *at* and after the age of puberty? Puberty is a critical time with both sexes, perhaps more so with the girls; then it is that the nervous system has to be especially guarded from overexcitement; then it is that the girls are likely to be morbid, etc. The home influence ought to be the guarding and guiding hand which safely brings the boy and girl through this period, and with tolerable care at home I can not see how the bringing together for the comparatively short time of the school hour will act injuriously on either sex. On the contrary, may it not obviate those morbid tendencies so common to the age of development?

Lastly, there is the question of partial rest once a month for the girls at the menstrual epoch. Is not this an objection to the mixed systems? Will not the girls feel compelled to do the same work at such times as in the intervals, to their injury and suffering? The girls are, as a rule, more ambitious than the boys, and do more work, and can afford to relax a few days each month and still keep up with the boys. Of course, just what should be each girl's plan as to work during these times must be determined by her sensations and feelings, together with wise advice at home, if possible. Here also I believe morbid conditions are less likely to arise if, as in a mixed school, less attention is attached to this physiological function.

As to the mental training and development, I believe it makes very little if any difference in the results whether the boys and girls are educated separately or together; this so far as the purely school work is concerned. In addition, however, with coeducation, I believe, as I have mentioned, that the manners of the boys are improved; they learn to be more gentle, and the girls learn some "robuster virtues."

While writing this I have had the opportunity to speak of the matter with Prof. Sedgwick, of the Massachusetts Institute of Technology, and from his experience in mixed grammar and high schools, and in his own department at the institute, he quite emphatically concurs in my opinion.

EDWARD O. OTIS, M. D.

138 BOYLSTON STREET, *Boston, May 15, 1890.*

At the age when the most of the pupils of our high schools—and the same might apply to a certain extent to the grammar schools—are sent there, the natural functions of the adolescent organism are undergoing more complete development, and the person of either sex is passing from the period of childhood toward that of maturity, or at least of perfect development; and certain functions which have lain dormant until this time are awakening into life, and arouse new and unknown sensations and emotions. There is also at that time an increased need of careful and appropriate training, of judicious restraint over the associations and surroundings, both moral and physical, which form the environment of the individual. The boys of our community are at this time more restless than heretofore, and often traits of character of new and sometimes uncontrollable nature are developed. To a certain extent this is also true of the opposite sex.

The high schools take their pupils from various districts of the city, and often from out of the city, and these pupils are thereby removed from the influences which have thus far surrounded them; they are brought into association with other boys or girls whom their parents can not know, and often they are exposed to influences which parents or guardians would strive to protect them from if this were possible. I am in a position to speak from experience, and I think that vast harm is done to many pupils in the high schools from the mingling of boys from so many directions, and I have seen many, many cases of impairment both of health and character which are traceable to this cause. This was not long ago illustrated in a most alarming manner among the pupils of Eton, and I could mention examples in our own city. If, now, the membership of our higher schools were made up of both boys and girls, I can not think that the absence of knowledge on the parents' part of the associations which might be formed between the individuals of such a homogenous collection of pupils would operate to the detriment of educational ends, and would not infrequently cause great misfortune. In an institution which I have visited, in which the education of the pupils of 15 to 20 years is carried on in common, I was told by one of the teachers that great trouble is experienced in the regulation of the relations between the pupils, and that often very embarrassing situations are encountered.

For these reasons, and others which I do not think it necessary to mention in this inquiry, I would express the opinion that coeducation of the sexes in our higher schools or in the grammar schools is not, under existing circumstances, either judicious or advisable.

ALBERT H. BLODGETT, M. D.

VIEWS OF COLLEGE AND UNIVERSITY PRESIDENTS AND PROFESSORS, WITH ACCOUNTS OF SPECIAL PROVISION FOR THE HIGHER EDUCATION OF WOMEN, ESTABLISHED IN CONNECTION WITH UNIVERSITIES.

[Dr. F. A. P. Barnard, president Columbia College, New York, N. Y. Report of 1879.]

Expediency of receiving young women as students.—The condition of the college is now such as to justify the suggestion of the question whether its advantages should not be open to young women as well as to young men. This question has been brought to the attention of the trustees heretofore by outside parties, and the reception which it met has been such as to indicate that the minds of the board are not favorably prepossessed in regard to it. There has been hitherto, however, no room for considering it upon its merits; for whether regarded favorably or not, so long as the college was confined within recent narrow accommodations the measure has been impracticable. Not that the admission of young women requires any considerable provision of space greater than that which is necessary for young men only; but that, in arriving at and leaving the building, they need their separate retiring rooms and cloak rooms, and no apartments could be found in the old building suitable for this purpose. That difficulty no longer exists. The measure has become practicable. There can be no harm in inquiring whether it is not also expedient.

Many considerations suggest themselves which make in its favor. In the first place, there can be no doubt that among many of our most judicious thinkers, and possibly with even a majority, there exists at this time a profound conviction that, in the interests of society, the mental culture of women should be not inferior in character to that of men. The condemnation of that kind of female education which in past years has been too prevalent, in which the useful has been made subordinate to the ornamental, and what are called accomplishments have taken the place of solid acquisitions, is all but universal. The demand has been made and its reasonableness has been generally conceded, that the same educational advantages should be offered to young women which young men enjoy. But when the question is

raised as to how that demand shall be met, there is no longer found to prevail the same unanimity.

One obvious method is to improve the female schools. Of such institutions there are, and have always been, a sufficient number; but the fault of most of these is that they furnish the merely superficial and ornamental education of which complaint is made. Such can not be improved except by reconstruction, for their instructors can not rise above their own level, and their proper level is indicated by the teaching they have been accustomed to give.

Another method is to create colleges for young women identical in form with the existing colleges for young men, embracing in the scheme of instruction the same subjects in the same order, and conferring at the end of the course the same academic degrees. Examples of this kind of institution are seen at Vassar College, in this State, and at Rutgers Female College, in this city. The objection to these is that they can not, or, at least, in general, will not, give instruction of equal value, though it may be the same in name with that furnished to young men in the long-established and well-endowed colleges of highest repute in the country, and that it is unjust to young women, when admitting their right to liberal education to deny them access to the best.

* * * * * * *

In more than half the colleges of the United States young women are admitted on the same terms as young men, and attend the same instructors in the same lecture halls at the same hours. The usage is more general in the Western than in the Eastern States. But we have two conspicuous examples, the Cornell and the Syracuse universities, in our own State, and there is one in Massachusetts, the Boston University, and one in Connecticut, the Wesleyan. Yale College admits young women to her School of the Fine Arts. In the Michigan University, which, in numbers and in standing, ranks among the leading educational institutions of the country, out of a total of more than 400 in the School of Letters and Science, between 70 and 80 are young women. The colleges of the country, excluding those under the control of the Roman Catholic Church, are, according to the latest enumeration, 355 in number, of these 183 are open to students of both sexes.

In many of these colleges the students are permanently resident, separate buildings being provided for the female students. The Sage College at the Cornell University, founded by the liberal friend of education whose name it bears, is a splendid edifice erected for this purpose. In others, as at Syracuse, the students of both sexes, with few exceptions, attend at the college only during the day, and out of class hours reside at home or in private families. This arrangement relieves the instructors of responsibility for general supervision and leaves no room for the occurrence of troublesome questions of discipline.

As to the practicability of adopting this plan in our college, no question will be raised; but doubts may be entertained as to its expediency. It would be difficult, nevertheless, to suggest any reason which will bear very close examination why it should not be adopted. The admission of young women into the classes would not, in any manner, interfere with and embarrass the processes of instruction as they are now conducted. No modification of the arrangements of the class rooms would be necessary. So many more units would simply be added to the number and so many more names to the class roll. In every scholastic exercise the young women would be regarded as the young men are regarded—merely as students.

It can not be denied that there is, in some minds, a feeling of aversion to this proposition which does not seek to defend itself by reasons, but inclines those who entertain it to dismiss the subject without argument. This is probably owing principally to the fact that the admission of young women into colleges is an innovation upon immemorial usage. The spirit of conservatism never fails to rise up against novelties, no matter how cogent the arguments by which they may recommended. That it is this spirit mainly which opposes the opening of colleges to women, rather than anything inherently objectionable in the proposition itself, is made quite evident by the fact that no such opposition manifests itself to the association of students of both sexes in the academies and high schools with which the country abounds, many of which profess to teach the same subjects as the colleges, to the same extent, and to pupils of similar ages, differing chiefly in the fact that they have not a determinate course of four years, and do not confer degrees in arts.

The opposition to the proposal which has its source in the feeling here referred to is no doubt the most serious of the difficulties in the way of its adoption, simply because feeling is not controlled by judgment, but remains often unchanged after the understanding is convinced. Objections are, however, sometimes made to the plan which appeals to the reason. Thus, there are those who hold that the average female intellect is inferior in native capacity to that of the stronger sex, and hence infer that the association of the sexes in the same classes will have a tendency to depress the standard of scholarship. It is unnecessary here to go into the general argument upon this point, for it is not in the effort to master those elementary facts

of knowledge or principles of science which form the material and the instrument of early mental training that the relative ultimate strength of different minds can be tested. There is in some intellects a quality of activity, of quickness of perception and readiness of combination, which, within given limits of time, is more than a compensation for more slowly moving power. And this is a quality which observation has proved to be peculiarly characteristic of the female mind. Similar observation, moreover, has pretty well established that, as a rule, girls are more diligent in study than boys, a fact which has an important influence on the record of their scholarship.

The experience of institutions where this point has been practically tested proves, moreover, that the presence of young women as members of college classes tends to a result directly the reverse of that which the objection supposes, and has the effect to raise rather than to depress the average scholarship of the classes to which they belong. In regard to this matter, the results derived from a comparison of the record made in Cornell University during the years preceding and the years following the opening at that institution of the Sage College for women, which have been kindly furnished to the undersigned by Vice-President Russel, are exceedingly interesting as well as instructive.

In order to understand the significancy of these it is necessary to bear in mind that in every college a larger or smaller proportion of the matriculates of a given year usually drop off before the close for a variety of reasons, among which are failure of health, failure of means, the disciplinary acts of the faculty, and loss of position in consequence of defective scholarship. All these causes, except the last, are pretty uniform in their operation; and, with the same exception, the effect of all of them united is never very considerable. The variations, then, in the total magnitudes of the losses, when successive years are compared with each other, must be mainly due to the operation of the cause last mentioned, the varying numbers who fail from deficient scholarship.

Now it appears that at Cornell University, during the years which preceded the admission of young women, the losses during the year averaged 26 per cent, or more than a quarter of the entire number of the matriculates, per annum, while for the seven years that have passed since that date the losses have averaged only 16 per cent per annum. During this latter period the standard of attainment for admission has been twice raised, and the term examinations have been made steadily more and more rigorous. Either of these causes might have been supposed likely to increase the proportion of losses, yet no such effect has followed from both of them together. It has been added in a statement by an officer of the University recently printed that "these seven years have witnessed a marked improvement in the quality of the whole institution," and further, a very noteworthy fact, that during the entire period "no young woman has been dropped from the rolls through failure at examination." So far as the experience of this institution is concerned, the evidence is quite conclusive that the admission of young women as students into college classes has the effect to raise rather than to depress the standard of scholarship.

Another objection to the plan is found in the assumption that the course of study prescribed in colleges is too severe to be attempted without danger to the delicate constitutions of young women. This proposition has been elaborately maintained by an eminent authority, whose views have had a wide circulation, and have, to some extent, impressed the public mind. So far as these views are founded on *a priori* consideration, they are mere opinions, to which the opinions of other authorities no less weighty may be opposed. So far as they are founded on observation of injurious results presumed to have followed from overtasking the physical powers by excess of study, it would be easy to demonstrate by similar examples that the course of college study is too severe for young men as well.

But this argument, if it proves anything, proves too much. It is not the kind of study which harms, if study harms at all, either young women or young men, it is the quantity; and certainly, valueless as the teaching in many young women's "finishing schools" may be, it is usually heaped up upon its victims to an extent not inferior to that which the college course requires. It is inconceivable that the exercise of the mind upon the solution of an algebraic problem, or the interpretation of a passage in Homer, can be more exhausting than a similar exercise over the French irregular verbs, or even so much so as the confinement of hours daily in bending wearily over the drawing table or drumming on an ill-tuned piano. The argument of the objector, however, begs the whole question by assuming that this is really the case, while his opponent might reply that if he has proved anything he has simply proved that young women ought not to be educated at all.

Of course no one will contend that excess of study can not but be injurious to the young of either sex. If young women in college commit this error they will suffer for it, and so will young men. We see examples of this kind occasionally in the youth of our own college, but however we may regret these, we do not consider it

advisable to discourage young men from entering college on that account. Could it be proved that the studies taught in college offer to young women a more dangerous temptation to excess than those which from the substance of the more ornamental education they have been heretofore accustomed to receive, the fact might suggest the propriety of greater vigilance to arrest this tendency, but it certainly could not justify us in cutting them off from these so fascinating studies altogether.

There is one consideration bearing on the plan in question which is positively favorable, and is not without importance. The presence of young women in colleges is distinctly conducive to good order. Nothing is more certain than that the complete isolation of young men in masses from all society except their own tends to the formation of habits of rudeness, and to disregard of the ordinary proprieties of life. No degree of good breeding, no influence of social refinement in the family circle, can effectually secure a youth against this danger. It is this which explains the frequent participation of young men in college in acts which in other situations they could not be induced to countenance, and would even regard as reprehensible. Any circumstance, whatever it may be, which destroys this isolation, and subjects the youth to the wholesome influences which protect his moral tone in the ordinary environment of society, can not but be beneficial. Such is the effect of the presence of women in college. On this point the undersigned is able to speak with the authority which belongs to knowledge experimentally acquired. As an officer of the University of Alabama, it was his custom for years to invite the attendance on his lectures of classes of young women from a neighboring female seminary, and others resident in the town of Tuscaloosa. The advantageous effect of this upon the manners of the young men was a subject of common observation, and the results were so satisfactory that the example was followed by other officers of the same institution, so that scarcely a day passed without the presence of young women in one or another of the college classes. These were not matriculated students, it is true, and they did not directly mingle with the young men, but this circumstance tended rather to diminish than to increase the influence which their presence exerted, and yet this influence was very decided.

The elder Silliman, during the entire period of his distinguished career as a professor of chemistry, geology, and mineralogy in Yale College, was accustomed every year to admit to his lecture courses classes of young women from the schools of New Haven. In that institution the undersigned had an opportunity to observe, as a student, the effect of this practice, similar to that which he afterward created for himself in Alabama, as a teacher. The results in both instances, so far as they went, were good; and they went far enough to make it evident that if the presence of young women in college, instead of being occasional, should be constant, they would be better.

But it is still objected that though the association of young women with young men in college may be beneficial to the ruder sex, it is likely to be otherwise to the gentler. The delicacy and the reserve which constitute in so high a degree the charm of the female character are liable, it is said, to be worn off in the unceremonious intercourse of academic life, and the girl who enters college a modestly shrinking maiden is likely to come out a romping hoiden or a self-asserting dogmatist. Those who make this objection argue rather from assumed premises than from any facts of observation. It is sufficient to say that the experience of the high schools of the country fails to furnish ground for this impression, and that no such results have been observed in any of the numerous colleges in which the experiment has for years been tried.

There is another and final objection less frequently urged in these discussions than those above enumerated, yet probably often in the minds of those who do not urge it, which is founded on the supposed disturbing influence which sentimental causes may exercise over the spirit of study. If young people of both sexes are associated in the same institution, and thus permitted to meet frequently and familiarly, their thoughts, it is imagined, will be likely to be more constantly occupied with each other than with their books. An appeal might here again be made to experience to show that this danger is exaggerated. And it might be said with justice that the comparative freedom of school intercourse tends far less to excite the imaginations of impressible youth, and clothe for them the objects of their possible admiration with unreal charms, than do the more constrained and less frequent opportunities of mutual converse afforded in general society.

But, however that may be, the argument is inapplicable to the circumstances of our particular case. Here no opportunities for intimate intercommunication exist at all. The students attend only during a limited number of hours daily, and during their attendance they are constantly in class and occupied either in listening to instruction or in the performance of their own scholastic duties. No common halls of assembly exist, in which they may gather either before the exercises of the day commence or after they are over. From their retiring rooms, which will be entirely cut off from every other part of the building, the young women will pass directly to

the lecture room, and at the close of their daily tasks will retire in the same way. Throughout the entire duration of the college course they will be resident in their own homes and surrounded by every protecting safeguard that parental solicitude can provide. If it is really desirable that the educational advantages offered to young women should be equal to those which young men have been so long permitted to enjoy, it would seem to be neither reasonable nor right that they should be excluded from the institutions where such advantages exist. If it is not desirable, of course the argument falls to the ground.

The measure here under consideration, should it meet with approval, would not probably be productive of any immediate visible effect. Few young women would be likely to present themselves as candidates for admission within the next few years, because there are few in this community who are likely to have given attention to the studies required as preparatory to the college course. But after that period, in a great city like this, a very considerable attendance might be anticipated, and thus our college would enter upon a new and important field of usefulness.

Whatever may be the fate of the present suggestion, the undersigned can not permit himself to doubt that the time will yet come when the propriety and the wisdom of this measure will be fully recognized; and as he believes that Columbia College is destined in the coming centuries to become so comprehensive in the scope of her teaching as to be able to furnish to inquirers after truth the instruction they may desire in whatever branch of human knowledge, he believes also that she will become so catholic in her liberality as to open widely her doors to all inquirers without distinction either of class or sex.

[Citations from the Boston School Document No. 19, 1890.]

AMHERST COLLEGE, *Amherst, Mass., May 6, 1890.*

President Seelye requests me to acknowledge his receipt of your favor of April 21, and to say that in his judgment the coeducation of the sexes is both desirable and practicable in the early stages, and he thinks that it might be properly conducted through both the grammar and high schools; but in his judgment the differentiation of sex, which is quite as manifest on the mental as on the physical side, requires a different curriculum for the two in their college course.

EDWARD B. MCFADDEN,
Secretary.

—

BOSTON UNIVERSITY, *Boston, May 8, 1890.*

In my opinion, the coeducation of the sexes in high and grammar schools, as also in colleges and universities, is absolutely essential to the best results in the education of youth.

I believe it to be best for boys, best for girls, best for teachers, best for taxpayers, best for the community, best for morals and manners and religion.

At the time of the opening of the Boston Latin School for girls, I pleaded as hard as I could in favor of the opening of the then existing Latin school to both sexes, instead of starting a new and separate school for girls. Since that time I have seen no reason to change my views. So far as I can judge, Boston would do wisely to repair the mistake, and to organize all her schools on the plan followed at Cambridge, and in so many intelligent and prosperous cities.

W. F. WARREN,
President.

—

CARLETON COLLEGE, *Northfield, Minn., May 8, 1890.*

It seems to be divinely ordained that boys and girls should be brought up together in the same family; and no good reason is apparent to me for separating them at the school-room door. Both mentally and morally they are mutually helpful in stimulating and in restraining each other, and therefore necessary to a symmetrical development of character. Any so-called reform which forbids coeducation in our grammar and high schools is what Dr. Bushnell would call a "Reform against Nature."

JAS. W. STRONG,
President.

—

ARKANSAS (INDUSTRIAL) UNIVERSITY, *May 10, 1890.*

Judging from the work in this university preparatory department, both sexes are benefited by reciting in the same class rooms.

E. H. MURFEE, *President.*

DRURY COLLEGE, *Springfield, Mo., May 10, 1890.*

Our institution is coeducational, and the preparatory department is of the same grade as the high school; but the conditions are peculiar, in that we have a lady principal who has charge of the young ladies who live at the college, and who, with the other teachers, maintains a general supervision. Our regulations are not excessively strict by any means, nor do we have any restrictions upon the social relations of the students beyond those which good sense and regard for proprieties suggest.

Coeducation presents no peculiar difficulties with us. It is taken as a matter of course. Its effect upon the manners of the students is, I think, good. Occasionally an intimacy springs up which is disadvantageous, but I am by no means sure that such incidents are more frequent than would be found to occur among young people differently circumstanced. On the other hand, I am inclined to think that the daily association of young people of both sexes, under wise teachers, may be helpful in the way of correcting much that would be false in thought and imagination.

As regards class-room work, physical strength, intellectual capacity, etc., I see no difference. There are bright boys and dull boys, and there are bright girls and dull ones. Occasionally a girl shows the effect of overwork, and occasionally the same thing is seen among the boys. It is a matter of strength, endowment, etc., rather than of sex.

F. T. INGALLS.

—

LITTLE ROCK UNIVERSITY, *Little Rock, Ark., May 8, 1890.*

I believe that the coeducation of boys and girls in high and grammar schools, if under proper restrictions and guards, is a good thing.

M. L. CURL,
President.

—

DELAWARE, OHIO, *May 16, 1890.*

We have had coeducation in the Ohio Wesleyan University since 1876. No evil effects have resulted here. Our young men are more gentlemanly and our young ladies are more vigorous in their work because the two sexes recite together. Upon the whole, our experience is decidedly favorable to coeducation. I believe the experiment would prove a success in your high and grammar schools.

J. W. BASHFORD.

—

BATES COLLEGE, *Lewiston, Me., May 17, 1890.*

After an experience of twenty-seven years, we heartily believe in coeducation in an institution like ours, and we should hesitate to offer any objection to it in high and grammar schools.

O. B. CHENEY, *President.*
By J. Y. STANTON, *Secretary.*

—

WILLIAMS COLLEGE, *Williamstown, Mass., May 7, 1890.*

So far as I have observed the working of the coeducation of the sexes in high schools, it has not been attended with evil results. It seems necessary that ordinary caution be observed, but the competition of boys and girls in the same classes has usually been productive of intellectual activity. I do not think that the danger of immorality is increased by the meetings incident to well-regulated instruction and exercise in and about the same building. I must add that I have not had opportunity for very extensive or thorough observation.

FRANKLIN CARTER.

—

OBERLIN, OHIO, *May 7, 1890.*

Oberlin College has tried coeducation in all departments from its beginning, in 1833. We are thoroughly satisfied with the experiment, and believe it is the most natural and the most wholesome way under reasonable conditions. I do not think any of the faculty would fail to say the same thing of coeducation in high and grammar schools.

HENRY C. KING,
Associate Professor of Mathematics.

OHIO STATE UNIVERSITY, *Columbus, Ohio. May 10, 1890.*

An experience of twenty years has convinced me that for nine-tenths of college students education of the sexes together is better than the education of them separately. The presence of those of the opposite sex is a stimulus in study and a restraint in conduct. The frivolous and foolish will be frivolous and foolish under either system.

I have no special knowledge of high schools and grammar schools to justify an opinion concerning coeducation in them.

W. H. SCOTT,
President of the University.

VASSAR COLLEGE, *May 13, 1890.*

As a member of a school board in an Eastern city, I was accustomed to schools in which boys and girls were educated together, but where, during the recesses, there was an absolute separation of the sexes. I never saw aught in these schools to call for unfavorable comment.

In our high school a similar law was enforced, only there was a considerable separation of the sexes in classes as well. But in many lines of study they worked together, and without unfavorable comment.

I see no objection to such a plan. The expense of a separate system makes it impossible in most places, nor does it seem at all imperative on other grounds. But I am sure it is necessary that boys and girls of the age of most of those in our higher schools need careful watching where they are thrown so indiscriminately together.

One or two may poison a large number, and necessarily our schools must include every kind.

J. M. TAYLOR.

SCHENECTADY, N. Y., *May 12, 1890.*

I am opposed to coeducation in colleges, but have never studied the question as it relates to high and grammar schools, and do not consider myself entitled to express any opinion.

H. E. WEBSTER,
President Union College.

BALTIMORE, *May 9, 1890.*

I consider the coeducation of boys and girls in high and grammar schools objectionable.

IRA REMSEN,
Acting President, Johns Hopkins University.

MASSACHUSETTS INSTITUTE OF TECHNOLOGY,
Boston, June 3, 1890.

I have never taught in high or grammar schools, but after thirteen years' experience can speak in terms of unqualified approval with regard to coeducation in higher grades.

I was educated in a school and college where none of the other sex were admitted, and naturally was of the opinion that such a course was not desirable. When compelled to admit ladies to my classes I regarded it as a mistake, and endeavored as far as possible to keep them apart, and only with great anxiety, and by slow degrees, permitted any intermingling in the class-room.

The results obtained have been so advantageous that now I have thrown off all restraint in the class-room and laboratory, and subject all students to exactly the same discipline and rules, no attention being paid to sex, but the students arranged alphabetically and in every respect treated alike, and I am satisfied that coeducation can be carried on successfully, provided all artificial barriers are swept away; and the nearer we come to this the better will be the result.

There are natural advantages from the mingling of the sexes, and the strongest argument against it is a moral one, which, however strong it may be out of the schoolroom, loses its force in it.

THOMAS E. POPE.

ANN ARBOR, MICH., *August 22, 1890.*

In every respect salutary. Our young men are better behaved on the whole—more gentlemanly.

In some subjects the women surpass the men; in others the opposite is true. On the whole, I do not think our standard has declined. The university has certainly made great strides forward since women were admitted, in 1871. This is, of course, due to a variety of causes; but I do not believe that the women have in any way retarded the onward movement. In some respects they have certainly facilitated it.

ISAAC N. DEMMON.

—

The objections against coeducation in colleges, as far as they relate to the effects upon women, are discussed as follows (in Education, January, 1893) by Dr. J. L. Pickard, ex-president of State University, Iowa City, Iowa:

Before proceeding to a discussion of the question it is proper that coeducation be defined. The well-nigh universal practices of Western colleges and universities will define the term with sufficient clearness.

Young men and young women are invited to pursue their studies together in the college, as has been their custom in the high school and academy. They are subjected to an identical examination for admission. They are required to choose from many courses of study offered them. When choice is made they attend upon the instruction of the professors at the same hour, and of course in the same class room. Requirements as to attendance, to preparation, to examinations are identical. They pass from year to year upon the same basis of scholarship. They have equal opportunities for winning scholarship honors. They graduate upon the same day, present their theses upon the same platform, and receive diplomas entitling them to enjoy the privileges of the same degrees.

The objections made to coeducation in colleges are entitled to respectful consideration.

(1) Sex manifests itself in the intellect no less than in the bodily structure and functions. To ignore sex in educational processes is against nature, and must result in disastrous failure. Let it be admitted. Is any psychologist wise enough to draw the line of demarkation, and to assign these studies as proper to the female mind and those to the male? When the attempt is made shall we not find many studies upon each side of the line? Will not similarities exceed differences? The opening of pursuits and professions to women within the last few years has brought into clearer light what is common to the sexes and differences are less prominent.

The modern coeducational colleges recognize the differences and provide varied courses of study. The influence of sex will determine the choice made. In some feminine minds there may be a masculine element which will affect the choice. The same may be true upon the other side. Will the friends of separate schools ignore nature and presume to correct what they claim to be abnormal?

The objection proceeds upon the theory that all courses of study are constructed with sole reference to the masculine mind. The days of the "trivium" and the "quadrivium" are long past. Science, literature, and art present more than seven roads to a degree. No two applicants need pursue the same road in all its windings. There is ample range for the demands of sex in education. But is it best that these demands be met in their entirety? Because there is sex in education, coeducation claims candid consideration. In the economy of nature each sex has its place, not in studied separation and exclusion, but in mutual strengthening and restraint. And in no direction is the influence of sex stronger or more complementary than in that of mental culture. Female colleges of the higher grade recognize the fact in the sometime selection of male presidents and male professors. Male colleges do not as yet reciprocate. If it be true that formative forces are the better where strength and grace are combined, who will claim that these forces emanate solely from the teacher's rostrum? The daily mingling of students furnishes the opportunity for the exercise of subtle yet powerful influences in the formation of character. This leads to the consideration of a second objection.

(2) Womanly virtues are endangered by the greater familiarity which coeducation permits. President Porter expressed the thought when he said, in advocating woman's education, that he wished it to be in "womanly ways." The "womanly way," as I understand it, is in the line of sacred and refining influence upon our social life. This power, like all others, gains strength by constant exercise. How can it be cultivated when opportunity for its exercise is denied. Man, too, needs training in manly ways. But the manly way is that of refined strength. Does the seclusion of the boys' college bring grace to movement, polish to manners, purity to thought, refinement to strength? Many of us who were shut out from real society during a college course can recall many scenes where awkwardness or boorishness has brought a blush of shame to the cheek when returned to real life in the presence

of our sisters—an awkwardness by no means relieved in the presence of those who for the same number of years had learned of man only through glimpses obtained in the occasional party or in the sensational novel, in neither of which does the true man appear.

Sex in education? Yes. It is God's plan. He will give it all needed force. It requires no stimulus, such as separate schools emphasize. Its action must not be reflex. For this reason I would urge the fact of sex in education as an argument for coeducation. Where will one find more manly men and more womanly women than in a family of brothers and sisters under the guidance of a loving father and mother. "That our sons may be as plants grown up in their youth, that our daughters may be as corner stones polished after the similitude of a palace."

The family is the unit of society. The home is designed to be the citadel of virtue. If God's purpose be attained it will only be through the union of strength and grace in the makers of the home. Why take away from either sex the opportunity to form a thorough, a rational acquaintance during the years wherein such acquaintance is ripening into a life companionship? As well attempt to teach astronomy in a windowless room, or botany in a paved city court, as to expect the starlight of pure love or the flowers of sincere affection to reach the hearts of those who touch each other's lives only in formal society, or who know nothing of each other's character except as gathered from occasional meetings when society demands studied restraints of the real self.

Let each sex test the other's strength in the class room and respect for real worth will take the place of sentimentalism. Acquaintance will be formed upon the higher plane.

Those experienced can tell of the happiness of a married life, the road to which lay through the class room, society halls and contests for intellectual supremacy which a coeducational college afforded.

Observation in coeducational work for nearly fifty years since my graduation warrants me in declaring the well-nigh universal happiness of those who have formed their life attachments during a period of study in coeducational institutions. Indeed, of married classmates or college mates I recall no instance of unhappy results.

Not many years since the opponents of opening a boys' school to the girls of the same city, based their opposition upon the injury to the moral character of the girls by permitting them to occupy the same class room with their brothers and the friends of their brothers. The natural inference must be that girls are too weak morally to withstand the temptations of male society, under the restraints of the best teachers both male and female. Such an argument is an insult to the girls or a stigma upon their brothers.

If I could so far forget my experiences, or so far shut out the light of observation as to entertain even the shadow of a suspicion that coeducation can in the least degree prove prejudicial to public morality or to womanly refinement, I would raise my voice loudly in favor of entire separation of the sexes in all our colleges. Says Ruskin: "The soul's armor is never well set to the heart unless a woman's hand has braced it, and it is only when she braces it loosely that the honor of manhood fails."

There remains one argument having greater weight with many than either of those thus far considered.

(3) Woman's physical nature demands a difference in treatment as to hours of study; as to times of physical exercise and the character of such exercise; as to regularity and uniformity of tasks assigned. Undoubtedly true. But give to the plan of coeducation its legitimate development—place in professional chairs, without distinction in salary, representative men and women and these differences will be recognized and dangers will be averted.

After all the danger is more apparent than real. A woman will study as a man does and will control the circumstances attending her. A woman will pursue her studies in a woman's way. Attempted prescription will end in disastrous failure. No two men pursue exactly the same methods in attainment of knowledge, as stated near the beginning of this article. A wide opportunity for choice is given, and it is but reasonable to suppose that woman regards her physical nature in making her choice. She has also had due regard to her future.

Can it be proven that woman's health is not endangered under the processes of coeducation?

A few years since the following facts were obtained from President Fairchild, of Oberlin, which was one of the earliest coeducational colleges in America. During a given period of years under review, he ascertained that of 84 female graduates 7 had died, 8⅓ per cent. For the same period of 368 male graduates 34 had died or 9¼ per cent. So much for those who have entered active life after graduation. What can be said of those in the active pursuit of study? A school of 600 pupils ranging in age from 14 to 18 years—the majority girls—furnishes from its records the fact

that absences caused by ill health were for a year 1 per cent less in case of female than of male pupils, though the distance traversed varied from half a mile to 7 miles each day.

In scholarship young women bear off their full share of honors. Herein says Dr. Edes in the Boston Medical and Surgical Journal of March 9, 1882, the danger threatens woman. "What we are to name that impelling force which drives on the girl to pursue her studies with a tireless sort of energy it is not easy to say. It seems to be a compound of conscience, ambition, and a desire to please in varying proportions with a peculiar feminine sort of obstinacy, which in a better cause and reasonably directed would demand admiration rather than pity. A boy of moderate ability even with some ambition to do well is apt soon to realize his true position and content himself with such moderate scholastic honors as are easily within his reach. * * * In this he has an immense advantage over his sister, that he realizes at an early age that many avenues are open to him toward success, and in only a few of these is high scholarship of any advantage whatever."

Admitting this to be true, it is an argument in favor of coeducation since it is reasonable to suppose that the excessive sensitiveness of the girl will be checked in contact with the indifference of her brother educated at her side. But Dr. Edes would not be quoted as attributing the evils he depicts to coeducation, for he says further on: "On looking over my case books I have been surprised to find the same statements repeated again and again, namely, that the sufferer had taken the highest honors at some noted female college." All the cases he cites from his own practice have but few references to school life, but these few are to female seminaries. The same journal of November 24, 1881, gives a table of valuable statistics prepared by Dr. Tuckerman, of Cleveland, Ohio, for which the assistance rendered me by Dr. Lincoln, of Boston, is gratefully recognized. These statistics prove the futility of the argument under consideration.

For physical reasons it is certainly not good policy to cultivate in woman that "impelling force" which Dr. Edes finds it so difficult to define, and which his case book traces to "female colleges." Now is it well to encourage the indifference of the young man. If these tendencies are inherent in sex, might it not be best for both sexes that they be brought into mutual action, and that excessive sensitiveness be checked somewhat in its contact with too great indifference?

Separate schools quite naturally emphasize the tendencies of sex.

The presence of girls in my own class at the preparatory school gave me an inspiration, which was gradually lessened in power during my college course, when boys were my only classmates—boys over whose minds indifference gained gradual power as their years of exclusion advanced.

If no good argument can be adduced against the policy of coeducation in colleges, with either a psychological, physiological, or moral basis; and if it be agreed that under the present plan of organization young men and young women may be educated together as well as in the separate schools—then one strong plea may be made for coeducational colleges on the score of economy. Duplication of all essential equipments—libraries, laboratories, apparatus of a material nature—and of the sources of living inspiration within professional chairs can hardly be justified.

EXPERIENCE OF COEDUCATION AT BROWN UNIVERSITY, PROVIDENCE, R. I.

[Annual Report of the President, June 29, 1893.]

The educational privileges which the corporation at its meeting last June extended to women have been very welcome. Ten women have been pursuing studies in the graduate department the entire year, and the number of regular candidates for undergraduate examinations has been 39. All those who passed the freshman examinations last year are continuing their studies. Of the regular candidates for this year's freshman examinations there are 14. The remainder of the young women making up the 39 are not at present candidates for any degree, though several of them will become such. The scholarship of all is remarkably high, averaging a good percentage, better than that of our men students. The considerable number of women candidates for undergraduate examinations has induced some gentlemen in the faculty to institute means for a systematic preparation for these examinations. Classes are formed in all the branches elected, and they are instructed by the same men who have charge of the corresponding classes inside the university. There has thus sprung into existence a woman's college, technically and legally under the university only so far as its examinations are concerned, yet in effect a department of the university, so closely connected are examinations with the instruction therefor. * * *

While this establishment makes no drain whatever upon the university's financial resources, it adds greatly to its popularity and favor with the community. From present prospects another year will find no fewer than 100 women pursuing studies in connection with the university, either as full members of it, viz, in the graduate department, or as candidates for undergraduate examinations. Applications for registration begin to come in from a distance. In view of the rapid progress which this enterprise is making, I can not but request for it the most attentive consideration of this board and other friends of higher education. * * * The woman's department of the university requires and must soon have an ample, permanent home of its own, a well-endowed and commodious women's college, presided over by an accomplished lady principal. Not less than half a million dollars is needed for this purpose. The college must be part and parcel of the university, giving women students the full university status, and at some time so furnished, endowed, and equipped as to offer them every facility for education, physical and social as well as intellectual, now within the reach of male students. It may be confidently asserted that no other expenditure of half a million dollars could possibly advance the higher life of Rhode Island society in coming time so much as the erection of such a college.

GRADUATE DEPARTMENT OF YALE UNIVERSITY OPEN TO WOMEN.

[Report of the President for 1892, pages 30, 31.]

The plan proposed for the opening of the courses of the study in the graduate department which lead to the degree of doctor of philosophy to graduates of all colleges and universities, without distinction of sex, was mentioned in the last annual report. This plan was brought before the entire body of professors connected with those courses, and was fully considered and discussed by them, in the earlier part of the year. It was presented to the consideration of the members of the corporation at their meeting held in the month of March, and was favorably received by them, and, with unimportant modifications, adopted. The action by which these privileges were offered to graduates of the colleges for young women was everywhere appreciated very highly, as was made manifest both by the favorable comments of the public journals, and by the assurances which came from these colleges and their officers and teachers.

At the beginning of the new academic year twenty-three young women connected themselves with this department of university. They represent all the leading colleges which have been established especially for the education of women, and also some of the most prominent institutions in which young women and young men are educated together. Two of them received fellowships, and three other scholarships, according to the provisions made by the corporation, which were stated in the last report. All of them are pursuing, with much energy and success, the various branches of study to which they have devoted themselves.

STATUS OF WOMEN STUDENTS AT VANDERBILT UNIVERSITY.

[Register 1892-'93, page 29.]

Students by courtesy.—Young women who are not less than 16 years of age, and thoroughly prepared, will be admitted by courtesy to any of the courses of the academic department. They will be subjected to the same entrance examinations for the various courses and to the same rules as to attendance and performance of duty as young men. Though not formally matriculated, they will have the same privileges of instruction as young men, and on the completion of any full course leading to an academic degree will be recommended by the faculty for the same.

The fees will be: For a single course, $20; for two courses, $35; for three or more courses, $50; library fee, $5.

STATUS OF WOMEN STUDENTS AT COLUMBIA COLLEGE, NEW YORK, N. Y.

[Report of Acting President of Columbia College, New York, N. Y., 1889, page 16; also Barnard College Circular of Information, 1889-'90, page 4.]

The collegiate course for women.—This course, established in 1883, to meet an apparent public demand for the higher and better education of young women, has not in its present form proved successful. The college provided examinations, but required that preparation be made elsewhere. The women students desired instruction rather than examination. Accordingly, after an experience of five years, it has been decided

by the trustees to discontinue the collegiate course for women in its present form, and to approve the establishment of an associate but separate school, under the name of Barnard College, in which the instruction shall or may be given by the professors of the college under certain regulations and restrictions. This course will therefore be discontinued at the close of the present year, except for those who have already completed a part of the prescribed studies.

In accordance with this division funds were raised for the equipment and maintenance of a college for women.

The name, Barnard College, was adopted in grateful recognition of the faith and energy with which the late president of Columbia College, Dr. F. A. P. Barnard, for many years supported and promoted the cause of the higher education of women.

This connection of Barnard College with Columbia College was officially recognized by the trustees of Columbia College in March, 1889.

RADCLIFFE COLLEGE, UNDER THE AUSPICES OF HARVARD UNIVERSITY.

[From the Harvard Graduates' Magazine, March, 1894, pp. 339-342.]

On December 6, 1893, the board of overseers of Harvard College, by a unanimous vote, gave its consent to an arrangement to be made between the university and the Society for the Collegiate Instruction of Women. That arrangement had been approved by the president and fellows, and was set forth in certain votes which had been passed by the society and submitted to the president and fellows, and which were as follows:

"*Voted*, That it is desirable to change the name of this corporation (The Society for the Collegiate Instruction of Women) to Radcliffe College, and that proper legal steps be taken to effect that change.

"*Voted*, That it is desirable that this corporation give degrees in arts and sciences, and that a committee of 3 persons be appointed by the president to take steps to obtain from the legislature the necessary power.

"*Voted*, That the president and fellows of Harvard College be, and hereby are, made and appointed the visitors to this corporation, and are hereby vested with all visitorial power and authority as fully as if the same had been originally conferred upon the said president and fellows by the charter or articles of association of this corporation. This vote shall take effect upon an acceptance by the said president and fellows of the powers hereby conferred, but with the provision that said president and fellows at any time may abandon and surrender or limit such powers upon notice to this corporation.

"*Voted*, That no instructor or examiner of this corporation shall be appointed, employed, or retained without the approval of the visitors of this corporation, manifested in such way as said visitors may prescribe.

"*Voted*, That in case the president and fellows of Harvard College accept the powers conferred by the foregoing vote the said president and fellows be requested to empower the president of Harvard University to countersign the diplomas of this corporation and to affix the seal of Harvard University to said diplomas."

By the arrangement embodied in these votes and now accepted and approved by the governing boards of the university, Harvard assumes definite and official relations with the work which has been prosecuted for some time in Cambridge under the popular name of the Harvard Annex. (Pp. 329–330.)

* * * * * * *

In this year, 1894, the annex enters into a declared connection with the university. It has become plain to everyone that the institution had passed its phase of private experiment, and was entitled to some formal recognition by the university.

What shape this should take was a question with many difficulties, for the university scheme had no place ready for the newcomer. Two or three main points were gradually developed by discussion.

In the first place, of course, no one wanted to incorporate the annex bodily into the university, and mingle its students with the young men. It was plain that the young women must be separately cared for, and that their household concerns and domestic economy must be in the hands of a board composed, at least in part, of women. Furthermore, the president and fellows of Harvard College were unwilling to add to their administrative work, already excessively heavy, by taking charge of the property or attending to the executive details of another enterprise, and they preferred, for general convenience, to commit to a distinct body the management of an undertaking which was to be detached, in many respects, from the present organization of the university

It resulted from these considerations that the college for women should have a separate organization, formally independent, and distinguished by its own title. Such a separation does not preclude any relation which the university may wish to establish between itself and the new college, nor prevent changes in that relation whenever they may be found desirable. A college on this footing may hereafter stand toward the university in a position closely analogous to that held by a college in an English university.

What should be the nature of the connection between the two bodies was the next question and the chief one. The university was entirely ready to assume the control of the work of teaching, the most vital matter for the women's college, and to establish, formally and officially, what had hitherto been informally permitted as a private arrangement, that the instructors of the women's college should be those already actually in the university, or specially approved by it, and that the standards and examinations should be identical in the two. It was not easy to express or define this arrangement by a comprehensive phrase. It finally took the shape of a visitorial power, to be assumed by the university over the new college. This power is, of course, but vaguely described in the word visitorial, but it is nevertheless, in fact, most substantial, and with the understanding which has been established by fifteen years of experience it is effectual and insures a close union in essential matters. In this view the vagueness of the term is, and was meant to be favorable to the growth of whatever further connection may hereafter be developed.

Some anxiety has been expressed by eager advocates of women's education because the university has not made a formal contract, nor specified in what way it will exercise its powers, nor enumerated the privileges it will give to women, nor even fixed the time for which it will abide by the new arrangement, which, on the contrary, is expressly made terminable at its pleasure. But the want of definite articles of agreement is by no means a ground of apprehension to those who know the history of the annex and appreciate how fully it is already a part of the university through adoption by the faculty, which is for this purpose the university. No one who understands university methods, and especially the character, traditions, and policy of Harvard College will be disturbed by the fear that she will abandon a work to which she has set her hand or allow it to languish. The very want of precision and limitation in the terms of the arrangement indicate a union, not a contract, and is an assurance of intimacy and identical interests in the one essential matter of education. The change from a private cooperative plan of individual professors to an officially determined connection with the university is a vital change for the annex and practically fixes it as a part of the university, whether in the present form or some other.

The question of university degree remained, and this was met in the only way now practicable. The graduates of the annex have always had a not unreasonable feeling of deprivation in that their thorough and systematic work, fulfilling the highest standard of college work in the country, was not marked by any degree or title, while the same work brought to men the distinction of a Harvard degree. The annex certificate did represent, to those who were well informed, the fact of education, but the symbol is also valuable, and is even of material value, for high employment as teachers is more readily offered to those who have a college degree.

The corporation of Harvard College, however, was not prepared to offer to women the university degree of bachelor of arts, and it must be admitted that there is reason for caution before taking a step so important and so irrevocable. Such a degree would probably at once attract a large number of women, and it is not clear how the scheme could stand a sudden accession of large numbers. To make anything like an impartial sharing of the resources of the university would cripple the present work for men even if no law or principle forbade such an application of the funds and property now devoted to the education of men alone. Nor is it clear that the opinion of the graduates and friends of the university is yet so settled as to justify this departure from the established constitution of the university.

In view of these and other considerations, the corporation of the university declared itself unwilling to offer its A. B. degree. It was, however, willing to give to the young women a formal certificate, establishing their position at even grade with the Harvard bachelor of arts by graduation from the college which Harvard University is to supervise. The degree, therefore, is to be that of the new college, but countersigned by the president of the university and bearing the university seal. Exactly what shall be the form of that degree has not been determined, but it is not likely to be less explicit than the certificate now used, as given above, in stating that the recipient has accomplished the full measure of undergraduate work which entitles a student of the university to its bachelor's degree. If experience of the new arrangement with the women's college shall hereafter justify any further recognition of its graduates the university is likely to be ready to advance along the path on which it has now entered.

The matter of graduate instruction for women has not been made the subject of any definite arrangement, for the reasons given above, namely, that this is now com-

plicated, for the university, with question of laboratory accommodation, and the readiness of individual professors to arrange classes at once for women. Such classes are now made up in special cases, and difficulties in this direction are sure to decrease with the adjustments which grow with experience, especially if money is furnished for a better provision of apparatus. It is expected that the opportunities for graduate work will be much extended under the care of the university, and to this extension the opinions of many members of the university faculty are known to be favorable.

The plan embodying the main features stated above was informally submitted by the president of the university to the faculty, and was heartily assented to by them, and this assent secured the continuance of that indispensable support upon which the annex has hitherto relied. It is this arrangement which, embodied in the votes of the society as given above, is now approved by both the governing boards of the university.

It now remains only to obtain an act of the legislature changing the name of the society, and giving it the power to confer degrees, and to enter into the proposed connection with the university. The society being already incorporated, no charter is sought. The act proposed does not fix any unalterable relations between the women's college and the university, but merely authorizes the former "to confer at any time upon the president and fellows of Harvard College such power of visitation, and of direction and control over its management, as the said corporation may deem it wise to confer and the said the president and fellows may consent to assume." This will leave it open for the university to adopt hereafter any arrangement it may choose, and to change the plan as experience may show to be desirable.

COEDUCATION AT THE UNIVERSITY OF TENNESSEE.

KNOXVILLE, TENN., *April 30, 1894.*

MY DEAR SIR: Replying to your communication of the 26th in regard to the working of coeducation in this university, allow me to say:

(1) It has been tried only one year, but so far as may be judged by that there is no occasion to regret its adoption.

(2) Fifty young women—not under 17 years of age—have been admitted, and both in quality and quantity of work they rank above any 50 of the male students of the same age and class.

(3) It is fair to say that I think the large majority of those who applied for entrance this (the first) year are, in spirit and purpose, if not in capacity, above the ordinary average that one could expect. They have seemed anxious to do nothing that would bring the plan into disrepute.

(4) No changes in courses were made for their benefit and no additional expense incurred by their admission beyond the fitting up of a suitable building for their occupancy during the day when not at lectures. They board in approved private families in the city.

(5) A prudent watchfulness is exercised to forestall any imprudence or indiscretion, but that is all. It is our policy not to keep a boy who has to be watched, and that policy will be emphasized in case of women.

(6) They have given no trouble in the discipline, and their general influence in class and university life has been salutary.

Very respectfully,

T. W. JORDAN,
Dean and Professor of Latin University of Tennessee.

Dr. W. T. HARRIS,
Commissioner of Education, Washington, D. C.

UNIVERSITIES AND COLLEGES FOR THE COLORED RACE.

There are twenty-five universities and colleges, located mainly in the Southern States, devoted to the education of young men and women of the colored race. These twenty-five institutions have grounds and buildings estimated at $3,054,433, and they have permanent productive funds to the amount of $757,446. The two universities in Atlanta, Ga., have property valued at half a million dollars, while the three in Nashville, Tenn., have property valued at considerably more than half a million, Fisk University alone having a valuation of $350,000. Lincoln University, Pennsylvania, has property valued at $185,000 and an endowment of $237,450.

The most salient point in connection with colored education in professional schools is the rapid increase in the number of students engaged in the study of medicine and law in the last few years. In theology the number has not increased of late years; in fact, there seems to have been a slight decrease. In 1886-'87 there were 933 theological students; in 1889-'90 there were 734; in 1891-'92 there were 577. In the law schools, however, the number has been increasing; 81 students in 1886-'87 and 119 in 1891-'92. But in the medical schools we find a still larger increase; 165 students in 1886-'87, 310 in 1889-'90, and 457 in 1891-'92. It is very probable that there will be an increase for some years in all of these lines, for, notwithstanding the occasional averment of moral obliquity in some of the clerical order, the devout will only recognize the greater need of earnest, consecrated men to proclaim the saving truth and to establish the people in the paths of rectitude, while the less punctilious will feel that there should be more of that charity which hopeth all things and is not easily

provoked, and all will be attracted by the opportunities of coming before the people and exercising the oratorical gifts which they so frequently possess. It is but natural to expect, too, that the thousands of colored people will furnish employment to many of their race both in healing the sick and in representing their claims in the courts, and so long as there shall be room for more in these pursuits the candidates will probably not be lacking.

For the last three years the number of students reported as engaged in collegiate studies has been about 800. The question may be asked, why is it there are not more collegiate students when there are twenty-five universities and colleges prepared to receive them? In the first place, a large number of colored boys and girls, especially those living in the rural regions, do not have the opportunity of finishing even the elementary studies with much success, on account of the brief term of three to five months in the public schools and the defective instruction imparted therein. This eliminates a very large number of possible candidates for higher education. In many of the schools for white children, when the public term expires, the school is continued without interruption, each pupil paying a small tuition fee; but heretofore the colored people have not been able to continue their schools in this way.

Again, in the Southern States it is comparatively easy for a young colored man of energy and a good secondary education to find employment which at once enables him to begin saving up something and to get a start in the world. When he once begins to accumulate means, the desire to increase the amount comes to him just as to others, and consequently he soon has plans formed in which further education is not considered, especially when he sees that it would take several years to secure the funds and finish the course. He naturally concludes to let well enough alone. As there are comparatively few colored parents able to bear the expense of sending their children through a college course, those who are qualified to begin higher studies fall in the number just mentioned and do not attend for the reasons there stated.

The work of the colored universities and colleges, therefore, is at present to a large extent, below the grade of a university, but they are now only laying the foundation of their future work. Many of their students who are grown young men and women are only engaged in secondary work, and they are entitled to commendation for that degree of progress. The colored boy in getting an education encounters many difficulties. The school which he first enters probably continues three or four months; the rest of the year he labors at whatever he finds to do, and if he fortunately gets a good place he probably keeps it for a year or two. Then he spends another short term in a school which probably scarcely deserves to be called a school—the teacher incompetent, no apparatus whatever, possibly not a single blackboard, and children of all ages and sizes crowded into a building seemingly constructed to avoid any financial loss when the cyclone shall have leveled it to the ground. After several years spent in this haphazard way of getting an education, he resolves to enter a college, but as his parents have little means, he has to work his way through. But all through the course and in after years he labors under difficulties on account of his defective elementary education. But notwithstanding the difficulties under which they labor, many young colored men manage to acquire a very valuable training.

"A law student at Shaw University helped to support a widowed mother and worked his way up, teaching a school of 80 scholars 4 miles in the country, walking both ways, and yet studying law and reciting at night, nearly a mile away from home. He was finally graduated with honor and admitted to the bar, sustaining decidedly the best examination in a class of 30, all the others white, mostly from the North Carolina State University, and he as black as you will often see, yet complimented without stint by his white competitors and by the chief justice himself."—[*American Missionary, June, 1893.*

While the controversy is going on as to whether the negro is capable of receiving the higher education, and while many reasons are being advanced why he is not, the colored man himself is saying nothing about it, but is going forward learning all he can and endeavoring to increase the number of object lessons with which the theorist must contend. The number of highly educated colored ministers, lawyers, doctors, and educators is small, indeed, as yet, and they are scattered over a wide expanse of territory, but each year sees the number increasing, for the very rarity of the highly educated colored man is best known by his own race, and hence when they see one of their number possessing talents so cultivated as to command the admiration of all, or when one of them is able to secure a position of high honor and distinction, it is observed by none more quickly than by the colored people themselves. One colored man in the House of Representatives of the U. S. Congress will excite a thousand hopes and aspirations in the breasts of his admiring friends, and for every one who is thus able to rise to distinction hundreds of others will enter the doors of some university or college resolved that if they shall not be able to reach the acme of their ambition, they will at least attain to the highest point their oppor-

tunities and diligence will permit them. The colored parent, too, will be stimulated to give his children the advantage of every educational facility possible, even though he recognizes that it will require great sacrifices on his part, for he feels that in so doing he will be assisting in the elevation of his race, something in which he takes a personal interest.

NORTHERN AID TO COLORED SCHOOLS.

The great work of educating the colored race is being carried on mainly by the public schools of the Southern States, supported by funds raised by public taxation and managed and controlled by public school officers. The work is too great to be attempted by any other agency, unless by the National Government, the field is too extensive, the officers too numerous, the cost too burdensome. Societies and churches may temporarily take hold of places neglected by public-school officers and show by their work what is needed, but they can not attempt the work legitimately belonging to the public schools. This aim is kept steadily in view by the societies which have been long engaged in helping the colored child lift itself up in the world and begin work on a higher plane.

But while the work as a whole can be carried on only by public taxation, it is being aided very substantially by the societies and churches in the Northern and Western States, which have had their missionary teachers engaged there since the first opportunity was offered them, even before the war had ended. Most of the aid given by these States goes through the regular channels of some organization, but there are quite a number of colored schools which depend entirely on appeals to individuals for help.

At the close of the war the different denominations began to vie with each other in the education of the freedmen, who had hitherto not been allowed in a schoolroom. Young men and women full of missionary spirit left home and friends to go into distant parts of the South to educate children, parents, and grandparents, for they were all in the same classes, and they began at the beginning. These teachers soon found that it required a missionary spirit indeed, for there was something of pathos as well as romance in the work. Now, scattered all over the South, at one place representing one denomination, at another place some other denomination or society, are to be found schools filled to overflowing with eager learners, taught generally by teachers selected for their competency and missionary zeal. These schools are not intended to antagonize the public schools. Generally they are of a higher grade than the public schools, and when not they serve as model schools and are carried on in a way to enable needy children to work out an education. Not only have such schools been established and maintained and help given to deserving pupils, but with almost every school a church has also been established to furnish religious instruction. But reference is intended to be made here to school work only.

The Freedmen's Aid Society of the Methodist Episcopal Church was one of the earliest to enter upon the work of colored education, and it is now one of the most important factors in the work. The extent of its effort among colored people in 1892-'93 is indicated by the following summary of institutions, teachers, students, and property: Schools, 23; teachers, 214; students, 5,396; property, $1,183,000. In addition to the regular teachers, 165 practice teachers were employed from the normal departments. Its expenditure for colored schools in 1892-'93, after deducting tuition fees paid by the pupils and the amount paid by the State of South Carolina to the agricultural school at Claflin University, was about $200,000.

Another very important factor in the work is the American Missionary Association, one of the pioneers in entering upon this work of education and one of the largest contributors up to the present time. The Daniel Hand fund, amounting to $1,000,894, was placed in the hands of this association by Mr. Hand himself, while still living, and the income (but the income only) is to be used in educating colored boys and girls in the recent slave States.

The John F. Slater fund is held by a board of trustees, of whom Dr. J. L. M. Curry is the general agent, and the income is distributed to various schools, but not necessarily to the same schools each year. It is intended mainly to supplement local funds and to stimulate local effort. The Peabody fund also aids very materially in this work.

The Board of Missions for Freedmen of the Presbyterian Church is taking an active part in the education of the colored race. During the year 1892-'93 it had 86 schools, 15 of them being boarding schools, 252 teachers, and 10,520 pupils. Biddle University, Charlotte, N. C., Scotia Seminary, and Mary Allen Seminary were among those supported by it. Schools have also been established by the Baptists, Lutherans, United Presbyterians, Catholics, Episcopalians, and Friends.

There is a wonderful contrast in the character of the schools established for colored children. Many of the schools, especially those in the remote rural regions, are as defective as one could imagine a school to be; but, on the other hand, most

of those established by the missionary societies, are better managed and have a better class of teachers. These teachers have generally been educated in the best Northern schools, and coming as they do from different States, they combine the best methods of different schools. Frequently, too, they have undertaken the work from philanthropic motives and are filled with aspirations not only to elevate the intellectual capacity of their pupils, but to implant in them high and ennobling principles, and by means of this training given at school to elevate the entire race. In some cases these teachers have refused much larger salaries, in order to continue what had become to them a labor of love; they preferred the satisfaction of helping to build up a race rather than to enter into the contest for pelf.

SCHOOLS CONDUCTED BY COLORED INSTRUCTORS.

That the institutions for the colored race are beginning to accomplish the purpose for which they were mainly founded, namely, that they might train up leaders for the colored people from their own race—preachers, teachers, doctors, lawyers, etc.—is shown by the fact that there are now some institutions of high grade and of growing popularity that are conducted entirely by colored instructors, and these are educating others who will be able to fill their places with equal if not greater success. While many schools are being conducted wholly or in part by colored teachers, a few conspicuous examples are given of what they sometimes accomplish.

Allen University, Columbia, S. C., was established in 1881 by the African Methodist Episcopal Church, and has been conducted solely by colored teachers. From the very first it has enjoyed great success, and during the year 1891-'92 there was an attendance of 465 students.

In Biddle University, Charlotte, N. C., all of the eleven instructors except one in the industrial department, are colored. This institution ranks among the very best in the land for colored education of high grade. Although it is a school for colored students and taught by colored teachers, it has some of its strongest friends among the white people who live in that part of the State, and who are therefore well acquainted with the work accomplished by it. Senator Zebulon B. Vance and Dr. Drury Lacy, lately president of Davidson College, North Carolina, have spoken of it as accomplishing great good for both the educational and religious welfare of the race. (Further notice of this school on page 869).

One of the most conspicuous results of colored enterprise and ability is the Tuskegee Normal and Industrial School, of Tuskegee, Ala. This institution is an achievement of Mr. Booker T. Washington, a graduate of the Hampton Normal Institute. Opened in 1881 with 1 teacher and 30 pupils, it attained such success that in 1892 there were 44 officers and teachers and over 600 students. It also owns property estimated at $150,000, upon which there is no incumbrance. Gen. S. C. Armstrong said of it: "I think it is the noblest and grandest work of any colored man in the land. What compares with it in genuine value and power for good? It is on the Hampton plan, combining labor and study, commands high respect from both races, flies no denominational flag, but is thoroughly and earnestly Christian; it is out of debt, well managed and organized." In Alabama Mr. Booker T. Washington is recognized by all as one of the leaders of the race, *facile princeps*. His efforts and influence are not confined to building up and sustaining the large institution which he has established. Several conventions of leading colored men have been held at Tuskegee, at his suggestion, to consider ways and means for the moral, educational, and financial elevation of the colored people in general.

INDUSTRIAL INSTRUCTION.

Most of the colored institutions bear a close resemblance to a large household which carries on the work of education, the cultivation of the farm, the building and repairing of houses, the raising of cattle, and in which the pupils are furnished an object lesson in the proper management and conduct of a household of which they form part, and can therefore continue afterwards when opportunity shall present itself.

Tougaloo University, Mississippi, for instance, is situated about half a mile from the Illinois Central Railroad, and 7 miles north of Jackson, the capital of the State. The grounds embrace about 500 acres of land, and furnish a temporary home for a family of about 200 persons, who have built the houses in which they live, who raise the large quantities of corn, wheat, potatoes, fruits, and vegetables necessary to supply their table, who raise their own cattle, milk their own cows, cook their own food, laundry their clothes, and, lastly, provide for their own instruction. In a word, they are, to a large extent, independent of the rest of the world. This method of training is the kind specially needed by them, for, on account of their meager circumstances, they are too little acquainted with model home and family life. Once

having felt and learned to appreciate its elevating influences, however, they have an ideal to which they ever afterwards aspire and without which they can never rest contented.

Moreover, the education they receive in these collective households will enable them to earn good wages, teach them how to use their earnings to the best advantage, and consequently they will in all probability have the opportunity of carrying out on a smaller scale their ideal home methods.

In fact, the desire to own a home is already quite common among the colored people, and that many of them are beginning to do so is shown by the great increase during the last decade in the amount of property which they own in Georgia. In that State there is kept a separate account of the assessed property of colored people. In 1882 the amount of assessed property held by colored people in Georgia was $6,589,876; in 1892, the amount was $14,869,575, an increase of more than 100 per cent.

In Claflin University, South Carolina, is to be found the same family life as that of Tougaloo University, but on a still larger scale.

Although specially adapted to the needs of the race, it is probable that this method of conducting an educational institution was not selected as being the most desirable, but rather because it was well recognized that in no other way could the attendance of a large number of students be expected. What would be regarded as a very moderate cost of education in most of the institutions for white students would have been beyond the reach of most colored students, but by the plan adopted at Claflin the expenses for board and tuition are reduced to $8.50 per month, and at Allen University to $5.50 per month. Quite frequently, too, part of these expenses is paid by manual work, either for the institution or for adjacent residents. It is by reason of this low cost of education that we find over 600 boys and girls attending Claflin University, and in fact that we find all of the colored schools filled to overflowing. Many of the students begin a school year with about as much means as would be thought sufficient for a month or two, but they manage to pull along the entire year, and after three more months of work, instead of that much time spent in idleness, they are again found on the grounds of the institution, happy on account of their growing independence and ability. They have no fear of not being able to find some work to do, for they know how to work and above all are willing to work, and when one possesses these two qualifications he will rarely lack employment.

INSTITUTIONS FOR THE COLORED RACE.

* In 1889-'90.

Lincoln University, Pa.—Rev. W. P. White, in Church at Home and Abroad says: Of institutions making the advanced education of colored youth and their training as teachers and preachers to their own people a chief end and aim, one of the foremost, as well as the earliest established, is Lincoln University.

It is located in eastern Pennsylvania, on the line of the Philadelphia and Baltimore Central Railroad, 46 miles from Philadelphia and 61 miles from Baltimore. No better physical or geographical location could be found.

It is near enough to the border line of the South to be easily accessible to the great majority of those needing and desiring its benefits, and yet far enough from the associations and influence to which they have all their lives been subjected.

It was founded in 1854, six years before the war which gave emancipation to the colored race. During this period it had to contend with prejudice strong and bitter. The negro's right to be a man and to receive the blessings which Christ offers freely to every race was not then so universally admitted.

Previous to 1864 it was known as Ashmun Institute, but in that year an amended charter, with additional privileges, was obtained for it, and a new name was assumed, one that will be forever linked with the freedom of the negro and with the most eventful crisis of American history.

Since then the institution has grown largely in resources, in influence, and in adaptability to the end for which it was established. The results of its work will compare favorably with those of any institution of like age in the history of our country. Five hundred young men have been sent from the preparatory department and from the lower classes of the collegiate department, many of whom are engaged in important positions as teachers in the Southern States.

Nearly 400 have been graduated from the collegiate department after a course of instruction extending through four and in many cases seven years. Most of these graduates are engaged in professional and educational labors in the South.

About 200 have graduated in the theological department and received ordination as ministers in different evangelical denominations. Thirteen have gone to Africa as missionaries of the cross.

The institution has so commended itself to noble men and women of wealth during the past twenty-five years as to lead them to place it upon a firm financial basis, thus securing to it a large degree of success in its work.

Mr. Fayerwether, in including it, a few years since, with other representative institutions of the land, for a share in his munificent bequest to the extent of $100,000, testified in the most striking way to its importance and usefulness.

The campus or grounds of the university consist of 78 acres, on which are four dormitories for students; Livingston Hall, for commencement assemblies, capable of seating 1,000 persons; University Hall, a four-story building, containing eighteen rooms, designed largely for recitation and class purposes, carefully constructed and conveniently arranged, and surmounted by a revolving observatory for the reception of the telescope recently presented to the university; and the Mary Dod Brown Memorial Chapel, containing an audience room for Sabbath services, seating 400 persons; a prayer hall for daily use, communicating with the chapel by sliding frames, and two class-rooms similarly connected with the prayer hall.

The nine professorships, including the president's chair, are all endowed and filled by able and efficient scholars and teachers.

For twenty-seven years Rev. Isaac N. Rendall, D. D., has been its president, and to his eminent fitness for the position is owing largely its success and present proud position among institutions of its kind.

The connection with it in earlier years, as instructors, of such men as Revs. E. E. Adams, E. R. Bower, Thomas W. Cattell, and Casper R. Gregory served to give it its wide reputation.

Each successive year of its history has brought to it an increased number of students, until now 240 crowd its halls and tax to the utmost its measure of accommodation and means for their support. These 240 students represent twenty-two States of the Union, the West Indies, South America, and Africa. Among them are seven sons of alumni. Three-fourths of them at least are professing Christians. Perhaps one-half of them will study for the ministry.

In their eager desire for knowledge and in their aptness of reception of it, in their application to study and their readiness in recitation; in their observance of the rules of the institution and in the conduct of their devotional meetings, little difference is observed between them and those of white institutions.

From the Howard Quarterly, January, 1893.—The fact that the 141 colored students in white colleges keep up with their classes without difficulty, and in many cases have been the recipients of special honors for proficiency in their studies, shows that they can pursue these higher branches with a success equal to that of their white classmates. Many individual examples may be cited besides that of the colored class orator of Harvard two years ago. The last one is from the Chicago University, where a colored girl led the entire entrance class in the December examinations. and

received a very substantial reward in a scholarship which will pay all expenses of the four years' course. This young lady prepared for college at Howard University.

Private schools should not antagonize public schools.—J. L. M. Curry: In some of the towns and cities there is, possibly, an unwise multiplication of denominational or independent schools. Christian denominations are rivals in their establishment, in getting the largest number of pupils, and in making the most attractive exhibition. It seems to be a weakness and an error common to all to seek to catalogue as many names as possible. The aggregate means not the habitual and average attendance, but all who, for any time, one day or several months, have matriculated. This militates against the usefulness and popularity of the free schools. In so far as these institutions, not under State control, impair the efficiency of, or divert attendance from, the public schools, they are mischievous, for the great mass of children, white and black, must, more in the future than at present, depend almost exclusively upon the State schools for the common branches of education. These schools, permanent, not subject to caprice or varying seasons, incorporated into the body politic, into the organic law, must be the chief factor in the education of the people. At great sacrifices, the Southern States have provided means of education, constantly improving and enlarging, for the colored children. The large number at school, over 1,200,000, is the proof that no obstacles are thrown in the way of their getting such rudiments as the common schools impart, and of occasionally rising to higher grades. An educational charity would sadly fail of its purpose if any, the least impediment were placed in the path of free shools.

George R. Smith College, Sedalia, Mo.—The cornerstone of George R. Smith College was laid June 1, 1893, Rev. J. C. Hartzell, of the Christian Educator, being master of ceremonies. This institution dates its inception from the gift of 25 acres of land, valued at $25,000, at Sedalia. Mo., by two daughters of Gen. George R. Smith. The building, when completed and furnished, it is estimated, will cost $35,000. The superintendent of construction, Mr. La Port, will take a lively interest in the work, not only from his connection with it, but on account of his own dramatic history. Born a slave, he ran away at 12, but afterwards worked fourteen years to obtain the money necessary to secure his freedom. He is now worth $75,000, and supports his aged mother and the widow of the master from whom he purchased his freedom.

Of the amount required for building, the conferences of Missouri assumed $14,000, of which amount $3,000 was paid at the time the cornerstone was laid. Rev. P. A. Cool was appointed president of the institution, and will devote his attention to raising funds until the building is completed.

American Missionary, December, 1892—We have one woman 48 years old, mother of 9 children, who walks daily to and from her house, 3 miles distant. She brings with her 2 daughters and an adopted son, but leads them all in her classes. This woman was a slave before the war and having brought up a family since, this is her first chance to attend school.

The Tribune.—It is an interesting and significant circumstance that the highest honor at Boston University this year has been awarded to a colored man, Thomas Nelson Baker, who was born a slave in Virginia in 1860. He has paid his own college expenses by teaching, and the disadvantages under which he has labored account for the fact that his age is considerably greater than that of the average college graduate. He was fond of books from his boyhood, and was bound to get an education. What he has accomplished should be an inspiration to others of negro blood.

Straight University, New Orleans.—On the night of November 30, 1891, the university building of Straight University, New Orleans, was destroyed by fire, together with the library of 2,500 volumes, printing press, chemical and philosophical apparatus. A new building, however, was soon planned and has been finished. It is three stories high, of a pleasing style of architecture, and contains on the first floor the chapel (seating 350 persons), four recitation rooms, a large college room, music room, libraries and offices of the president and treasurer; on the second floor are the rooms set apart for the chemical department; and on the third floor are dormitories for theological students and their reading room.

Biddle University, Charlotte, N. C.—Rev. E. P. Cowan: The present faculty of 11 men, all of whom are colored but one, are not only engaged in attending to the duties of their respective places as professors, but they are also engaged in demonstrating before the world the proposition that educated colored men are capable of successfully carrying on the education of other colored men.

The proposition to many is so simple that it seems hardly to need demonstration; yet some have doubted.

As not all educated white men are capable of successfully administering the affairs of large institutions designed for the education of their kind, so it is not claimed that every educated colored man is capable of becoming a successful educator; but it is claimed that out of the product of our educational work of the last twenty-eight years more than enough selected men can be found perfectly competent to do

the work to be done even at so large and important an educational center as Biddle University.

The best argument in favor of Biddle University, as at present organized, is the good condition in which it now is, and the good work that is now being done. This can be seen by any one who will take the time and trouble to visit the place and examine for himself. The number of students has largely increased, and the graduating class will be the largest that has ever gone out from the college since it obtained its present charter.

The order and decorum of the students is remarkable. The rules are stringent, and are obeyed. The buildings are well kept, as far as the age and dilapidated condition of some of them will allow.

The industrial department is better organized and more efficient than it ever was before in the history of the institution. Prof. Hunt, a graduate of Atlanta University, is a practical carpenter. Under his direction the students have just finished building a dwelling house for one of the professors. * * *

Look into the shoe shop and you find a dozen young men (the room will hold no more) who, an hour before, were reading Greek and Latin; now they are sitting on cobbler's benches and are driving wooden pegs. In the next room a dozen more are setting type, while two others are turning a large printing press, and a third man is "feeding" the machine.

In all these industrial departments the students spend one hour a day that is regarded as practice, and this is set down to "tuition." Later in the day the same student gives an hour to some industrial work, which is regarded as "service." For this he is paid, or rather he is allowed so much to his credit on his individual account with the institution. If a young man receives pecuniary aid, as many do, he does not get this help for nothing. He must render service, either in Prof. Hunt's industrial department or Prof. Carson's home department, of which service an accurate account is kept and the worth of his work is charged up to his credit. In this way the student does indeed get aid; but he also is made to feel that he is, at least partially, working his way. This arrangement is admirable, and is all that could be desired. * * *

The institution is now running up to its utmost capacity as regards numbers. The enrollment so far this year, 1893, is 236. The boys are stowed away in their cheap dormitories, in many cases eight in a room. Two students sleep in the engine room and over thirty in the main building, which was never intended for dormitory purposes. If the university only had the necessary accommodations and scholarships, the roll would easily run up to 500.

Higher education of the negro race.—Dr. F. G. Woodworth: For the sake of the race as well as for their own sakes, those individuals who have the capacity should have opportunity for and be urged to seek the so-called higher education, and the highest and broadest culture they can obtain.

There will be constant and increasing need of leaders for the negro race, men who will be able with wise forethought and ripe judgment to guide the people on an upward way. The great uplifters of the race must be from the race. They must be men who can be in wholly sympathetic touch with those whom they would benefit, a sympathetic touch found only in kinship, understanding their needs fully, feeling their heart-beats, the stirring of their aspirations, able to touch their natures, as we can not touch them who are cast in the Saxon mold. If the white race, with its advantages and its inheritances of culture, needs the stimulus of men of high education, how much more the colored people?

Perhaps I may be met by the skepticism whether the negro can take on this higher culture. This rests on the assumption that the negro is essentially inferior. It is an assumption. No *apriori* assumption can determine the question either way. It must be settled by facts as time shall bring them to light. To-day the evidence of facts points in the direction that some of the negro race can and do take on the higher education, and make valuable use of it. Each year sees additions made to the small army of cultured and successful doctors, lawyers, teachers, and preachers.

CHAPTER XXVIII.

REPORT ON EDUCATION IN ALASKA.

DEPARTMENT OF THE INTERIOR,
BUREAU OF EDUCATION, ALASKA DIVISION,
Washington, D. C., June 30, 1892.

SIR: I have the honor to submit the following annual report of the general agent of education for Alaska for the year ending June 30, 1892.

NUMBER AND GENERAL CONDITION OF THE SCHOOLS OF ALASKA.

There is in Alaska a school population of from 8,000 to 10,000. Of these, 1,934 were enrolled in the 31 schools in operation during the year closing June 30, 1892. Sixteen day schools, with an enrollment of 798 pupils, were supported entirely by the Government at an expense of $20,020, and fifteen contract schools, with an enrollment of 1,136, were supported jointly by the Government and the missionary societies of the Presbyterian, Moravian, Episcopal, Methodist, Congregational, Lutheran, and Roman Catholic churches. Of the pupils in the contract schools, 788 were day pupils and 348 industrial pupils. These latter were clothed, housed, fed and taught.

The boys were taught shoemaking, housebuilding, furniture-making, coopering, baking, gardening, and the care of cattle; the girls were taught cooking, baking, washing, ironing, sewing, dressmaking, and housekeeping.

Toward the support of these contract schools the Government contributed $29,980, and the missionary societies $68,211.81.

UNALASKA DISTRICT.

Point Barrow contract school.—Presbyterian; population, Eskimo; L. M. Stevenson, teacher. The school was opened October 6, 1892. There were but few natives at the time in the village, the majority of them still being absent, hunting on the land and fishing in the waters, to secure a supply of winter food. This kept them away until the dark days of December, and the scarcity of food was such that some remained away the entire winter, coming in only to bring supplies of food to their relatives that remained in the village. The caribou had migrated further than usual into the interior, and only scattered ones were seen. Again, the native prejudices against an education and the influence of their sorcerers kept some of the children from school, so only a few attended the earlier portion of the year. As the winter advanced, however, more came in. The progress of those that did attend was better than that of the previous year. They seemed to have remembered what they had learned, and started readily upon a review covering what had been gone over, the review being thorough and complete, before any new matter was presented, except the short texts and phrases which were kept constantly on the blackboard to attract their attention. This cultivation of memory was a somewhat difficult task and did not succeed as well as was desired. One of the characteristics of the northern Eskimo is the idea that "to-morrow will be another day," and they were unaccustomed to commit anything to memory for future use. They seemed, however, to have a great desire to know the English language, and studied very diligently in the school room, but failed to use what they had learned, outside; although sometimes, when the children were on the playground, with none of the older natives around, they used the English which they had learned in school quite freely.

One of the great obstacles to the school work, and the civilization and christianization of these natives, is the liquor which is smuggled in by a few of the whalers.

The larger portion of the whaling fleet is opposed to the introduction of liquors among the native people. A few of the captains, however, still believe in it, and, as far as they can, avoid the vigilant watch of the revenue cutter, and deal out a bottle here and there to the natives for the purpose of inducing trade or something worse. Also, sometimes, when the commanding officer of the whaler is opposed to the introduction of liquor, some of the men on his ship will smuggle a few bottles along, which are dealt out to the natives on the sly. In this way a sufficiency of liquor gets into the country to demoralize a number of the natives, and drunkenness commences with the arrival of the whaling fleet and lasts until it leaves the country in the fall.

Another inconvenience and difficulty has arisen from the fact that no mission buildings have yet been erected, and the school has been dependent upon the courtesy of Capt. Healy, freely extended, for the use of a room in the refuge station. In 1891 the Board of Missions of the Presbyterian Church, who have a contract with the Government for the renting of this school, chartered a schooner in San Francisco and sent up a load of lumber and building material. The vessel reached within 70 miles of Point Barrow, when it was stopped by the presence of the ice-pack of the Arctic, and could go no further. Under the circumstances the schooner returned to Bering Straits, and the lumber was landed at that station. The following year the school at Cape Prince of Wales failed to secure a needed supply of lumber from San Francisco, and used the lumber that was intended for Point Barrow, necessitating the Point Barrow station occupying the refuge station another year.

Point Hope contract school.—Episcopalian; population, Eskimo, John B. Driggs, M. D., teacher. The population of Point Hope (Tigara) was slightly increased this season over last from families arriving from other tribes. Whenever a strange family came into the village it at once enrolled its children in the school. The daily average for the year was 28. It would have been much larger, but for irregular attendance caused by whole families going off on hunting trips and remaining from one week to a month at a time.

During the year two new classes were introduced into the school, one in which the teacher required the pupils to repeat short sentences in the native language and then translate them into the English language orally, or write them out on their slates. The second class was one in which the teacher repeated short English sentences and had the pupils translate them into their own language. The majority of the children manifested considerable advancement in their studies.

Cape Prince of Wales contract school.—Congregational; population, Eskimo; W. T. Lopp, teacher. Mr. Thornton, the associate teacher at this station, having returned to the States in the fall of 1891, Mr. Lopp, who remained behind, was the only English speaking person left in a large region of country. The lonesomeness of such a condition can not be appreciated by anyone who has not been similarly situated. Toward spring a native family, who had been off some 300 miles to a trading post, returned, bringing with them a dog that would obey commands given in the English language. The loneliness had been so great that Mr. Lopp would visit that dog every day for the companionship of some animal that had once heard the English language.

The school year was a very prosperous one. The average daily attendance of pupils was 106; including teachers, 118. Many of the children mastered the alphabet, learned to spell and pronounce simple English words, read in the first reader, write a neat and readable hand, and sing gospel and patriotic songs. They also became familiar with several hundred English words, and learned the necessity of greater cleanliness in their habits. A few of the larger boys and girls were taught to make clothing of hair seal skins, after American patterns. Lead pencils, paper, pictures, hard bread, combs, and soap were given as prizes for punctuality and diligence. On a few occasions it became necessary to punish pupils by excluding them from the privileges of the school for a few days. Visitors to the school came from 50 to 300 miles around. Last season a school bell was received, which greatly delighted the people. However, in October, the teacher was waited upon by one of the leading sorcerers, who requested him not to ring it, as the spirits had informed him that the noise of the bell would prevent the people from successfully hunting foxes and seals. But as white foxes were more abundant than ever the ringing of the bell did not seem to have any bad effect.

Owing to the fear which the chiefs of the village held towards Capt. Healy, of the *Bear*, the village was very free from whisky or drunkenness during the year. They expressed a great deal of surprise at the character of the teacher, who neither traded nor hunted, and at the time was unmarried. He was a puzzle to them. They said: "Too poor to trade, too stingy to marry, and too effeminate to hunt."

The winter was a cold one. The mean temperature from October to May was 5.6° and the maximum 40°; minimum, —30°. In February and March Bering Straits were blocked up with smooth fields of ice from the North, so that 5 of the people made a trip by dog sleds across to Siberia for tobacco.

Ten Eskimo police were appointed by Capt. Healy, of the *Bear*, to assist the teacher and take charge of the drunken natives who might be inclined to be disorderly. These native police worked with great efficiency and were found exceedingly useful in preserving order.

Unalalaklik contract school.—Swedish Evangelical; population, Eskimo; Axel E. Karlson, teacher. No report.

Anvik contract school.—Christ Church Mission; Protestant Episcopal; population, Indians; John W. Chapman, teacher. School was held from November 9, 1891, to April 15, 1892. The hours were from 9 to 3, with an hour's intermission at noon, when the day scholars were furnished with a simple meal. The average daily attendance for the year was 24.3. The teacher spent an hour and a half each day in oral training, at which the entire school would be required to learn the meaning and use of various lists of words, e. g., parts of the body, occupations in the States, geographical names, the comparison of adjectives, the conjugation of verbs, etc., as well as to construct sentences on given subjects, and read rapidly off hand. This seemed to have a stimulating effect upon the pupils. The school was divided into three classes, one of which went through the reader twice; the second, once and partially again on review, and the third class went half way through the first reader during the year. In arithmetic there were daily drills on the multiplication table and in combinations of numbers, adding by groups, etc. In geography the pupils were made familiar with the grand divisions of land and water, and with some of the more prominent natural features in the continent, with the political divisions in North America, and several of the groups of States and their typical products and occupations. The attendance was larger and more steady than the previous year.

A boarding school for boys was established and maintained, with an average of nine pupils.

Kosoriffsky contract school.—Holy Cross Mission; Roman Catholic; population, Eskimo and Indians; teachers, Sisters of St. Ann. At this station is a large boarding or home school in care of the Sisters of St. Ann, which was begun in August, 1888. The attendance during the year has been 75 and the progress of the pupils good. This progress was largely due to the effect of the pupils being separated from their parents and being under the influence of their teachers.

Besides a good English education, the girls were taught washing, ironing, sewing, and cooking. The boys were taught carpentry, blacksmithing, and gardening. During the long summer vacation 6 of them found employment on the river steamer as firemen and pilots.

As in all such schools, English was the only language allowed to be spoken in or out of the schoolroom. At the same place and time, and by the same sisters, there was conducted a day school with an enrollment of 40 scholars. These, however, did not progress as much in their studies as did their friends in the boarding school, as they were less under the influence of the teachers and irregular in their attendance, the necessity of securing food requiring them to change their location and be absent from home a considerable portion of the year.

Nulato contract school.—Roman Catholic; population, Indians; teacher, ———. A school of 20 pupils was kept from October 1, 1891, to July 1, 1892. No report.

Cape Vancouver contract school.—Roman Catholic; population, Eskimo; teacher, ———; enrollment, 20 pupils. No report.

Bethel contract school.—Moravian; population, Eskimo; teacher, John H. Kilbuck. School was kept for two hundred days; attendance, 34 boarding pupils. Each pupil is provided, at the expense of the school, with two suits of clothing, a fur "parka," a fur cap, a pair of seal-skin mittens lined with wool, and from two to three pairs of fur boots, per year.

The diet at the school table consists of dried salmon, frozen fish and game, bread, tea, sugar, beans, and salted salmon. In the spring the boys are allowed to go to the mountains and trap for fur, which gives them experience and also helps them earn a portion of their living.

At a later point in this report is included an interesting account sent by Mrs. Kilbuck, concerning Shamanism and sorcery in this valley.

Carmel contract school.—Moravian; population, Eskimo; teacher, F. E. Wolff. The school was kept from August 19, 1891, to June 7, 1892, with an average daily attendance of 18 boarding pupils.

Outside of the school hours the pupils were taught in the various industries suited to their position.

Much difficulty is found in keeping the pupils regularly under the influence of the school, as on one pretext after another the parents, not recognizing the value of regularity in school work, are disposed to take them off on fishing and hunting expeditions.

Several families came from distant sections to Carmel, that they might have the advantage of the school for their children.

Unalaska contract school.—Methodist; population, Aleuts; John A. Tuck, teacher; enrollment, 35. This place was selected by the missionary society of the Methodist Episcopal Church as the center of their church operations in Alaska, on June 28, 1883. Owing to a combination of circumstances, work was not commenced until the summer of 1889, when Mr. and Mrs. John A. Tuck were sent out to establish a school and mission home.

In 1890 the home was commenced by the bringing of 2 orphan waifs, girls, from the island of Attou, 1,000 miles west of Unalaska. The teachers were in a small one and one-half story cottage (half of which was used as a schoolroom), and were unprepared to receive any children into their family. But under the circumstances the waifs had to be received, whether convenient or not. Other girls, finding that 2 had actually been received, also came and refused to be driven away, and some weeks later Capt. M. A. Healy, commanding the U. S. S. *Bear*, brought down 6 orphan girls from the Seal Islands. Thus the school has grown and grown until 26 girls have been received.

The character and efficiency of the school can be judged by the following letter, received by the general agent from Capt. M. A. Healy:

REVENUE MARINE STEAMER BEAR,
Port of Unalaska, Alaska, November 9, 1892.

DEAR SIR: I have brought 6 girls from the Seal Islands to the Jesse Lee School; two years ago I brought down a like number. I am constrained by this part I have had in providing scholars for the school to give you my views of its character and accomplishments, with the hope that they excite interest in its behalf among its founders and supporters.

In all my experience in the country I have seen nothing that has rendered so much good to the people. From its situation, it has tributary to it this whole western end of the Territory where there are numbers of children and poor waifs, many the offspring of white fathers, growing up without the care of homes or the education and training of Christian parents.

Prof. and Mrs. Tuck have labored zealously and well to teach the scholars the necessities and requirements of decent living, and have trained them to become good housekeepers and proper wives and mothers. But they are cramped by the means and accomodations at hand. The school is already crowded to its utmost capacity, and can not take many whom it would be a mercy to give its protection, and who could be received with a suitable building and support.

I am sure the ladies of the Methodist society, could they understand the conditions and field of the school and how well it is conducted, would become interested in its behalf and provide it with better facilities with which to continue and enlarge its work for the elevation of these poor, neglected members of their sex.

I can not be accused of bias, for I am of an entirely different religious belief. Prof. and Mrs. Tuck know nothing of my writing. I am prompted by my interest in the country and the improvement of its people, and can not remain blind to good to humanity by whomever performed.

Sincerely yours,

M. A. HEALY,
Captain U. S. Revenue Marine.

Rev. SHELDON JACKSON,
Bureau of Education, Washington, D. C.

Sitka contract school.—Presbyterian. In the sping of 1885, 35 picked young men, between the ages of 16 and 25 years, were taken from Mr. Duncan's colony at Metlakahtla into the industrial training school at Sitka. After a period of four years 22 have left the school. Out of the 35, in addition to the ordinary studies of the schoolroom, 21 have learned to speak and read the English language; 21 have become good musicians and singers; 5 have learned to play on the cabinet organ; 9 have become members of the school brass band; 13 of the 35 were tobacco chewers and smokers before entering school, but after entering the school none of the others learned the habit; 7 learned the shoemaker's trade; 8 became carpenters; 4, blacksmiths; 2, coopers; 2, steamboat engineers; 4, house painters; 1, printer; 1, photographer; 6 had a training in a sawmill; and 3 became tailors.

Metlakahtla contract school.—This model settlement under the fostering care of Mr. William Duncan, the veteran missionary, continues to flourish. There are now about 100 neat frame houses in the village; the output of the salmon cannery last season was about 6,000 cases; it is the intention to increase its capacity to at least 20,000 cases. The other principal industries are a saw and planing mill which furnish all the lumber needed in the vicinity. Of Metlakahtla one of the tourists writes:

"Metlakahtla is truly the full realization of the missionaries' dream of aboriginal restoration. The church is architecturally pretentious and can seat 1,200 persons. It has a belfry and spire, vestibule, gallery across the front, groined arches and pulpit carved by hand, organ and choir, Brussels carpet in the aisles, stained glass windows, and all the appointments and embellishments of a first-class sanctuary; and it is wholly native handiwork. The dwelling houses are neat and attractive. They have inclosed flower gardens and macadamized sidewalks 10 feet wide along the entire street. The women weave cloth for garments, and the people dress tastefully in modern garb."

PUBLIC SCHOOLS.

KADIAK DISTRICT.

Kadiak.—C. C. Solter, teacher; enrollment, 69; population, Russian Creoles. Mr. Solter writes: "I opened school on the 8th of September. The number enrolled the first day was 27. The appearance of the children impressed me favorably. All came neatly dressed and clean; their faces showed signs of intelligence and they very soon showed their desire to learn. Most of the pupils are anxious to be on time in the morning, and some frequently went without their breakfast rather than be tardy. On the whole the school has made as rapid progress as could be expected. All that were regular in attendance have done well, while some have done exceedingly well. The deportment of my pupils has been such as to deserve commendation. I have never seen a class of better behaved children than I have in my school, and consequently the government of the same has not been a very difficult task. We had an entertainment at the close of school, which was quite a success. The visitors enjoyed the exercises very much, especially the singing, and were loud in their praises. The children take the greatest delight in singing, and as I have secured the use of an organ for next winter, a lively time is expected. I am studying the Russian language and shall soon be able to converse with the parents in their own tongue."

Afognak.—Mrs. C. M. Colwell, teacher; enrollment, 35; population, Russian Creoles. The prevalence of an epidemic during the early part of the year interfered greatly with the attendance upon school. There is a great deal of poverty in the district in which Afognak is situated, and the teacher in the kindness of her heart frequently supplied her pupils with material as well as intellectual food. She writes that here, as in all the other schools in Alaska, the children are bright and anxious to learn.

Unga.—O. R. McKinney, teacher; enrollment, 33; population, Russian Creoles. Mr. McKinney writes: "I was greatly encouraged by the personal appearance of the pupils and by the interest they took in their studies after I had started them in their work. It took me some time to get them to talk to me or even to speak English at all, although I knew that some of them could speak English quite well. I overcame this by degrees, however, and then forbade them to speak either in Russian or Aleut. The result of this is that they now talk to each other in English instead of Russian. They have advanced much more rapidly than I expected."

SITKA DISTRICT.

Juneau No. 1.—Lilly O. Reichling, teacher; enrollment, 26; population, Americans. Owing to the fact that a number of parents whose children had attended school moved away from the town during the year, the number of pupils enrolled was slightly smaller than during the previous year. However, the seating capacity of the present school house is severely taxed, but the narrow limits of the Congressional appropriation made it impossible to erect a larger building.

Juneau No. 2.—Mrs. W. S. Adams, teacher; enrollment, 75; population, Thlingets. Mrs. Adams is enthusiastic in her commendation of the aptitude of the native children. She writes: "The year has been a profitable one, and the influence of education is plainly discernible in the intelligent faces of the little brown children. We have a special day set apart for visitors, and those who come express surprise and admiration at the intelligence displayed by our pupils. The children have formed themselves into a society, elect their own officers, conduct their own meetings, and do it in a manner that astonishes people who visit the school."

Douglas No. 1.—Mrs. A. M. Clark, teacher; enrollment, 25; population, American. The Treadwell gold mine, the largest gold mine in Alaska, is situated upon Douglas Island, and this school is attended by the children of the miners employed there. Mrs. Clark displayed great energy in interesting and advancing the pupils under her care. During the year a literary entertainment was held, the proceeds of which were used in purchasing an organ for the use of the school.

Douglas No. 2.—Miss Millie Mohler, teacher; enrollment, 24; population, Thlingets. The majority of the children in regular attendance upon this school are inmates of the home maintained upon Douglas Island by the Friends' Mission. Miss Mohler writes: "In addition to other studies I have taught sewing to boys and girls alike. They pieced and quilted a patchwork quilt that would have done credit to our grandmothers, besides mending clothes and working in letters and cardboard."

Killisnoo.—E. M. Calvin, teacher; enrollment, 33; population, Thlingets and Russian Creoles.

Sitka No. 1.—Miss Cassia Patton, teacher; enrollment, 59; population, Americans and Russian Creoles. This school is attended by the children of the Government officials at Sitka, and the teacher being one of the most experienced and efficient in the Territory, the school is one of the most satisfactory in Alaska.

Sitka No. 2.—Mrs. Lena Vanderbilt, teacher; enrollment, 54; population, Thlingets. Here, as elsewhere in the Territory, irregularity in attendance was the greatest drawback to progress. The Thlingets are a sociable people. During the spring the natives visit their friends in the neighboring settlements, and at that season the beautiful waters of the magnificent fjords are covered with canoes carrying whole villages of natives—men, women, and children, on social pleasures bent. Later in the season hunting and fishing expeditions are in order. Carelessness as to prompt attendance is also a great discouragement to the teacher. Mrs. Vanderbilt writes: "While many of the natives have clocks in their houses, few of them are ever wound up, and when they are a very small number keep anything like the correct time. The increase in attendance during the winter was due to a great extent to the exertions of the local school committee, who visited the native villages from time to time in the interests of the schools.

"The natural intelligence of the native children, the general interest they show while in school, and the advancement many of them have made are all matters of encouragement to the teacher. Some have advanced far enough to appreciate the value of their studies, and I expect that gradually the influence of their advancement upon the other children who do not attend school will be very beneficial.

"I desire to note the uniformly good behavior of the pupils while in the school room. They seldom require reproof or correction; they are generally attentive and give me no trouble whatever."

Wrangell.—Miss E. Tolman, teacher; enrollment, 49; population, Thlingets. Miss Tolman writes: "When I entered upon my duties my hopes for the rapid advancement of the class before me were not very bright. Perhaps it was because I realized the extent of the undertaking that the results of my efforts have surpassed my brightest expectations. Be that as it may, my opinion of the brain power of the natives of Alaska has materially changed since I have become acquainted with it. Those of my class who have mastered the art of how to study have done remarkably well. Not only have they done well in their regular lessons from books, but they manifest great interest in various subjects that I introduce as a change."

Jackson.—Mrs. Clara G. Gould, teacher; enrollment, 100; population, Hydah. This school is the most isolated in southeast Alaska. During the seven years of its existence it has been under the charge of Mrs. McLeod, who thoroughly understands the dispositions of the natives, and she has succeeded wonderfully well in training and elevating the younger natives at Jackson.

Haines.—Rev. W. W. Warne, teacher; enrollment, 89; population, Thlingets. Mr. Warne writes: "The school has made better progress than I could have expected. Indeed, I feel quite delighted with some of the results. Some of my scholars have certainly made excellent progress. Those who commenced last fall did not know the alphabet, and by the end of the term were well along in the second reader. Everybody seems friendly and glad to have the school."

MISSION SCHOOLS OF THE CHURCH OF ENGLAND.

Rev. T. H. Canham, who for the past year kept a good school at the mouth of the Tanana, has this fall removed several hundred miles up the river to Fort Selkirk, where he intends opening a new school.

The school at Buxton will probably be conducted by Bishop Bompas, assisted by Dr. Toty.

THE KILLING OF CHARLES H. EDWARDS AND THE OUTRAGE UPON J. E. CONNETT.

In August, 1891, a schoolhouse was built and a school established at Kake village, an isolated settlement on Kupreanoff Island, about 100 miles south of Douglas Island, in a wild region quite beyond the influences of civilization. The school was given in charge of Mr. Charles H. Edwards, who had been very successful as teacher of the native school at Douglas. In his new field he was 50 miles from the nearest white man. Among the supplies furnished to Mr. Edwards were an organ and a stereopticon, and he soon succeeded in attracting the natives. In a short time the small schoolhouse was filled to its utmost capacity, and it became necessary to divide the school into three sections. In the morning the small children came and kindergarten work occupied their attention; in the afternoon reading and writing were taught to the young people, and in the evening a session was held at which no books were used, the efforts of the teacher being directed to giving his pupils practice in conversing in English.

It was not long before troubles came. Whisky found its way into the village. In one of his letters Mr. Edwards writes:

"Yes; I am lonely. Not a white face have I seen since our steamer left us. Two nights ago a canoe brought in quite an amount of whisky. One chief and all his retinue were gloriously drunk. All night long they kept up an infernal hammering

on an Indian drum, and the maudlin voices of men and women mingled in savage songs. I could not sleep. Next morning I went around to see what was the matter, and such a sight as met my eyes! Half nude human beings in all attitudes, their staring, intoxicated eyes reminding one of an insane asylum. The only thing you can do with a drunken man is to let him sober up. No impression made upon him is lasting. So I let them finish their revel, as they could get no drunker. Since they have sobered up they are ashamed to speak to me. I am becoming an ultra whisky hater."

The account of the final tragedy and subsequent occurrences is best given in the words of the examiner who, under instructions of the Department of Justice, investigated the matter:

"Toward the evening of January 10, 1892, a sloop with Malcolm Campbell and Emery Elliott on board came into the harbor about 3 miles from the Indian village, and commenced trading whisky to the Indians. What Mr. Edwards knew concerning this illicit traffic we shall never know; suffice it to say that an Indian named Squanish purchased $5.50 of whisky from them, which, when Mr. Edwards found out, he poured into the bay. They offered his interpreter, Jimmie Coffin, whisky to drink, but he refused. They gave Tah a hoo whisky to drink and he drank it. They gave whisky to the six or eight Indians who went in advance of Mr. Edwards' party and went into the cabin of the sloop. Mr. Edwards had been frequently annoyed by the results of the sale of liquor to the Indians, and his own life had many times been jeopardized. He therefore resolved to see with his own eyes and convince himself that the parties then in the harbor with the sloop were violating the laws of the land, and if they were that he would exercise his right as a citizen and his duty under the laws of Oregon to arrest them and take them forthwith with all speed to Wrangel and there deliver them up to the authorities. For this purpose he called a meeting of the Kake Indians at the school house; he informed them of the objects of the meeting. After opening the meeting with a song he requested 14 volunteers to assist him in finding out whether these men on the sloop were actually violating the law or not, and, if they were, to go prepared to arrest them and start immediately to Wrangel—not armed to the teeth nor with handcuffs—but with small cords in his pockets, to bind them safely and conduct them thither.

"A canoe with the larger number of the volunteers proceeded to the sloop under his directions to find out what was being done on board, and he followed himself in a smaller canoe with the rest of the volunteers. When he arrived at the sloop the Indians who had preceded him were engaged in drinking whisky furnished by the occupants of the sloop. Mr. Edwards was particular to see for himself that the Indians were drinking. He was particular to know that it was whisky they were drinking. Then he gave orders to bind the two men. The cabin was small, and with the two men and the six or more Indians in it there was not much chance to do anything. The Indians informed him that the men were getting the advantage of them then he had those Indians on the outside who could not get in tear the roof off the the cabin, and he threw down the ropes he had with him to bind them. This having been done he began to clear the sloop for sailing. He had the anchor raised and requested all the Indians to leave the sloop and return to the village, leaving him only and two Indians to man the sloop. He had the Indians take on shore with them a revolver and a rifle, presuming no doubt that they were all the firearms on board. These he ordered to be placed in the schoolhouse. The Indians also took a field-glass and the keg, which was partially filled with whisky. When alone on the sloop with these two Indians and the two desperate smugglers he had not counted on the possibility of any more firearms being on board, but Malcolm Campbell, the owner of the sloop, managed to get his left hand loose, reached under the foot of the bed and got a revolver, and shot at Mr. Edwards three several times, mortally wounding him, and immediately thereafter shot the other two Indians, one with the revolver, so that he jumped into the water and never afterward was seen or heard of. The other while attempting to escape by swimming was shot at with his rifle and he was never more seen or heard of. Campbell's associate on the sloop, Emery Elliott, managed to get his hands loose and cut the cords which bound Campbell's feet, and thus both were liberated. They then proceeded to get away from the place. They found the anchor already up, and they said that they attempted to make Wrangel with the wounded man, but they said the winds were contrary. They next tried to make Juneau, but met with a head wind and could not. They, however, reached a point near Point Gardner. After this they sailed for Killisnoo and were there met by Dan Campbell, a retail liquor dealer of Douglas City, who with another party started out of Douglas in another sloop hunting for them, fearing from their long absence that they had met with an accident or been captured. Here Jimmie Blaine saw the wounded man, Mr. Edwards, all but unconscious, he being the only known white man, other than Campbell and Elliott, who saw Mr. Edwards alive and conscious, or partially so, after receiving his wound. Here he was furnished with the only food he obtained since receiving the wounds three days before,

yet strange to say, this man Jimmie Blaine was never called upon to testify in any of the cases or at the coroner's inquest.

"The object of their devious sailing was accomplished. The victim was unconscious, no ante-mortem statement could be got from him; dead men, or unconscious men, tell no tales. They arrived at Sitka about thirty-six hours after the infliction of the wounds, and the victim died about ten hours thereafter.

"A coroner's inquest was held over the remains, but the only testimony produced before the jury was that of the physicians as to the cause of his death, the clerk of the court as to the identity of the remains, and the testimony of the self-confessed murderer and his accomplice as to the manner of his receiving the wounds which caused his death. The jury, in writing, asked for further testimony, but none was furnished; they ask for instructions, but they are informed by the U. S. commissioner, *ex officio* coroner, that instructions are useless; that it is simply a case of piracy—piracy on the high seas. And, of course, Malcolm Campbell is justified in the deed."

Subsequently, Malcolm Campbell and Emery Elliott were convicted of giving liquor to Indians and were fined $40 each, in satisfaction of which Malcolm Campbell served in jail six days and paid $28, and Emery Elliott was confined in jail ten days and paid $20.

Campbell was also held for manslaughter in the sum of $1,000, but his case when presented to the grand jury at Juneau was ignored by them.

For writing a statement of the whole affair, Dr. James E. Connett, of the Friends' mission at Douglas, was waited upon by a band of masked outlaws, called out of bed at about midnight on April 24, upon the pretext that a miner had been badly injured and needed surgical attendance, and deliberately tarred and feathered.

As soon as the miners at the Treadwell mines, Douglas City, heard how Dr. Connett had been outraged, they held a meeting and resolved to raise $500 to assist in bringing to justice the perpetrators of the crime. However, no efforts were made by the officials to ferret out the matter.

Appropriations for education in Alaska.

First grant to establish schools, 1884	$25,000
Annual grants, school year—	
1886-'87	15,000
1887-'88	25,000
1888-'89	40,000
1889-'90	50,000
1890-'91	50,000
1891-'92	50,000

PERSONNEL, SALARIES, ETC.

General agent of education for Alaska, Dr. Sheldon Jackson, Alaska, $1,200; assistant agent of education for Alaska, William Hamilton, Pennsylvania, $1,200; superintendent of schools for the southeastern district, James Sheakley, Pennsylvania, $480.

During the past three years the schools in southeastern Alaska have been under the direct supervision of Hon. James Sheakley, to whose judicious oversight their success has largely been due. Mr. Sheakley, having decided to return to the States, resigned his position as superintendent of schools for the southeastern district, and was succeeded by Mr. W. A. Kelly, formerly superintendent of the Industrial Training School at Sitka. Mr. Kelly entered upon his duties on May 1, 1892.

ADVISORY BOARD.

Hon. Lyman E. Knapp, governor of Alaska, Vermont, $200; Hon. John S. Bugbee, U. S. district judge, California, $200.

LOCAL SCHOOL COMMITTEES (WITHOUT SALARY).

Sitka, Edward de Groff, N. K. Peckinpaugh, John G. Brady; Juneau, Karl Koehler, John G. Heid, Eugene S. Willard; Douglas, P. H. Fox, G. E. Shotter, S. R. Moon; Wrangel, Thomas A. Willson, Rufus Sylvester, W. G. Thomas; Jackson, J. W. Young, W. D. McLeod, G. Loomis Gould; Metlakahtla, W. Duncan, D. J. Leask; Kadiak, N. Kashevaroff, F. Sargent; Unga, N. Guttridge, M. Dowd; Unalaska, N. S. Reesoff, N. B. Anthony.

Teachers of public schools.

TEACHERS AND EMPLOYÉS IN CONTRACT SCHOOLS.

Anvik (Episcopal).—Rev. John W. Chapman, Vermont; Rev. O. Parker, Oregon.

Point Hope (Episcopal).—John B. Driggs, M. D., Delaware.

Kosoriffsky (Roman Catholic).—Rev. Paschal Tosi, Sister Mary Stephen, Sister Mary Joseph, John Burke, John Nagro, Mrs. Emma Bandouin, Sister Mary Paulina.

Cape Vancouver (Roman Catholic).—Rev. Joseph Treca, Rev. Paul Muset, Mr. John Rosati.

Nulato (Roman Catholic).—Rev. Robaut, Rev. Ragaru.

Bethel (Moravian).—Rev. John H. Kilbuck, Rev. Ernst L. Weber, Mrs. John H. Kilbuck, Mrs. E. L. Weber, Miss Lydia Lebus.

Carmel (Moravian).—Rev. F. E. Wolff, Mrs. F. E. Wolff, Miss Mary Huber, Miss Emma Huber, Rev. J. A. Schoechert.

Cape Prince of Wales (Congregational).—Mr. H. R. Thornton, of Virginia; Mr. W. T. Lopp, of Indiana.

Point Barrow (Presbyterian).—Mr. Leander M. Stevenson, of Ohio.

Sitka (Presbyterian).—W. A. Kelly, principal; Rev. E. A. Austin, chaplain; Miss Anna R. Kelsey, matron of girls' department; Mrs. A. E. Austin, matron of boys' department; Mrs. S. A. Saxman, assistant matron of boys' department; Mrs. M. C. De Vore, teacher of schoolroom No. 2; Mrs. Clarence Thwing, teacher of schoolroom No. 1; Miss Frances Willard (native), primary teacher; Miss Mate Brady, in charge of sewing department; Mrs. Maggie Simson, in charge of laundry department; Miss Kate A. Rankin, in charge of cooking department; Mrs. Josie Overend, in charge of girls' hospital; Mrs. Tillie Paul (native), in charge of boys' hospital; Miss Georgie Guest, in charge of teachers' cooking department; Mr. J. A. Shields, carpentry department; Mr. A. T. Simson, boot and shoe department; Mr. Ernest Struven, cooper department; Mr. John Gamble, general work; Dr. Clarence Thwing, physician; William Wells (native), interpreter.

Unalaska (Methodist).—Mr. John A. Tuck, Mrs. John A. Tuck, and Miss Lydia F. Richardson.

Metlakahtla.—Mr. William Duncan, Mr. James F. McKee, Mrs. James F. McKee.

Unalalaklik (Swedish Evangelical).—Rev. Axel E. Karlson, Augustus Anderson, David Johnson, Miss Hannah Swenson.

Yakutat (Swedish Evangelical).—Rev. Albert Johnson, Rev. K. J. Henrickson, Miss Anna Carlson, Selma Peterson, Agnes Wallin.

TEACHERS IN PRIVATE AND CHURCH SCHOOLS.

Hoonah (Presbyterian).—Rev. John W. McFarland, Mrs. M. D. McFarland, Frederic L. Moore (native).

Juneau (Presbyterian).—Rev. Eugene S. Willard, Mrs. E. S. Willard, Miss Elizabeth Matthews, Miss Margaret Dunbar, Rev. S. H. King, Mrs. S. H. King.

Juneau(Roman Catholic).—Rev. John Althoff, Sister Mary Zeno, Sister Mary Peter, Sister Mary Bousecouer.

Jackson (Presbyterian).—Mrs. A. R. McFarland, Miss C. A. Baker, Rev. J. Loomis Gould, Mrs. J. L. Gould.

Douglas (Friends).—Mr. S. R. Moon, Mrs. S. R. Moon, Mr. E. W. Weesner, Mrs. E. W. Weesner, Mr. C. H.Edwards.

St. Paul Island (North American Commercial Company).—Simeon Milevedoff.

St. George Island (North American Commercial Company).—A. L. Noyes, M. D.

Nuklukahyet Yukon River (Church of England).—Rev. and Mrs. T. H. Canham.

Buxton, Yukon River (Church of England).—Rt. Rev. Bompas.

Rampart House, Yukon River (Church of England).—Rev. C. G. Wallis.

SUPERVISION.

In accordance with your instructions, and by the courtesy of the honorable Secretary of the Treasury and Capt. L. G. Shepard, acting chief of the Revenue Marine Division, I was allowed transportation on the U. S. S. *Bear*, Capt. M. A. Healy, commanding. On the 2d of May, 1892, I started for my third summer's work on the coast of Siberia and Arctic Alaska. We reached Unalaska on the 22d of May, where I found the school in a flourishing condition. From Unalaska we proceeded to the Seal Islands, where I secured the statistics of the schools kept by the North American Commercial Company, a statement of which has already been given. From the Seal Islands we went to St. Matthew Island, where the captain rescued one of a party of three who had been left on the island the preceding season for the purpose of hunting polar bear. The other two men were not found, and are supposed to have been drowned. From St. Matthew Island the ship passed directly over to Cape Navarin, Siberia, which was reached on the 6th of June. It was the intention to have secured a load of reindeer at this point, but the surf was so heavy that no landing could be made.

From Cape Navarin a course was taken to the settlement on the northwest point of St. Lawrence Island, where the village and schoolhouse were inspected. From St. Lawrence Island we attempted again to make the coast of Asia in the neighborhood of Indian Point, but, being headed off by the great fields of ice, the captain changed his course and attempted to make King Island, in doing which he got fast in the ice, and was only able to reach the mission school at Cape Prince of Wales. But, after being kept three days a prisoner in the ice, the captain determined to break his way through. The shocks received made the ship tremble from bow to stern. In attempting to force his way through the ice, he broke one of the blades of the propeller, but by continuous work finally reached clear water to the eastward, and on the 15th of June moored the ship to a large field of ice off Kadiak Island.

This was the village that last September we found to be in a starving condition, but the food so generously issued by Capt. Healy had tided them over until the seal and the walrus came in their vicinity, so that we found them in good condition. Being anxious to ascertain the fate of the teacher at Cape Prince of Wales, an effort was made to reach that point through the ice. After great difficulty in ramming his way through the ice, we came on the morning of the 16th of June within 4 miles of the place where, the ice being too solid for further progress, the captain very reluctantly turned and made for Golovin Bay, where it had been reported that some miners were out of provisions and in a starving condition. At Golovin Bay communication was opened with the miners. While waiting for the party to get ready to sail, a flying trip was made to St. Michael, where the teachers, missionaries, and traders along the great Yukon River were waiting for the annual vessel and supplies from San Francisco. On the 21st of June the miners at Golovin Bay were taken on board, and on the 22d taken to St. Michael. While at St. Michael I had an opportunity of conferring with the teachers and examining some of the pupils of the various schools.

The annual arrival of the steamer bringing missionaries and traders from up the Yukon River 2,000 miles is the great event of the year at St. Michael. The river steamer *Arctic* is here met by the ocean steamer *St. Paul*, from San Francisco, and for a week or two this little settlement, cut off from the world eleven months in the year, is a scene of bustling activity. The furs of all northern and central Alaska are gathered here for shipment to market, and the provisions and trade goods of civilization for the coming year are brought up for distribution in the interior. It is a unique gathering, the only one of the kind that now takes place in the United States. From over into the British possessions, Fort Selkirk, 2,000 miles or more up the river, comes Mr. A. Harper, a pioneer trader, who has been 20 years in the country. Business is so brisk that he is proposing to establish a branch store 200 miles farther up the stream, which will bring him within a few hundred miles of the settlements of southeastern Alaska. It is believed that a mail route should be established across the country from Juneau to the mines on the Yukon. A mail not exceeding 250 pounds weight could be carried for, making four trips a year, at a rate not to exceed $1,500 the round trip. The best route is over the White Pass, which comes out on the Yukon at Windy Arm Lake. There is timber along the whole route. Winter on the Upper Yukon lasts from September to May. Rev. and Mrs. T. H. Canham, of Fort Adams, will open a new station there this fall.

In the United States Postal Guide is Mitchell Post-Office, Alaska. I do not believe that over 100 of the 60,000,000 American citizens, if asked, could designate its location on the map. It is 1,400 miles above the mouth of the Yukon, near the junction of Forty Mile Creek with the Yukon River, and is the only post-office for the country for 1,000 miles around. The postmaster is Mr. L. N. (Jack) McQueston, the trader, another pioneer trader of twenty years' standing. The office receives a chance mail from the States once or twice a year. The salary amounts to from $2 to $3 per year. Last winter 108 men wintered at Forty-Mile Creek, which, by the way, is a river hundreds of miles long. Mr. McQueston raised 9 tons of turnips. Barley and oats grow and ripen well. A frost on the 7th of August, 1891, killed the potatoes. The placer gold mines in the neighborhood of this trading post yield from $75,000 to $80,000 worth of gold dust each season. It would be money well expended towards the development of the country if Congress would make an appropriation for opening up a trail from the coast at Chilcat to the headwaters of the Yukon, and give the hardy miners a more frequent mail.

Near the trading station, on the east side of Forty-Mile Creek and south side of the Yukon River, is Buxton, the location of St. John's Mission of the English Church. This mission was established in 1888, the first missionary being Rev. J. W. Ellington. In 1890, through privations and hardships, he became insane, and in 1891 was returned to his friends in England. His station will be occupied by Right Rev. Bompas, Bishop of McKenzie River, for two years at Fort Adams.

Rampart House: This is a Church of England Mission and a Hudson's Bay Company's trading station on the Porcupine River, one of the tributaries of the Yukon. It was established in 1874. During the international boundary survey, by Messrs. Turner and McGrath in 1890–'91, it was found to be 20 miles within the lines of the United States. Consequently, in 1891 the place was moved 20 miles farther up the river to get within the British jurisdiction. In the summer of 1891 Rev. C. C. Wallis went by the way of San Francisco to England, returning this season.

Fort Yukon: The old buildings at Fort Yukon have been taken down by the Alaska Commercial Company, and the logs cut up for fuel for the steamer's furnaces.

On the Upper Yukon, last winter, fish gave out in January, and the natives subsisted on rabbits. On the Keokuk, above Nulato, 3 or 4 died of starvation. One native subsisted on soup made from an old bearskin.

St. James' Mission, at old Fort Adams, was established by Rev. T. H. Canham, of the Church of England, in 1888. Mrs. Canham was the first white woman to cross

the Rocky Mountains north of the Arctic Circle in winter. This she did with her husband on snow-shoes in 1888. The mission is 4 miles up the Yukon, on the north side of the mouth of Tonikokat River and 18 miles below the mouth of the Tanana. In 1891 Rev. J. L. Prevost was sent to this station by the Missionary Society of the Methodist Episcopal Church. Mr. and Mrs. Canham remained with him during the winter, and this summer removed to Buxton, leaving Mr. Prevost in sole charge of the station. At this school, the greatest attendance was 67, the least 15, and the average 32. During the winter of 1891-'92 they had 67 pupils in school; average daily attendance, 23. There are about 800 natives in Tanana Valley; about 200 on the Yukon, between Tanana and the boundary; about 100 permanently at Fort Adams, and about 75 at Tanana Station.

Tanana Trading Station: This station is 8 miles down the Yukon River from St. James' Mission, and is kept by Mr. G. C. Bettles. This station is the winter headquarters of the miners on the Koy-u-Kuk River.

St. Peter Claver's Mission (Roman Catholic Church) is on the northwest bank of the Yukon River, at the old American station, about 2½ miles above the mouth of the Nulato River. There is also a trading station here, kept by a creole, H. Kokerine, who has been a resident of Alaska for forty years.

Anvik is the seat of Christ Church Mission of the Protestant Episcopal Church—on the south side of Anvik River and west side of the Yukon, at the junction. It was established in 1887 by Rev. Octavius Parker and Rev. John W. Chapman. Mr. Parker retired in 1889, and in 1890 Mr. Marcus O. Cherry was sent in his place. Mr. Cherry returns to the States this fall. The trading station is in charge of Dennis Belkoff, a Sitka creole.

Kozorifzky, Holy Cross Mission (Roman Catholic Church) is on the north bank of the Yukon, directly opposite the mouth of Shageluk Slough. This is their largest establishment in the Yukon River Valley, a school of 80 boarders, in charge of the following sisters of St. Ann (Mother House started in 1850, near Montreal), Mother Superior Mary Stephens, Sisters Mary Zephrena, Mary Prudence, Mary Joseph, Mary Englebert, and Mary Paulena. Father Tosi in 1891 raised 40 bushels of potatoes at the station, besides turnips (one of his turnips weighed 17 pounds and another 15½ pounds) and cabbages.

Ikogmut, Russo-Greek Mission, Rev. Zacharias N. Belkoff, priest.

Eight miles up the Yukon River from Anfreieffski and on the Kon-e-Kova River, 2 miles above its mouth, is a trading station (north side), kept by Charles Peterson.

At Kublik (mouth of Yukon) is a station kept by a Kamkoff creole.

Unalacleet is a Swedish mission, composed of Rev. Axel E. Karlson, August Anderson, David Johnson, and Hannah Swenson. They had 72 children in school last winter, with an average attendance of 22. They also have a dozen or more boarders, and will enlarge their buildings this season. They are also talking of a station at Golovin Bay.

At Unalacleet is a living house, one and one-half stories high, 25 by 22 feet. The kitchen is 25 by 20 feet. The schoolhouse is two stories high, 20 by 22 feet. The workshop is 25 by 20 feet. There are a bath house and stables and several store houses. Four acres of ground are cleared up, upon which they will this year raise 70 bushels of potatoes. They have 2 bulls, 2 cows, and 3 goats.

Father Tosi, of the Roman Catholic Church, has selected a new site for a boarding-school, near Kusilvak Mountain, near the mouth of the Yukon River. He reports 1,500 natives as living between Cape Vancouver and the mouth of the Yukon.

Having transported the missionaries to St. Michael on the 23d of June, another start was made for Cape Prince of Wales, we anchoring in the port of Clarence on June 25, where we met Mr. W. T. Lopp, the teacher at Cape Prince of Wales. While at anchor at Cape Prince of Wales, the steam whaler *Newport* arrived from San Francisco, having on board Mr. and Mrs. Thornton and Miss Kittridge, for the mission school at Cape Prince of Wales; Mr. McClellan, a carpenter, for the erection of additional buildings at that point; Dr. Beaupre, for the Mission station at Point Barrow; also Messrs. Miner W. Bruce and Bruce Gibson, for the Reindeer Station. On the 28th of June, having been transferred to the steamer *Newport*, I visited the school and station at Cape Prince of Wales.

On the 29th of June I went ashore on what is known as the watering station, as the northeast side of Port Clarence Bay, and selected a site for the central and first reindeer station. A piece of driftwood had been set in the ground, with an empty barrel at its base, as a signal for ships. Upon this trunk of a tree we nailed our flag. A tent was borrowed from the missionaries at Cape Prince of Wales and another was furnished by Capt. Healey, which were kept on the spot to shelter the goods and supplies which a few hours afterward were landed from the steamer *Newport*. Port Clarence, which was known as Kaviayak Bay, was explored by Capt. Beechy, in August, 1829, and was named after the British King, then Duke of Clarence. The inner harbor was named after Lord Grantley, and Points Spencer and Jackson after distinguished officers of the royal navy. Port Spencer, at the extremity of a low

sand spit which extends some 10 miles from the coast, forms the southern and western side of the harbor. This sand spit is low and marshy, with numerous lakes. From Point Spencer to Point Jackson, a distance of 2 miles, is the entrance to the bay The northern and eastern shore of the bay rises from the sea to the mountains. Along the seashore are numerous lagoons and small lakes which, in their season, are covered with numerous wild fowl. The bay, in extent, is about 12 miles from east to west and 14 miles from north to south. At the extreme eastern end two narrow sand spits, extending from the northern and southern shores, inclose an inner harbor, called Grantley Harbor. The entrance is about one-third of a mile across. It extends about 9 miles from east to west and 3 miles from north to south. At the eastern end of Grantley Harbor is a second strait, about 300 yards wide, which connects with a third body of water or inland lake, called by the natives Imourouk. Into this lake empty two rivers, the Aghee-ee-puk and Cov-vee-arak. Along this line of water courses is an inland road to Grantley Bay and Norton Sound. To the north of Grantley Harbor Mus-ik-a-charne Peak rises to a height of 1,600 feet. At the head of the sand spit between Port Clarence and Grantley Harbor is a large lagoon, and between the reindeer station, at the beach, and the pass through the highlands, on the north, are about a thousand fresh-water ponds, or small lakes. At the extreme northeast corner of Port Clarence, near Grantley Harbor, and upon a small mountain creek, I selected the location of the headquarters of the reindeer station. A few miles distant from Grantley Harbor was the former location of the headquarters for this region of the Russo-American Telegraph Exploration of 1865 and 1867. The shores of the sound on the site of the reindeer station are formed of shingle, or water-worn stones. These shingled beaches become a marked characteristic of large sections of the coast in northern Bering Sea and Arctic Ocean. Of late years it has become the favorite rendezvous of the whaling fleet that gathers here about July 1 to await the arrival of a vessel from San Francisco with fresh provisions, coal, lumber, etc. It also enables them to ship the spring catch of whalebone to San Francisco before entering the dangerous Arctic. Upon my first visit, about July 2, 1890, twenty-five whalers were at anchor off Port Spencer, awaiting the arrival of the ship. On June 30 I returned on the *Bear*, and the next day the captain weighed anchor for South Head Sound, Lawrence Bay, Siberia.

From 2 to 8 o'clock p. m. we steamed through broken ice, and at 11:45 p. m. dropped anchor off the village. An officer and some men were at once sent ashore, and by 6:30 a. m. the ship's launch returned with the first load of reindeer. At this place we secured forty-one animals, also four native herders, who agreed to go with us and take charge of the herd on the American side. At 4 o'clock on the afternoon the captain dropped down the coast some eight miles to another camp, where twelve additional deer were secured, and at midnight weighed anchor and stood north, steaming through heavy fields of ice. At 4:30 our Asiatic interpreter, Rainbow by name, was landed at North Head, and at 5:30 that evening the ship came to anchor off the reindeer station. The surf being too heavy, nothing was done that evening. Bright and early on the morning of the 4th of July (6 a. m.) the first boat-load of the first herd of domestic reindeer in Alaska and on the the continent of America was landed. The deer, with their fore feet tied together, were taken ashore in the ship's launch and carried up from the beach on litters borne by the natives. They were then untied, hobbled, and turned loose. Three ran away and took to the hills, and the herders had a long chase; but they were finally recovered. One of the deer had his hind legs broken in Siberia and had to be killed. The ship was decorated with flags, in honor of the day. On the 5th of July Capt. Healy very kindly had his carpenters make a flag-staff for the station, which was landed that same evening and placed in position, after which the *Bear* started again for Siberia.

At noon, on the 6th of July, we anchored off Whalen, having been for an hour steaming through heavy fields of ice. Finding no reindeer in the vicinity of the village, anchor was weighed and the ship got under way, following the coast to the northwestward, coming to anchor two hours later off Enchowan, but at 10 o'clock was compelled to shift anchorage on account of the heavy fields of ice. The following day the ice compelled the captain to shift his position two or three times. At this place sixteen deer were procured and taken on board. At 9:40 anchor was again weighed and the start made for the reindeer station, steaming all night through heavy fog, and from 5 to 7 through heavy fields of ice, reaching Cape Spencer at 5:40. On the 9th of July the ship *America* was towed in the harbor, having on board, among other things, lumber, coal, and supplies for the reindeer station. On the 10th the captain run down to the reindeer station, unloaded the reindeer, and also 240 packs of coal, and 77 cases of pilot bread, all of which he had received from the bark *Percy Edwards*. On the 12th of July, going aboard the steamer *Newport*, which had taken on board the lumber for the building at the reindeer station from the bark *America*, I returned again to the station and superintended the landing of the building, returning to the *Bear* on the 13th.

On the 14th the *Bear* got under way for Siberia, from 1 to 2 p. m., steaming through large masses of broken ice. On the 15th we came to anchor off Cape

Serdze Kamen, Siberia, in latitude north, 67° 27′; longitude east, 180° 20′. This cape is the northernmost limit of the explorations of Bering, he having reached here August 15, 1728. The meaning of the name is "the heart of rock," because of a fancied resemblance of a heart in the face of the rocky cape. Along the coast to the westward are several native villages. The mountain peaks in the back country rise to an elevation of from 2,000 to 5,000 feet. Fresh-water lakes inland and lagoons along the shore everywhere abound. After Bering, this shore was visited by Capt. Cook's expedition in August 1778, when he struck the coast, coursing from Alaska as high north as North Cape. It was again visited on April 22, 1823, by Admiral von Wrangell in his fourth Siberian expedition.

At 9:30 a. m. Assistant Engineer Falkenstein and Surgeon S. J. Call went ashore after reindeer, bringing on board during the afternoon some twenty-one animals. The vessel was surrounded much of the time by heavy masses of drifting ice. The following day the captain was compelled to shift anchorage several times, the stock of his port anchor being carried away by the ice. On the 17th the ice became so heavy that the ship moored to an ice-floe and drifted with it. Towards night, some openings being discovered in the ice, the ship dropped down the coast slowly, forcing its way, until, about 4 a. m., when it came to anchor again in the ice. At 9 a. m. a large ice-floe bearing down upon the ship, anchor was again weighed, when it was found that a second anchor had been broken by the ice. The 19th was spent in shifting anchor and dodging ice-floes. The surgeon and two seamen being ashore and unable to return to the vessel, the captain hired two native boys to cross the ice, with a launch for the party. In the evening, the wind having changed and loosened the ice somewhat, the surgeon returned with six reindeer. Another attempt was made to start the engine and force the ship through the ice, but at midnight the attempt was given up. The starting and stopping the engine and drifting in heavy and closely packed ice were continued the following day until afternoon, when the ice became too heavy for further progress and the ship was allowed to drift. By constant ramming, towards night, there seeming to be a chance to get out, the ship was started again and by constant ramming the heaviest ice was broken through, and by midnight clear water was reached, we having been shut up in the ice for a week. Coming abreast of the village of Utan, Siberia, a boat was sent ashore after Passaic, a noted deer-man, who resided there. He having come on board it was learned that his herd was three or four days distant. As a large ice-floe was seen bearing down upon us, and as we did not relish the idea of being imprisoned another week and perhaps wrecked in this bay, at 3:50 a. m. we were again under full sway, running a race with the ice, which was drifting down upon us, a solid, unbroken mass of ice, as far as the eye could reach. The ice rapidly gained upon us. Large, detached pieces like scours forged ahead of us, placing themselves directly in our path, against which we rammed and jarred, but at noon the projecting cape of the bay was reached and passed just as the ice-floe was swinging upon it, barring further progress. During the forenoon we steamed through fog so dense that we passed through Bering Straits before we knew it, and when the fog lifted found ourselves twenty miles ahead of the place where we supposed ourselves to be and at 10:30 that night came to anchor off the reindeer station.

The reindeer on board were landed the following morning at 5:30 o'clock. In the afternoon the captain sent his carpenter and a boat's crew ashore to prepare the foundations for the station house, and also sent a detachment on shore the following day, when, a storm having set in, the captain was compelled to shift anchor into deeper water.

On Monday, July 25, we again got under way for North Head, Siberia, reaching Cape Puangoune, Siberia, at midnight. No one coming off from the village to the ship, and the weather beginning to be stormy, at 8:10 a. m. the anchor was weighed and the ship steamed into anchor in Lutke Harbor, Siberia, at 9 o'clock. St. Lawrence Bay was so named by Capt. Cook because he first anchored in it on St. Lawrence day, August 10, 1778. The bay was fully surveyed by Capt. Lutke of the Russian navy in 1828. It is 11½ miles across its mouth and extends inland about 24 miles. Its northeastern extremity is marked by a rounded top mountain, 1,794 feet high, called Cape Nouniagmo. On the southern slope is a native village of the same name, also known as North Head. From 5 to 6 miles from Cape Nouniagmo is Cape Panougoun, which marks the commencement of the inner bay. Extending from Cape Panougoun is a bank of gravel or shingle which forms Lutke Island and makes a sheltered cove 1½ miles in diameter. This is a good anchorage for ships. In this cove the U. S. S. *Briggs*, in search of the Jeanette, was anchored for the winter, when she took fire and burned to the water's edge. There is a native village on this cove. While we were at anchor, waiting for the fog to lift and the storm to pass by, the surgeon and some of the officers went ashore on Lutke Island and shot, in a few hours, 106 eider ducks. On July 27, the gale having subsided, the ship got under way at 7:30 in the morning, and, steaming out of Lutke Harbor, passed Cape Chargilach with its native village on the south side of the bay. We anchored at 10 off Cape

Kelcougonn. This cape is a bold, rock promontory, crowned with four mountain peaks, 1,542, 1,296, 1,257, and 1,206 feet high, respectively. A native village clings to the northeastern base, and a smaller one, called Jandonga, on its southwestern slope. Here the surgeon, Dr. Call, went ashore in the afternoon with a boat's crew, procuring ten reindeer. The following day 56 more were procured and brought on board. At midnight the ship got under way, reaching the reindeer station at 5:30 o'clock. On July 29 by 8:30 the deer were all on shore. On the 31st the captain again sent his carpenters and a detachment of men on shore to work at the station house. Towards night, a gale setting in, the ship was compelled to anchor out in deeper water. On Monday, August 1, the men that could be spared were again sent ashore to work at the buildings.

At 4:15 a. m. on August 2 we again got under way for Siberia, and at 5:45 a. m. on the 3d of August came to anchor off Indian Point. Learning that there were no deer in the vicinity, we again got under way for East Head, at 1:25 p. m., stopping off a village near Bald Head. There being too much surf to land, we continued around Bald Head into Clover Bay, passing the mouth of Reindeer River, rounded Cape Haidamaik, and anchored in Port Providence, under Mount Slavianka (1,427 feet), at 2:40 p. m. Three umniak loads of natives soon came over from the village on the sand spit. Learning that there was a herd of deer in the vicinity of Emma Harbor, Surgeon Call was placed in charge of a boat crew, and with an interpreter went to interview the reindeer men. Later in the afternoon a boat load of natives were hired and sent after Utoxia, who had gone to the head of the bay (14 miles) after seal. Both parties were out most of the night. Surgeon Call, upon his return, reported that the deer men on Emma Harbor had but few deer and would not sell any. Utoxia, upon his arrival, reported a large herd to the westward of the head of the bay. Clover Bay is narrow and runs between two parallel ranges of mountains from 1,000 to 2,300 feet high, with precipitous sides from the water up, while steep and bare mountains, flecked with great patches of snow, present a panorama of grand scenery. A bright sun and blue sky add to the enjoyment of the day, as the steamer slowly picked her way along this memorable fiord. At 10:45 a. m. we were abreast of Cape Lakhatchov, the northern entrance of Emma Harbor, where the British ship *Clover*, Capt. Moon commanding, in search of Sir John Franklin, entered in 1848 and 1849. At 11:30 we passed Mount Kennicott (2,343 feet), so named in honor of Maj. Robert Kennicott, director of the Chicago Academy of Sciences, who was in charge of the Alaska expedition of the Russo-American telegraph expedition of 1865 and 1867. At noon we passed Cache Bay, and at 12:30 Long Harbor, which was the winter quarters of one party connected with the telegraph expedition. At 1 p. m. we came to anchor off Cape Ignatief, Vladimir Bay, Siberia. At once a party was organized, consisting of Dr. Call, the surgeon, Lieut. White, Assistant Engineer Falkenstein, and two natives, to visit the deer men. At the same time another party, consisting of Mrs. Healy, the wife of the captain, Engineer Broadbent, and myself, went down the bay 2 miles to visit the site of the telegraph expedition. The solid stone walls of the two houses occupied by them remained to mark the site. One was a circular room about 20 feet in diameter, and the other a rectangular one 9 by 14 feet. The stone walls were about 4 feet high, symmetrically laid on the inside, and on the outside covered with earth. They were placed upon the highest point of a small, narrow peninsula, with the sea close to on three sides. A few pieces of glass and copper were picked up as mementoes of the place; also some braces and knees of the native sleigh, made out of reindeer horn. The land around was strewn with rusty hoops from barrels and casks. Two or three lone graves told their own sad story. The land was dotted with beautiful wild flowers, and icy streams came down to the sea from large patches of snow that still remained upon the mountain sides.

On the 5th of August, Dr. Call and party returned to the ship about 10 a. m. They had been inland some 20 miles, but failed to find any deer men. On their way up the valley which leads inland from our anchorage they found frequent piles of chips, made in trimming the poles forty-five years before. The poles themselves had long disappeared, probably having been carried off by the natives. At noon we got under way for Holy Cross Bay, landing Utoxia as we passed Port Providence. The other native, Wallace, continued with us as interpreter. At 3:40 p. m. we rounded Cape Stoltz and stood up the north coast of the gulf of the Anadyr. The mouth of this gulf, from Cape Tchoukotskoi down the north to Cape Thaddeus on the south, is 200 miles across, and the circuit of the gulf, without measuring the coast line of the smaller bays and indentations, is 420 miles. The first navigator to sail this sea was Capt. Bering, who was followed in 1826 and 1829 by Capt. Lutke, of the Russian navy. The north coast line is remarkable for its bold, rocky shore, in many places rising perpendicularly from the water's edge. At 5 p. m. we were abreast of Jakkun, which is a high, steep bluff with a pyramidal rock. On we go parallel with the shore 10 miles distant past Cape Tchingan with its red band of rock running from summit to base. At 10 p. m. we were off Cape Aggen, to the north of which is

Transfiguration Bay. From this up 9 miles to Cape Eumelian the coast is bounded by a high, perpendicular rock like a wall. About midnight we passed Cape Bering, where the bold, rocky shore ceases and small Tchuktchi villages are seen. At 9 a. m. on August 6 traces of ice began again to appear, and soon we were skirting a large field of floating ice. Walrus being discovered, the ship was stopped and the captain and surgeon went off, securing a large bull, which was brought on board and given the interpreter as part pay for his services.

Along the northwestern coast of the gulf is a remarkable island, or false shore, which forms the southern portion of the Gulf of St. Croix. It is 45 miles long and but a few rods wide. A narrow, shallow canal separates this island from the mainland. There is a village of Tchuktchi near Cape Neetchk on the westernmost end, off which we were anchored several days during July, 1891. As we passed into Holy Cross Bay at noon a signal flag was seen floating at the village and two umniaks put off to intercept the ship. One of them was taken aboard, but when it was found that they wanted us to go to their village to trade ivory, the captain resumed his course towards the reindeer village on the west side of the bay, where we anchored at 2:50 p. m. Holy Cross Bay is 54 miles from north to south and 35 miles from east to west. Its northern end is within 10 miles of the Arctic Circle and its shore line has a circuit of 180 miles. The mouth of the bay is 13¼ miles across. At the northern end is Mount Matatchingai, with rocky sides rising 9,180 feet. It is a landmark for the whole region around. On the west side of Holy Cross Bay are large quantities of driftwood from the Andyr River. Soon after anchoring at the village 5 umniaks full of people come aboard. Inquiries were at once made for reindeer. At various times they represented the herds as close to and then as far off. They said that the herds had been driven down to the coast earlier in the summer, but the ship not being seen, had been driven back again into the country; that the mosquitoes were too bad to keep them near the water. At one time they would offer to sell a shipload, then only promised 9 and then again 3. When they thought we wanted bucks they had only does to sell, and when they found we wanted does their herd was all bucks. They also asked two prices for what they proposed to sell, and then wanted additional pay for the prospective increase. If they sold a doe she would bear another the next season, and so on, increasing from year to year; while the cartridges and powder for which they traded would be used up and they would have nothing left. The captain met their argument with another, that if their deer should die next year they would have nothing and starve, while if they had cartridges and powder they could shoot walrus and seal and live; or for what we could pay them they could trade with natives farther inland and get two deer from one.

Finally, after five hours' talk, the boat was lowered at 8:45 p. m. and Dr. Call, Assistant Engineer Falkenstein, the interpreter, and a crew of men were sent after the reindeer. In the vicinity of our anchorage was a temporary village of reindeer men. Every fall and spring they move all their household effects to and from the interior with their herd of deer. The village was their summer encampment by the sea. Around their neat looking tents were great quantities of deer harness and sleds, which were used in transportation. These Tchuktchi men cut their hair on the crown of the head, leaving a fringe around the head. Sometimes they leave a tuft in the center and have two rings of long hair. Sometimes a long lock of hair is left behind the ears, which is braided like a woman's. Some have a small mark or figure totemed on the cheek, forehead, or some part of the face. This is said to be done upon the loss of a near relative, also to mark the number of seals killed. The women have their cheeks covered with totem marks. Some of the women have strings of beads dangling from the ears. August 7 proved a rainy, stormy, and dismal day. The fact that the boat that went off the night before had not returned excited considerable anxiety, but by midnight it came in sight and was soon alongside, with 12 deer. The men had been sixteen hours pulling against the tide and striving to reach the ship. While absent they had discovered a large river more than a mile across at its mouth. While pulling along the side of this river they saw a bear and cubs. Pursuit was immediately made over streams and through swamps, and dodging from one hillock to another they crept up on their game. Cautiously raising their heads from behind the last hillock, with guns cocked, they found their supposed bear was a woman and children. At 5:30 a. m. on the 8th the cutter was sent ashore to gather moss and food. The deer men were put off, and at 8 o'clock we got under way, encountering a little floating ice in passing out of the bay. At 6:15 a. m. on August 9 we left our interpreter at the native village on Clover Bay, and at 7:45 a. m. stopped off the village at East Head to communicate with Utoxia, making arrangements with him to purchase deer during the winter, which should be called for the following season. At 1:30 p. m. on the 10th of August the ship anchored off the reindeer station and the deer were duly landed. This closed the trips for the season after reindeer.

Having arranged affairs at the reindeer station at 4 o'clock on the morning of August 11, the anchor was hove and the steamer *Bear* got under way for Kotzebue

Sound. By 10 o'clock we were rounding Cape Prince of Wales through the straits. Off to the westward 3 large umniaks were seen under sail en route to Siberia. The next day at noon we came to anchor off Cape Blossom, Kotzebue Sound. Soon after 12 umniak loads of Eskimo came off to the ship. This is the location of one of the international and intertribal annual fairs of the Arctic, and the annual opportunity for the sick through all Arctic Alaska to secure the services of a physician. The natives brought with them a number of the bones and tusks of the mammoth, which were secured for the Sitka Museum. At 10:45 p. m., the surgeon of the ship having attended to the ailments of the population that came on board, the anchor was hove and the ship steamed for Point Hope, which was reached at 9 p. m., August 13. The weather, however, was so foggy that the ship was compelled to go far out to sea to avoid the shoals off the point, and therefore we were unable to come to anchor until midnight. The following morning, the fog having lifted, the captain very kindly sent me ashore to inspect the station and confer with the missionary teacher. Returning to the ship at noon, we got under way, sailing to the north. Learning from the natives that a whaling schooner, *Silver Wave*, was wrecked in the vicinity of Icy Cape, a stop of a few hours was made at that point to secure definite information, after which, continuing northward, the refuge station at Point Barrow was reached at 11:45 a. m. on the 16th of August. Going ashore to confer with regard to school matters, I was detained until the fourth day there on account of a storm having come up, making the surf dangerous. Capt. Borden, the ex-keeper of the station, having been relieved from duty, Lieut. Jarvis was placed in charge by Capt. Healy, pending the turning over of the station to our former teacher, Mr. L. M. Stevenson, who had been appointed by the Secretary of the Treasury to take charge. On the 18th of August Mr. Stevenson and myself, after canvassing all sections of the vicinity, selected a location for the Presbyterian mission on the first rise of ground to the north of the village, lying back and between the village and the refuge station, and separated from the village by a small ravine. That same evening I was able to return on board ship through the surf. On the 19th the mission bell, which had been en route two years, was landed on the beach, and for the first time rang out upon the Arctic air. On the 20th of August Capt. Healy took the *Bear* to Point Belcher to bring up some coal which had been left from the previous season. On the 11th of June a whaleboat, containing 9 boys and 1 woman, was driven out to sea from Point Belcher, and they were unable to return until the 16th of July, being thirty-five days out to sea in an open boat. During the time they captured 11 walrus, 1 white bear, and all the seal that they could eat.

From the same place two boats' crew were driven off to sea, but were out only nine days. While at Point Belcher the *Bear* was boarded by Capt. Owen, of the whaling bark *Mermaid*, who brought us news and newspapers from civilization as late as June 30. At 4:30 p. m., on the 21st, anchor was weighed and the ship got under way to return to the refuge station. The Arctic currents were so strong that in the fog the ship was carried some 20 miles beyond its destination, so that we did not come to anchor off the station until 9:45 the next day. All duties having been discharged at the refuge station and school, at 4 o'clock on the morning of August 23 anchor was hove, and we started on our return to the south, anchoring off Icy Cape, on the next day, to enable the crew of the *Bear* to get off from the beach the Arctic schooner *Silver Wave*, which was accomplished on the afternoon of the 26th. Taking the schooner in tow at 8:15 a. m. of the 27th, the *Bear* started on its return to the reindeer station at Port Clarence. A gale having come up at midnight we anchored off Cape Sabin. The next morning another start was made, but, finding the sea too rough for comfortably towing the schooner, the captain ran under the lea of Cape Sabin and anchored. At 3 on the morning of the 30th we again got under way, reaching Point Hope at noon, where Lieutenant White and a boat's crew were sent ashore with the mail. The boat swamped on the beach. The men, however, escaped with nothing more than a drenching. On the morning of the 31st, the wind having shifted a little, anchor was weighed and another start was made for Cape Prince of Wales. At midnight, meeting the steamer *Jane Gray*, San Francisco papers as late as July 23d were received. On the evening of the 1st of September the Diomede Islands were sighted. In Bering Straits a strong tide was met, so that from 3 a. m. until 9 the ship steamed but 16 miles. From 9:30 until 5 p. m., with a full head of steam, no progress was made against the gale, the ship rather drifting back toward the straits, and the course of the ship was changed to the south. While opposite Cape Prince of Wales Mr. and Mrs. Thornton ventured off in a native boat through a heavy surf and a rough sea. From them we learned that Mr. W. T. Lopp and Miss Kittredge had been married (the first Christian marriage ever celebrated in Alaska north and west of St. Michael) and gone down to the reindeer station in a umiak on a wedding tour.

The gale drove us far south of our course, and when the morning of the 3d dawned no one on shipboard knew just where we were. About 6:10 o'clock, the fog lifting for an instant, land was sighted toward the northeast, which was afterward found

to be Kings Island. Owing to a succession of gales and the difficulty of towing a schooner through heavy seas, the ship was detained over a week in reaching Port Clarence. However, at 2:40 p. m., September 3d, anchor was dropped opposite the reindeer station, the surf being too heavy to admit of landing. The following day a landing was effected, and the various supplies that were to be landed at the station were taken on shore. Mr. A. S. McClellan, who during the summer had been erecting the mission residence at Cape Prince of Wales, was received on board for transportation to the Aleutian Islands, and at 10:50 p. m. the ship got under way for St. Michael, which was reached on the morning of September 6th. Here it was found that the steamer *P. B. Ware* was on the stocks, being built for the Yukon River trade, and that the workmen who had been brought up from Puget Sound had struck for higher wages and the work was at a standstill; that the company who were building the steamer had on the beach in a canvas house $75,000 worth of goods and supplies for the miners at the headquarters of the Yukon River, all of which was in great danger of being lost. On account of these things and the lateness of the season, the men in charge very naturally sought assistance from the revenue cutter. Recognizing the emergency, Capt. Healy sent to their assistance Assistant Engineer Faulkenstein, the carpenter, and 8 men from the crew, and each day Lieut. Jarvis was sent from the ship with a boat's crew to render such assistance as they could. Mr. McClellan and Mr. Brower, passengers on the *Bear*, also volunteered assistance. In nine days, through the assistance of the revenue cutter, the steamer was so far completed that she was launched. The birthday of the Emperor of Russia occurring on the 11th of September, special services were held in the Russo-Greek church at St. Michael. Flags were displayed and at noon a salute of 4 guns was fired. At 11:30 a. m. on the 15th of September anchor was hove and the ship got under way for Unalaska, reaching anchorage in Dutch Harbor at 10 a. m. on the 19th of September. On the evening of the 30th I was kindly received on board the revenue steamer *Rush*, Capt. W. C. Coulson, commanding. At 5 in the morning of October 1, in the face of a north-northwest gale, with snow and hail, we put out to sea for San Francisco. Great difficulty was experienced in rounding Priest Rock, for sometime doubt being expressed whether the ship could make it. Getting safely around the point in Analga Pass, a heavy tide rip was encountered and great seas swept over the ship from stem to stern. On the 8th the gale was so increased that it was not considered safe to run and the ship was laid to for twelve hours. Again resuming its course, we dropped anchor in San Francisco Bay at 10 o'clock a. m. on the 11th of October. The next day I left by the Santa Fe route for Washington, which place I reached at noon on October 18, having traveled 16,997 miles.

I remain, with great respect, yours, truly,

SHELDON JACKSON,
General Agent of Education for Alaska.

CHAPTER XXIX.

THE HISTORY OF SUMMER SCHOOLS IN THE UNITED STATES.

By W. W. WILLOUGHBY, A. B., PH. D. (JOHNS HOPKINS).

CONTENTS.

Introduction.

PART ONE.

Schools for original research and for the training of specialists.

I. Schools of Biology: (1) Anderson School on Penikese Island. (2) Chesapeake Zoological Laboratory of the Johns Hopkins University. (3) Annisquam and Wood's Holl Laboratories. (4) Brooklyn Institute Biological Laboratory.

PART TWO.

Summer schools giving instruction in single subjects.

I. Schools of Philosophy, Literature, and Ethics: (1) Concord Summer School of Philosophy and Literature. (2) Glenmore School for the Culture Sciences. (3) Chicago Kindergarten College Literary School. (4) Milwaukee Literary School. (5) School of Applied Ethics at Plymouth.

II. Schools of Languages, Music, Oratory, Expression, and of Physical Training: (1) Summer School of Languages at Amherst College. (2) Sauveur Summer College of Languages. (3) Other Schools of Languages. (4) Lexington (Mass.) Normal Music School. (5) School of Expression. (6) Schools of Oratory. (7) International Y. M. C. A. Training School.

PART THREE.

I. Chautauqua.

II. Chautauqua Assemblies.

III. Martha's Vineyard Summer Institute.

IV. (1) Harvard University Summer Schools. (2) University of Virginia Summer Schools. (3) National Summer School of Methods, Glens Falls, N. Y. (4) Other schools: Wisconsin Summer School; Campbell University Summer School; Flint Normal College School; Asbury Park Seaside School of Pedagogy; Niantic School for Teachers; Sweet Springs School; Morehead City School; Ann Arbor Summer School; New London (N. H.) School for Popular and Normal Study; Western Normal Music School; Indiana School of Methods; Avon-by-the-Sea, Seaside Assembly; Deerfield Summer School of History and Romance; Indiana University Summer School; Seaside Normal Institute (Corpus Christi, Tex.); Lake Minnetonka Summer School; Blackboard School at Cedar Falls (Iowa); Springfield (Mass.) Summer School; Normal and Business College, Fremont, Nebr.; Mountain Lake Park (W. Va.) Kindergarten.

INTRODUCTION.

The history of a movement is rarely that of a steady progress. At varying intervals of time new forces come into play, new factors are introduced, and new epochs are inaugurated. In all history we recognize these milestones marking off and separating successive periods. In the history of educational development in the United States is to be discovered the same characteristic. Here, too, are found the milestones of progress, and one of the most recent of these is that which marks the development of summer schools as an element in the educational system of the country.

The importance of the summer school, and the work to be performed by it in promoting the increase of knowledge among the people, are facts easy of determination. The rapid spread of the summer school idea, as indicated by the establishment of new schools, and the increased attendance at old schools, proves the existence of a genuine demand on the part of the people for just such instruction as these institutions are able to afford. The widespread, and, if we may so call it, indigenous character of the demand, is further to be noted. Summer schools in the United States have not been copies of Old World methods, nor primarily as following the example of some one successful effort of the kind in this country. All over the country, and in almost every State of the nation these schools have sprung up spontaneously, as it were, and to supply local demands.

The work, to the performance of which the vacational school is especially adapted, is of three kinds:

First. There is the task of providing instruction for those persons desirous of adding to their intellectual attainments, but otherwise unable to obtain professional assistance in their studies. The instruction, when it has this object, is generally and of necessity popular in character and limited to those branches in which information of a fairly satisfactory nature can be obtained without the necessity of prolonged and continuous effort, and in which the advantages derived from an attendance at the summer session can be easily supplemented by reading, privately pursued. It is for these reasons that we find in the schools, whose attendance is largely of students of this class, the instruction, limited, as a rule, to such subjects as literature, social problems, general history, physical training, elocution, kindergarten, and the like. The work of the various Chautauqua assemblies is almost wholly of this first character, and to a greater or less extent this feature is present and controls the work of the other schools.

Second. The second advantage afforded by summer schools is the opportunity given university and college students of adding to their regular work either by way of making up deficiencies, or advancing further in favorite branches than the press of other work permits in the winter time. These sessions likewise afford students preparing for college the opportunity of obtaining lacking requirements for matriculation, and experience has shown that the number of students who do thus avail themselves of this privilege is very considerable.

Third. The third task that a summer institute of learning has demonstrated its ability to perform is that exemplified in the work of the schools of biology. This is work that can not be done at the university or college, and from its very character has to be performed at the seaside and in the summer. As will be pointed out in the chapter treating of these schools, here is presented to teachers the opportunity of

carrying forward private investigation in their own special fields, and to students the privilege of obtaining a direct knowledge of laboratory work and an insight into the methods of original work.

Fourth. The fourth advantage derived from the existence of summer institutes is to be found in the field of pedagogics. Several of the schools are devoted purely to instruction in the art of teaching, and in all of the larger institutions are departments of methods. Probably at the head of the schools devoted to work of this kind is the Martha's Vineyard Summer Institute, at which, I am told, that of the 600 in attendance at the last session more than 550 were teachers. At these summer schools professors in various institutions are able to make the personal acquaintance of each other, to exchange views, and to obtain opinions upon new methods of instruction. In addition to this, teachers are enabled to better equip themselves for their work by means of their own study and their association with minds more fully and more scientifically trained in their especial branches.

The foregoing description of the proper provinces of work for the summer schools has served also to define the advantages derived by the people from the establishment of these institutions. But, further than these, there are other and peculiar privileges afforded. First of all, there is presented the opportunity of personal relationship and contact between teachers and pupils. The recognition of and increase in the personal element in instruction is a distinct gain. The specific information contained in a lecture or class recitation may be small, but if there be created in the minds of the students a greater enthusiasm in the search for truth, a stimulus is given to future work, the importance of which it is not easy to overestimate. Again, the opportunity is given the student of concentrating attention upon a single favorite subject. Not only this, but in some of the better and larger schools the chance is presented of hearing the latest results of study in a particular field of knowledge as given not by a single lecturer, but by possibly a dozen of the leading professors, each dealing with his own special topic upon which he is an authority. Last, and not to be disregarded, is the opportunity afforded by summer schools of combining profit with pleasure, physical invigoration with mental development. With scarcely an exception, summer schools in the United States are located at pleasure or health resorts, many of them upon the seashore, others by the lakeside, and some in the heart of the mountains. At these institutions the elective principle receives its complete application. Studies are taken up, and courses of lectures followed, solely because the student is interested in those particular subjects. This of itself guarantees an attentive audience to the lecturer, and an interested class to the instructor.

Summer schools in nowise compete with or antagonize the college or winter school. They occupy fields which the latter cannot possess. Indirectly they benefit them. By diffusing and intensifying the desire for knowledge, they render more fertile the field from which the ordinary school and higher institution of learning derive their support.

The one serious indictment brought against summer schools is the superficiality or the "scrappy" nature of the instruction given. I think the charge is rather exaggerated. As has been already noted, so far as concerns schools that provide instruction for persons who are without scholastic training, and have not the time for prolonged and continuous study, the instruction must necessarily be of a popular character. Certainly it is neither complete nor profound. Yet, I think it scarcely a fair use of words to term this instruction superficial. The

word superficial has really two distinct meanings. In its purest connotation it means solely the opposite of profound. In common parlance, however, there is attached to this meaning a sense of pretense of profundity with an actual superficiality—that is to say, a hypocritical appearance of thoroughness. Unless limited to the first meaning the word is not properly used. Most of these schools recognize their own limitations. They appreciate that their instruction must be adapted to the shortness of their sessions, and that they must therefore deal with the general principles rather than the details of the arts and sciences. Yet if the schools properly and fully perform that which they assume to perform, the word superficial, with its common invidious meaning, is not justly applied.

The vital question, however, is this: Is not the instruction that is given in many cases unnecessarily general and unsystematic and disconnected? Can not this instruction be made more systematic, more substantial, and more useful, and yet be adapted to the abilities of the people, to the wants of whom these schools minister? There is undoubtedly room for improvement, and it would be strange if there were not. I think I see, however, the prospect of great betterment in the present rapidly spreading doctrines of proper university extension methods. Summer schools undoubtedly represent in their work the effort at attainment of the same end as that to which the "university extension movement" is devoted—namely, the wider diffusion of sound useful information among the people at large. The common method of instruction at these schools has been that of lectures, sometime in courses, but more often single. Good teachers have not been lacking. In the great majority of cases their teaching forces are composed of professors drawn from the faculties of the leading colleges and universities. As yet, however, these lectures and lecture courses have lacked frequently the very essentials that "university extension" leaders now insist upon. These are, the giving of lecture courses of considerable length upon some one subject, rather than the use of a large number of single lectures upon detached subjects; the use of printed syllabi, giving outlines of the lectures, bibliographies, and suggestions for private study; the encouragement of discussions at the end of every lecture; and the holding of written examinations at the termination of each course. The information obtained thus loses much of its "scrappy" nature, and is more complete; the student is stimulated in the discussions to independent thought, and encouraged to properly directed private reading by the syllabi.

With the spread of the "university extension" movement must come a fuller acceptance and application of its methods by the summer schools, which can not but greatly enhance the value of their work. For this reason, together with the fact that with the increasing intelligence of the people comes a growing demand for still greater enlightenment, one may safely predict for the summer school a future of expanding usefulness, and a growing importance among the educational methods of the country.

A description of the history, organization and work of these summer schools finds a legitimate and important place in a treatment of that movement, whose aim is the extension of higher education among the people. A treatment of this phase of university extension in the United States must, however, both from choice and necessity, be eclectic in character. The term "university extension" in its special connotation, as used in England, and of late in this country, designates a definite idea and purpose, and the development of the plans by which

this idea or purpose is to be effected has been definite and easy of description. With regard to the history of summer schools it has been otherwise.

In a general way the motives of the various summer assemblies, schools, colleges, and institutes of learning that have been established in this country have been the popularization of knowledge and the wider diffusion of higher education. But there has been no uniformity of organization, method, or scope of instruction. There has been no affiliation among them. Some have been mere summer sessions of collegiate institutions; others, semireligious gatherings; others have been private speculative undertakings; others, institutions established by learned societies or associations. Very many of these summer schools have had but an ephemeral existence, being born, flourishing, and dying in the course of a single summer. Others, of larger existence, have been migratory in character, changing their location from year to year. Some have been but the continuance of an older school under a new name, and others the result of the coalescence of two or more institutions. None, except the few "teachers' assemblies," have had connection with State systems of education, or have made reports to superintendents of education.

In scope and method of instruction there has been also the greatest diversity, ranging from the kindergarten to the laboratory for scientific investigation, and from instruction in a single branch to a curriculum containing a score of subjects.

For these reasons the task of preparing a corrected and complete history of summer schools in the United States is beset with difficulties. The task of obtaining the requisite information has been an especially arduous one. Though great diligence has been employed, the author has not been able to obtain in many instances that information which he desired.

In the following pages summer schools are grouped under special heads according to fundamental characters and aims. The larger, more important, and typical institutions will receive special consideration. In regard, however, to the amount of space devoted to each institution, it will not be possible to maintain in all cases a proper perspective, owing to the fact that in some instances schools deserving of considerable mention have afforded the author inadequate information.

The following are the groups into which I shall, for convenience, arrange the summer schools in the United States:

First: Schools for original research and for the training of specialists. The schools falling under this head are gatherings of investigators and specialists, rather than of students. Of teaching there is little, the especial attention being given to scientific investigation. The sole representatives of this class are the schools of biology, which embrace among their number the first permanent summer school in the United States, and with a sketch of the history of which this monograph begins.

Second. Summer schools giving instruction in single subjects. Under this head will fall the schools of philosophy, literature, ethics, languages, music, etc.

Third. Summer schools giving instruction in several branches. This class, according to my arrangement, includes a large number of instructions of a widely varying size and character. Their sessions usually last from two to six weeks, and the instruction is, for the most part, by lectures. Two of the schools under this head, "The Chautauqua

Assembly" and "The Martha's Vineyard Institute," will, on account of their size and importance, receive somewhat extended treatment in separate chapters.

NOTE.—Prominent among methods adopted by Americans for securing trained teachers and supplementing the work of normal schools have been the teachers' institutes. These institutes are gatherings of public school teachers for the discussion of methods of instruction, and as such meetings are almost universally held in the summer, a treatment of their work would naturally seem to form a part of this monograph. The whole subject, however, has been already thoroughly treated and published as a monograph by this Bureau (Circular of Information, No. 2, 1885), and the description of this subject will therefore not be duplicated here.

PART I.

SCHOOLS FOR ORIGINAL RESEARCH AND FOR THE TRAINING OF SPECIALISTS.

I.—SCHOOLS OF BIOLOGY.[1]

The summer school can hardly be termed a new factor in our educational system. As early as the summer of 1869 a dozen professors and students, chiefly from the scientific schools of Harvard University, made a trip to Colorado, where scientific results of considerable value were achieved. During the next four years parties of students, under the charge of Prof. Marsh and other Yale professors, made several expeditions to the region of the Rocky Mountains. The geological and mineralogical collections then secured were large and valuable, and are now deposited in the Museum of Natural History at New Haven. It was also the custom of Prof. Orton, of Vassar College, to spend a couple of weeks of the summer vacation with his pupils in different places of geological interest.

These were instances of educational instruction, but they can scarcely be dignified by the name of schools. The first idea of the establishment of a permanent summer school can probably be ascribed to Prof. N. S. Shaler, who first suggested to his colleague, Louis Agassiz, the establishment and maintenance during the summer of a seaside laboratory at Nantucket for the benefit both of university students and of teachers of science in secondary schools. The outcome of this suggestion was the establishment of the Anderson School on Penikese Island

ANDERSON SCHOOL ON PENIKESE ISLAND.

Few events in modern times have had a greater significance, and exerted a more profound influence upon the course of educational development in this country than the establishment of the Zoological Laboratory at Penikese, by Prof. Louis Agassiz. Just as in Europe seaside schools and laboratories may be traced to the example set and influence exerted by the famous International Marine Laboratory at Naples, so in America, most of the marine stations for biological investigation owe their origin to influences emanating from Penikese. Outgrowths of this latter school, itself of short continuance, are the several biological schools existing to-day, and which constitute the sole representatives of summer schools whose energies are devoted to research of an original character.

[1] In the preparation of the following history of schools of biology, I have derived great assistance from a paper kindly sent me by J. C. Campbell, professor of biology in the University of Georgia.

On the 14th of December, 1872, Prof. Agassiz issued the following circular:[1]

MUSEUM OF COMPARATIVE ZOOLOGY.
Cambridge, Mass., December 14, 1872.

Programme of a course of instruction in natural history to be delivered by the seaside in Nantucket during the summer months, chiefly designed for teachers who propose to introduce the study into their schools, and for students preparing to become teachers.

"Zoology in general and embryology of the vertebrates," by L. Agassiz, director of the Museum.

"The extinct animals of past ages compared with those now living and the methods of identifying them," by N. S. Shaler, professor of paleontology in the Lawrence Scientific School.

"Comparative anatomy and physiology of the vertebrates," by Dr. B. G. Wilder, professor of anatomy and physiology in Cornell University, Ithaca, N. Y.

"The animals and plants living in deep waters, and the peculiar conditions of their existence," by L. F. de Pourtales, assistant in the U. S. Coast Survey.

"Embryology of the radiates," by A. Agassiz, assistant in the Museum of Comparative Zoology.

"Natural history and embryology of the mollusks," by ———.

"How to make biological collections to illustrate the history of insects injurious to vegetation," by Dr. H. A. Hagen, professor of entomology in Harvard University.

"Natural history and embryology of the articulates," by Dr. A. S. Packard, professor of entomology in the Massachusetts Agricultural College.

"Natural history of the fishes and reptiles," by F. W. Putnam, general secretary of the American Association for the Advancement of Science.

"Natural history of birds and mammals," by J. A. Allen, assistant in the Museum of Comparative Zoology.

"On breeding, and nests and eggs of birds," by ———.

"Practical exercises in the use of the microscope," by ———.

"Instructions in drawing and painting of animals," by Paulus Roetter, artist in the Museum of Comparative Zoology.

"On fisheries and their management," by Prof. Spencer F. Baird, assistant secretary of the Smithsonian Institution.

"On fish breeding," by Theodore Lyman, assistant in the Museum of Comparative Zoology.

"The fauna of the North Atlantic, compared with one another, and with those of other parts of the world," by ———.

"The plants of the sea," by ———.

"The physics of the sea," by ———.

"Physical hydrography," by Prof. W. Mitchell, assistant in the U. S. Coast Survey.

"Chemistry of feeding and breathing," by Prof. W. Gibbs, Rumford professor of physics in Harvard University.

"Chemistry of the sea and air," by Prof. James Crafts, professor of chemistry in the Technological Institute, in Boston.

The terms of admission and the day of opening will be advertised as soon as all necessary arrangements in Nantucket can be made, including information concerning board, etc. A number of aquariums and the necessary apparatus to dredge in deep water will be provided. The superintendent of the U. S. Coast Survey and the U. S. Commissioner of Fisheries have promised their cooperation to the extent of their ability without interfering with the regular service of their departments. Profs. Shaler, Wilder, Packard, and Putnam, and perhaps others, may spend the whole, or nearly the whole, season in Nantucket, with a view to superintend the laboratory work, while the other gentlemen will stay there only part of the time, or as long as required by the share they are able to take in the course of instruction.

In behalf of the faculty of the Museum of Comparative Zoology in Cambridge, Mass.

L. AGASSIZ.

This was the initial prospectus of the first summer school in the United States. It has been given here *in extenso* on account both of its historic interest and its value as showing the nature of the work to be pursued and the names of the eminent men connected with the experiment.

[1] Report of trustees of the Anderson School, 1873.

For a time it seemed as though financial difficulties would prevent the accomplishment of the project, but by the generous gifts of Mr. John Anderson, of New York, sufficient support was obtained to guarantee the successful establishment of the school.

This gentleman, attracted by the appeal made by Prof. Agassiz to the legislature for State aid, offered as a location for the station Penikese Island, in Buzzards Bay, 25 miles southeast of Newport, R. I. It is the most easterly of the three western islands of the Elizabeth group, and contains about 100 acres of great fertility. For the purpose for which it was now donated it was admirably adapted. A few days later, Mr. Anderson, continuing his generosity, met some of the further practical difficulties of the organization by an endowment of $50,000 for the equipment and running expenses of the school.

Another friend presented a yacht of 80 tons burden for collecting purposes, and further contributions of money were received from other sources. A building was erected which offered large accommodations, there being fifty-eight lodging rooms on the upper floors. In 1873 this laboratory was thrown open and 43 students were attracted from all sections of the country, but in December of this year the death of the founder took place. During the following season the school was conducted by Prof. Alexander Agassiz, with an attendance of 46, but did not meet with the financial support that was anticipated, so the whole project was given up.

The establishment of this laboratory was the first consummation of a plan long cherished by its founder to provide students of marine animal life with a place where they might easily obtain their material, and at the same time enjoy the conveniences for study afforded by a well-arranged laboratory. It was the natural outcome of the conditions of biology in America at the time of its foundation. The early years of the present century were almost entirely taken up with the collection, description, and cataloguing of the plants and animals of the country, and investigators aimed at little more than this. Naturally the most conspicuous forms first attracted attention. Determination of names was regarded as the all-important thing, and the adult forms alone were usually made the subject of such study. Embryology was unknown, and the profound alterations which it has made in biological work were then scarcely dreamed of. So long as this was the case the establishment of a marine laboratory would not have been possible. Collecting grounds and a museum in which to store the objects collected were alone needed; a fixed location would have been a disadvantage.

With the advent of Prof. Agassiz, in 1846, the character of work done in America began to change, and in more recent times it has undergone a complete metamorphosis. Instead of being as it once was, the study of the external forms of animals, it has become a study of life itself. It has broadened out to embrace not only the study of animals now existing, but their past history; and it also includes as a part of its subject-matter many questions once generally regarded as beyond the reach of scientific methods.

In consequence of this, it has come about that new conditions for study are necessary New questions that arise demand new methods adapted to their solution. Biology has become more experimental than formerly. As the chemist constructs his own conditions to simplify the solution of the problems which fall within his province, so the biologist finds the conditions prevailing in the higher and better known animals too complex to be solved except in the same way. But nature has already furnished the simple conditions needed, for in the lower invertebrate

animals found in the sea, are represented in an elementary form all of the manifestations of life observed in those highest in the scale, while at the same time many of the structural peculiarities of higher animals are made plain only by comparison with these lower forms.

It is to the study of marine animals that we must look for the solution of many of the problems of biology, and it was perfectly evident to Agassiz that the entire life history of any animal must be known before there could be any real knowledge of its true relationships, and hence arose the necessity that the investigator should be so placed that he could collect his own material for study, and observe it under its natural conditions throughout its entire life. Visits to the seaside had of course been frequently made by investigators, and while these may have sufficed for the mere enumeration of supposed new species, they did not offer favorable conditions for embryological studies. When biology reached such a condition that this constituted the greater portion of the work to be done, the establishment of marine laboratories followed almost as a matter of course. Penikese would not have been possible many years earlier and indeed when established was almost premature. The magnetism of Prof. Agassiz held it together, and investigators came there largely that they might be thrown in contact with him. His enthusiasm aroused all those within its reach, but after his death appeals were made in vain for the continuance of the laboratory. The investigators of the country did not encourage the project, and the necessary funds could not be obtained. Prof. Alexander Agassiz even contemplated moving the laboratory to Wood's Holl where it would be more accessible and the fauna richer, but even then the sentiment was not sufficiently established. Investigators and students generally were not sufficiently convinced of its utility and practicability, and it was therefore temporarily abandoned.

Such were the circumstances under which were established the first marine laboratory and summer school in this country. Summer sessions were a necessity, both because many of those in attendance were teachers and unable to be present at other times and also because the advantages for collecting were greater at this season than at any other, and the needs of the investigator were mainly regarded. Since that time the movement has spread to include other departments of knowledge, and to furnish instruction of a more elementary character to those who could not be reached in any other way. The summer-school movement was warmly seconded at Harvard by Dr. Asa Gray. To meet the same conditions and accommodate the same class of students, he established a summer school in botany, in 1874, which continues to serve a useful purpose up to the present time.

SUCCESSORS TO THE PENIKESE SCHOOL.

The most direct successor of the Penikese laboratory was the private laboratory established by Prof. Alexander Agassiz at Newport, in 1877. This is noted for the elegance of its equipment, and for its many conveniences for work, but it can scarcely be classed among the summer schools of the country for the reason that it is private property, and open only to a limited number of workers upon special terms.

In 1876 a summer school of biology was opened at Salem, Mass., by the Peabody Academy of Sciences. It was under the direction of Profs. Packard and Kingsley, and was intended for beginners, as well as for advanced students. In 1881 it was discontinued.

THE CHESAPEAKE ZOOLOGICAL LABORATORY OF THE JOHNS HOPKINS UNIVERSITY.[1]

The first real revival of the Penikese idea was in 1878, when the trustees of the Johns Hopkins University made an appropriation to establish the Chesapeake Zoological Laboratory. Their idea in so doing was to make provision only for students sufficiently advanced to undertake original research. No building was erected, and indeed no permanent location was chosen, but the laboratory was moved from place to place as seemed desirable, the appropriation being sufficient to furnish all needed conveniences for work.

This laboratory was established as a branch of the biological department of the university, as an experimental seaside station for the study of the marine zoology of the Chesapeake Bay. The enterprise was conceived, organized, and conducted by Dr. W. K. Brooks, who has been connected with the university since it first opened in 1876, as associate in the biological department, of which Dr. H. N. Martin has been head.

The Secretary of War, at the instance of the late Prof. Henry and of Prof. Baird, granted the use of the incompleted Fort Wool, at the mouth of Hampton Roads. The fort is on an artificial island 6 acres in extent, made by dropping granite blocks into the water; it is 3 miles from one shore, half as far from the other, and 20 miles from the ocean. A strong current runs close to the walls of the fort, and thus carries 15 or 20 miles of water past its walls at each turn of the tide, so that free swimming animals and embryos were obtainable in endless variety without leaving the fort. Ten workers were at one time or another during the summer in attendance. A majority of them were connected with the university, the rest were school teachers. No lecture courses were given, but the work was so conducted as to accomplish four objects, viz, to furnish advanced students with opportunities for original investigation; to provide material for winter work in the university; to enable less advanced students to become acquainted with forms of life, which can only be studied at the seaside, and to give them an opportunity to become practically acquainted with the methods of marine zoology; and to increase scientific knowledge regarding the zoology of Chesapeake Bay. Though the laboratory was occupied only eight weeks during the first session, very considerable scientific results were reached, as is shown in the following list of published papers: Land Plants found at Fort Wool, N. B. Webster; List of Animals found at Fort Wool, P. R. Uhler; Development of Lingula, W. K. Brooks; Early Stages of Amphioxus, H. J. Rice; Lucifer Typhus, W. Saxon; Development of Gasteropods, W. K. Brooks; Development of Squilla, W. K. Brooks.

During the session of 1879, Dr. Brooks had with him at the Chesapeake laboratory eleven workers, several, as before, being from the university. The chief work of the session was the investigation into the development and habits of the oyster. The United States and Maryland fish commissions cooperated with the university toward the laboratory and dredging outfit. Seven weeks were spent at Crisfield, the center of the oyster trade of the eastern shore of Maryland, and four weeks were passed at Fort Wool. The paper embodying the results of the investigation into the nature and development of the oys-

[1] See reports of Trustees of Johns Hopkins University, Circular of Information No. 54, of the Johns Hopkins University, and N. Y. Tribune April 12, 1880, article, Summer Schools, by E. M. Hartwell, PH. D.

ter, with ten plates, may be found in the Report of the Commissioners of Fisheries for Maryland.

The sessions of 1880, 1881, and 1882 were spent at Beaufort, N. C., the situation of this town being especially favorable for zoological work, the surrounding waters presenting such a diversity of conditions that the fauna are unusually rich and varied.

In addition to the work of the Chesapeake Zoological Laboratory at Beaufort, a class of beginners was conducted during the summer of 1881 at Fort Wool, Va., by Dr. S. F. Clarke, of the biological department of the Johns Hopkins University. Instruction was given by means of lectures and also by daily collecting and observing the various animals in their native haunts. The lectures, twenty-seven in number, extended through the session. Eight students were in attendance.

The sixth year was spent at Hampton, Va. The appointment of Dr. W. K. Brooks by the governor of Maryland as commissioner to examine the condition of the oyster beds caused this removal, as he was compelled to spend much of the season in the Chesapeake Bay.

The seventh and eighth sessions of the laboratory were held at Beaufort.

In the summer of 1886 the laboratory was stationed in the coral island Abaco, the Bahamas, W. I., with a secondary station at Beaufort. The session of 1887 was held at Nassau, on the island New Providence, and during the following season on one of the Florida Keys. Financial reasons caused the laboratory to be discontinued during the next few years, but in the summer of 1891 a session was again held at Port Henderson in Jamaica, lasting fourteen weeks.

During the entire ten years of the existence of this laboratory it has been under the direction of Dr. W. K. Brooks. The sessions here lasted usually about two months, and the amount of work done has been very considerable. The published results of the work done at the seaside during these years number over one hundred titles. Thirty-four of these are books or illustrated papers; sixteen of them were originally published in England or Germany; and translations of forty-six of them have appeared in the zoological journals of England, Germany, and France. The fact that many of these results thus obtained have been incorporated into standard text-books attests the value of the work accomplished. The laboratory enjoys the distinction of having been the first marine laboratory successfully carried on in this country in which research of purely scientific value was made the ruling feature.

This laboratory was established primarily for the benefit of students already in attendance at the Johns Hopkins University and conducted in connection with the courses there given. No effort has been made to bring it into prominence as a separate organization.

ANNISQUAM AND WOOD'S HOLL LABORATORIES.

In the Annual Report of the Boston Society of Natural History for 1881 it is stated that "it has been considered desirable to found a summer laboratory sufficient to supply the needs of a class of persons who have begun to work practically under our direction, but have hitherto had no convenient means for pursuing their studies on the sea shore. * * * We are sure that such a laboratory is needed for a limited number of persons * * * about a dozen in all, but we are not sure of any real demand outside of these."

In 1881 a circular was issued announcing the opening of a marine laboratory at Annisquam, Mass. This was supported by the Woman's

Educational Association of Boston, together with the Boston Society of Natural History, and was designed "to afford opportunities for the study and observation of the development, anatomy, and habits of common types of marine animals under suitable direction and advice." In one respect this laboratory differed from both the Penikese and Chesapeake laboratories, viz, that students were received who were virtually beginners. Twenty-two of this class were present the first year, and although the number fluctuated in different years there were 26 present in 1886 when the laboratory ceased to exist. It had always been the policy of both the associations which shared the management of the Annisquam laboratory to give up any of their departments as soon as they were upon a firm basis, and any other institutions would accept and carry them on.

Both the society and the association have therefore felt, after six years of successful working, that the Annisquam laboratory had reached a stage of advancement when it could claim and perhaps receive sufficient aid from the patrons of science and learning to be placed upon an independent and permanent foundation. * * *

The Woman's Educational Association called a meeting, composed largely of representative teachers of biology, and the fate of the laboratory was surrendered to their deliberations. They decided that an effort should be made to establish a marine biological laboratory, and at least $15,000 should be raised to carry it on for five years.[1]

This effort was so far successful that in March, 1888, the Marine Biological Laboratory was chartered and the work of erecting a building at Wood's Holl, Mass., at once begun. Dr. C. O. Whitman was appointed director of the laboratory, with B. H. Van Vleck as instructor. Provision was made for investigators and students, and on July 17 the laboratory opened with 7 of the former and 8 of the latter class in attendance. During the first session the following subjects, among others, were studied in the department of investigation: The development of the lateral line system in the toadfish; the origin and history of Kupffer's vesicle in teleostean embryo; the structure of the sense organs in the pectoral fins of *Trigola;* the anatomy and embryology of Ascidians; the fecundation of the eggs of the sea-urchin.

The work in each case was of a preparatory nature, and designed to be carried forward at the next session. Attention was given almost exclusively to laboratory work, and only a few informal lectures on embryological subjects were given by the director. Prof. W. T. Sedgwick, on the invitation of the director, gave two public lectures upon insectivorous plants (especially the *Droseras*).

The work of instruction conducted by Prof. B. H. Van Vleck was confined chiefly to the study of the structure and life-history of invertebrate forms, such as the sponges, hydroids, ctenophores, worms, starfishes, sea-urchins, lobsters, crabs, etc. Mounted preparations added much to the value of the instruction. Considerable attention was given to the histological technique, and a large amount of valuable material for use in teaching was collected by each member of the class.[2]

As to the aim and purpose of this new instruction the director, in his opening address, said:

While this institution traces its historic roots to Penikese, and acknowledges, with pride, its community of descent with numerous summer schools of natural history, it has one feature that distinguishes it from all its predecessors, and on the development of this hangs every pledge of the future. In every attempt hitherto made to combine the two chief interests here represented, instruction has been the

[1] Annual Report Boston Society of Natural History, 1887, p. 4.
[2] First annual report of the Marine Biological Laboratory for the year 1888.

object of first concern. Now, the only way to keep the distributive function efficient and active is to unite it in proper relations with the productive function. The laboratory is the creative agent—the source of all supplies; the school is merely the receiver and distributor. Any attempt to combine the two which ignores or reverses these relations must end in disappointment and failure. The plan pursued must be one that will meet the approval, arouse the interest, and compel the cooperation and active support of the more progressive school of biologists. Our most distinguished zoologist declares, in a letter just received, *I have no sympathy with anything merely devoted to elementary instruction, and unless the greater part of the energy is given to original work, it is of no interest to me.*[1]

The report of the director for the second session (1889) showed a prosperous state of affairs. The number of investigators, teachers, and students in attendance during the session, as compared with the first session, showed an increase to nearly the full capacity of all the laboratories.

The following prospectus issued for the session of 1891 will show the present status of this work.

The corps of instructors for the fourth season (1891) consists of Dr. C. O. Whitman, director, professor of zoology at Clark University, and editor of the Journal of Morphology; E. C. Gardiner, Ph. D., instructor in zoology, Massachusetts Institute of Technology; J. Playfair McMurrich, Ph. D., docent in zoology at Clark University; T. H. Morgan, Ph. D., Bruce fellow, Johns Hopkins University; W. M. Wheeler, fellow in biology, Clark University; H. C. Bumpus, assistant professor of zoology, Brown University; W. M. Rankin, Ph. D., instructor in zoology, Princeton College; Ryoiche Takano, artist; G. M. Gray, laboratory assistant; J. J. Veeder, collector.

In addition to the regular courses of instruction in zoology, botany, and microscopical technique, consisting of lectures and laboratory work under the direct and constant supervision of the instructors, there will be two or more courses of lectures on special subjects by members of the staff. One such course of six lectures will be given by Dr. McMurrich on the *Ctenophora* and the *Turbellaria*. Similar courses on the *Mollusca*, *Crustacea*, and *Echinodermata* will be given by Prof. Bumpus and Dr. Rankin.

There will also be ten or more evening lectures on biological subjects of general interest. Among those who may contribute these lectures and take part in the discussions upon them may be mentioned, in addition to the instructors above-named, the following: Dr. H. Ayers, of the Lake Laboratory; Prof. B. H. Donaldson, Clark University; Prof. W. G. Farlow, Harvard University; Prof. J. S. Kingsley, University of Nebraska; Prof. W. Libbey, jr., Princeton College; Prof. C. S. Minot, Harvard Medical School; Prof. H. F. Osborn, Princeton College; Dr. S. Watase, Clark University; Prof. E. B. Wilson, Bryn Mawr College.

The laboratory is located on the coast at Wood's Holl, Mass., near the laboratories of the United States Fish Commission. The building consists of two stories—the lower for the use of students receiving instruction, the upper exclusively for investigators. The laboratory has aquaria supplied with running sea water, boats, a steam launch, collecting apparatus, and dredges; it is also supplied with reagents, glassware, and a limited number of microtomes and microscopes. The library is provided, not only with the ordinary text-books and works of reference, but also with the more important journals of zoology and botany, some of them in complete series.

The laboratory for investigators will be open from June 1 to August 29. It will be fully equipped with aquaria, glassware, reagents, etc., but microscopes and microtomes will not be provided. In this department there are fourteen private laboratories supplied with aquaria, running water, etc., for the exclusive use of investigators, who are invited to carry on their researches here free of charge. Those who are prepared to begin original work, but require supervision, special suggestions, criticism, or extended instruction in technique, may occupy tables in the general laboratory for investigators, paying for the privilege a fee of $50. The number of such tables is limited to ten. Applicants for them must state precisely what they have done in preparation for original work, and whether they can bring a complete outfit, viz., microscope, microtome, camera-lucida, etc.

For the completion of any considerable piece of investigation, beginners usually require from one to three full years. It is not expected, therefore, that the holders of these tables will finish their work in a single season. The aim is rather to make a safe beginning, which will lead to good results if followed up between sessions, and renewed, if need be, for several successive years. No applications for less than the whole session can be received in this department.

[1] Report of Marine Biological Laboratory, 1888, p. 28.

The laboratory for teachers and students will be opened on Wednesday, July 8, for regular courses of seven weeks in zoology, botany, and microscopical technique. The number admitted to this department will be limited to 30, and preference will be given to teachers and others already qualified. By permission of the director students may begin their individual work as early as June 15 without extra charge, but the regular courses of instruction will not begin before July 8.

More advanced students who may wish to limit their work to special groups will have an opportunity to do so. The regular course in zoology, under charge of Prof. Bumpus, will embrace a study of the more typical marine forms and elementary methods of microscopical technique. The laboratory work will be accompanied by lectures. The following is an outline of the course proposed: July 8–13, study of the lobster; July 13–20, (*a*) study of annelids (*Nereis, Serpula, Spirobis*, etc.), (*b*) *Balanoglossus* and *Phascolosoma*, (*c*) *Polyzoa*, (*d*) *Turbellaria;* July 20–27, study of the cœlenterates; July 27–August 3, study of the molluska (*Mya, Ostrea, Sycotypus, Loligo*); August 3–10, echinoderms (starfish, sea-urchin, holothurian, etc.); August 10–17, crustaceans (*Branchipus, Cyclops, Lernæa, Lepas, Idotea, Orchestia, Cancer*); August 17–26, vertebrates (*Amphioxus, elasmobranch, teleost*).

Arrangements for instruction in botany have not yet been completed, but it is hoped that Mr. Setchell will again be able to take charge of the work in this department.

Applicants must state whether they can supply themselves with microscopes and microtomes. Microscope slides, dissecting and drawing instruments, bottles, and other supplies, to be finally taken from the laboratory, are sold at cost. The tuition fee is $25, payable in advance.

A department of laboratory supply has been established in order to facilitate the work of teachers and others who desire to obtain materials for study or for classes. It is proposed to furnish, e. g., certain sponges, hydroids, starfishes, sea-urchins, marine worms, crustaceans, molluska, and vertebrates, in good condition at fair prices.

Wood's Holl, owing to the richness of the marine life in the neighboring waters, offers exceptional advantages. It is situated on the north shore of Vineyard Sound, at the entrance to Buzzards Bay, and may be reached by the Old Colony Railroad (two hours and a half from Boston) or by rail and boat from Providence, Fall River, or New Bedford.

No better proof of the usefulness of the laboratory can be given than the fact that in 1890 there were present 20 investigators and 27 students. These came from all sections of the country and the laboratory may truly be regarded as a national enterprise. It has been so conducted as to secure a general interest in its success on the part of the colleges of the country. The fact that instruction goes hand in hand with investigation, and that the most perfect cooperation among investigators is secured by means of lecture courses in which all take part, gives reason for the hope that the great productiveness which has thus far characterized the laboratory will be far eclipsed in the future, and that to the laboratory there will be generally conceded a distinguished place among the educational institutions of the country.

THE BROOKLYN INSTITUTE BIOLOGICAL LABORATORY.

The most recent addition to the number of seaside laboratories for the investigation of marine life is that opened in 1890, and conducted under the auspices of the Brooklyn Institute. The location of this station is at the head of Cold Spring Harbor, Long Island, a favorable situation for biological study.

The country around affords excellent hunting ground for every form of animal and vegetable life common to the climate. Just above the laboratory is a series of three fresh-water ponds, each fertile in its own peculiar forms of fresh-water life, and through which flows the water of Cold Spring Creek. Just below the laboratory is the harbor of Cold Spring, divided by a sandy neck into an inner and an outer basin. The inner basin is particularly rich in marine life, and the channel between the inner and outer basins has a varied and vigorous growth of algæ, mollusks, and echinoderms. The outer basin has rocky projections,

shallow flats, banks, and eel grass, sheltered pools, oyster beds, and other conditions favorable for collection and study. The outer basin opens into Long Island Sound, whose coast is varied in character for 20 miles in either direction.

The main laboratory occupies the first floor of the New York State Fish Commission building, and is a room 36 feet wide and 65 feet long, provided with ample light from every side. It is furnished with laboratory tables, aquaria, hatching-troughs, glassware, and all the apparatus and appliances required for general biological work. Into the laboratory is conveyed a bountiful supply of the water of the Cold Springs for use in the aquaria and troughs. This water is as pure as a crystal, has the same low temperature throughout the year, and is the water used so successfully by the New York State Fish Commission in hatching and growing salmon, trout, and other food fishes. The laboratory is also supplied with an abundance of salt water, which is pumped up from the harbor into a brick reservoir, from which it runs to the laboratory.

The station is provided with three small row boats and a naphtha launch, together with nets, trawls, and dredges, for use in collecting and dredging. Near the main laboratory is a photographic room, with a dark room and work room adjoining. Each student is provided with dissecting instruments, chemicals, and glassware, to be used in the dissection, preparation, and study of tissues. Microscopes are provided for those students who can not provide themselves with instruments.

The following general course was open during the session of 1891 to each student, and was under the direction of Prof. Conn. It consisted primarily of laboratory study of specimens illustrating the types of animal life. The practical work was accompanied by lectures giving an outline of systematic zoology, for the purpose of showing the relations of the forms studied to other animals. The lectures also touched upon various matters of general biological interest. The types studied in course were as follows: *Protozoa*, study of microscopic forms, including directions in the use of the microscope; (1) *Cœlenterata*, hydroids, including the study of jelly fishes and the development of hydroids; (2) *Echinodermata*, the star-fish; (3) *Bryozoa*, study of an adult Bryozoan; (4) *Mollusca*, the clam, the snail, development of the oyster or some other type; (5) *Crustacea*, the crab, with a study of its development; (6) *Insecta*, the grasshopper; (7) *Vertebrata*, dissection of the fish, dissection of the frog.

Accompanying this course of laboratory work and lectures was given instruction in methods of mounting objects and in the preparation of microscopic sections. Opportunity was also given for collecting and surface skimming.

A special feature of the laboratory this season was an extended course in the methods of bacteriological research. The course consisted of laboratory work on the culture and propagation of bacteria, identification of species, and of lectures and demonstrations by the director. Only those who were well prepared by previous study and experience in biological or medical work were admitted to the course.

Students who pursue the general course of instruction during the summer, and who have time for extra work, are given the instruction and facilities necessary to enable them to carry on special investigations, while those students who have already gained the knowledge and experience which is provided by the general course are permitted to give their entire time to special work.

The laboratory was opened for the season on Tuesday, July 7. The

regular session for students was continued from that date until Friday, August 28.

A good reference library is placed at the service of students, and a collection of algæ serves to guide students in marine botany. In addition to the regular lectures given in connection with the laboratory work, evening lectures occur two or three times a week, illustrated by the aid of a magic lantern. The lantern is provided with a vertical attachment and with large and small cells, in which forms of life may be placed and their structure exhibited on the screen. A microscopic attachment to the lantern enables lecturers to demonstrate points in minute anatomy, and a large collection of lantern slides of biological subjects furnishes the means for comparison of many allied forms and structures. The evening lectures are open to the public.

For the summer sessions of 1892 lectures are announced to be delivered by Profs. H. W. Conn, A. S. Packard, William C. Peckham, Henry T. Osborn, Bashford Dead, John B. Smith, B. D. Halstead, T. W. Hooper, Thomas Morong, A. M. Kirsch, Charles W. Hargett, H. L. Osborn, and Julius Nelson. It is expected, also, that other specialists will visit the laboratory during the summer and deliver lectures.

IMPORTANCE OF THE SUMMER SCHOOLS OF BIOLOGY.

The work that has been performed by these biological schools has been of a very valuable order, and the comparative prosperous condition of the institutions of this class now existing indicate a fruitful future. The methods of instruction followed have been of the most advanced character, and illustrate in its purest form the inductive laboratory method in education. In many instances the researches carried on or commenced at these stations have led to discoveries of great importance to the whole scientific world and to commerce as well. An instance of this is to be seen in the work of Prof. W. K. Brooks upon the oyster and its cultivation. At these several seaside stations teachers in various institutions have been afforded the opportunity of making the personal acquaintance of each other, of exchanging views, acquiring new methods, and generally deriving encouragement and stimulation in their work. Younger students have likewise been able to obtain a personal help from the different professors, and to obtain an insight into proper methods of original research, not to be obtained at the university or college.

Perhaps it would not be too much to say that to the influence exerted by these summer schools of biology is due, more than to any other one cause, the rapid progress that recent years has witnessed in the teaching of biology in the United States.

PART II.

SUMMER SCHOOLS GIVING INSTRUCTION IN SINGLE SUBJECTS.

I.—SCHOOLS OF PHILOSOPHY, LITERATURE, AND ETHICS.

I have made my second group of summer schools include those giving instruction in single branches of knowledge. Principal among the schools embraced under this head are those where instruction has been limited to the so-called "culture sciences," to philosophy, literature, and ethics. As in our treatment of the schools of biology, we were able to trace the establishment of them all, more or less directly, to the influence exerted by the Penikese school, so in our description of the schools falling within the scope of this chapter we shall find, in a degree, the same general influence exerted by the first established school of their class—the Concord Summer School of Philosophy.

THE CONCORD SUMMER SCHOOL OF PHILOSOPHY AND LITERATURE.

The Concord Summer School of Philosophy and Literature occupies a unique and important place in the history of educational experiments of the United States. The aim of this school, which for ten successive summers met at Concord, its first session being in 1879, was "to bring together a few of those persons who, in America, have pursued or desire to pursue the paths of speculative philosophy, to encourage these students and professors to communicate with each other what they have learned and meditated, and to illustrate, by a constant reference to poetry and the higher literature, those ideas which philosophy presents. The first purpose of the school was conversation on serious topics, the lectures serving merely as a text for discussion, while dispute and polemical debate were avoided. It sought in the discussions at Concord, not an absolute unity of opinion, but a general agreement in the manner of viewing philosophic truth, and applying it to the problems of life."[1] No lecturer was supposed to conform his ideas to what was said by others, and there was no "Concord school" of philosophy, except that the lecturers generally agreed in an utter repudiation of materialism, and in maintaining the existence of a personal, self-conscious, spiritual cause above the material universe.[2]

The genesis of a school of this character can be traced back to an idea conceived by Amos Bronson Alcott in 1842, but the materialization of this hope did not come until many years later. In 1878, the visit of Dr. Jones, of Illinois, and the conversation with him, suggested to Mr. Alcott that the time had at last come for realizing his long-felt desire for a conversational school of philosophy and literature to be established in his own town. Accordingly, in the spring of 1879, under the advice and with the cooperation of Ralph Waldo Emersom, the late Prof. Pierce, of Harvard University, Mrs. Cheney, Dr. W. T. Harris, and other friends of Mr. Alcott, the public were invited to the first session of the school, which was opened in Mr. Alcott's study, at the "Orchard House," now the residence of Dr. Harris. Later sessions were held in the "Hillside House," a building erected for this purpose a few steps from the "Orchard House." The officers of the school were: Mr.

[1] Preface to Genius and Character of Emerson, published by the school.
[2] Introduction to Concord lectures on philosophy, 1882.

A. B. Alcott, dean; Mr. S. H. Emery, jr., director; and Mr. F. B. Sanborn, secretary. These three, with Dr. Harris and Dr. H. K. Jones, constituted the faculty.

The attendance much exceeded the expectation of the faculty, although the season was much longer than was afterwards found expedient, the term being six weeks. The chief lecturers were five in number, occupying the five week days before Saturday, which was given up to single lectures on general topics. During the next three years the sessions were five weeks; in 1882 and 1883, four weeks; and after that two weeks only. The whole number present at the first session was nearly 400, of whom about one-fourth were residents of Concord.

The last session of the school was held in the summer of 1887. The best idea of the work done by this school, its character, the variety of subjects considered, and the eminent men who there elaborated their philosophies, can be gained from the following abridged programme of the courses and lectures for the several years.

FIRST YEAR'S PROGRAMME, 1879.

Mr. A. Bronson Alcott, 10 lectures on "Christian theism."
Dr. William T. Harris, 10 lectures on "Speculative philosophy."
H. K. Jones, 10 lectures on "Platonic philosophy."
D. A. Wasson, 10 lectures on "Political philosophy."
Mrs. Ednah D. Cheney, 10 lectures on "The history and moral of art."
Special lectures were given by Mr. Ralph Waldo Emerson, Prof. Benjamin Peirce, Mr. Thomas Wentworth Higginson, Mr. Thomas Davidson, Mr. F. B. Sanborn, Rev. Dr. Cyrus A. Bartol, and Mr. Harrison G. O. Blake.

SECOND YEAR'S PROGRAMME, 1880.

Mr. A. Bronson Alcott, 5 lectures on "Mysticisms."
Dr. H. K. Jones, 5 lectures on "The platonic philosophy" and 5 on "Platonism in its relation to modern civilization."
Dr. W. T. Harris, 5 lectures on "Speculative philosophy" and 5 on "History of philosophy."
Rev. J. S. Kedney, D. D., 4 lectures on "The philosophy of the beautiful and sublime."
Rev. William H. Channing, 4 lectures on "Oriental and mystical philosophy."
Special lectures by Mrs. Ednah D. Cheney, Mrs. Julia Ward Howe, Mr. John Albee, Mr. F. B. Sanborn, Dr. Elisha Mulford, Mr. H. G. O. Blake, Rev. Cyrus A. Bartol, Rev. Andrew P. Peabody, Mr. R. W. Emerson, Rev. Dr. F. H. Hedge, and Mr. David A. Wasson.

THIRD YEAR'S PROGRAMME, 1881.

Mr. A. Bronson Alcott, 5 lectures on "The philosophy of life."
Dr. W. T. Harris, 5 lectures on "Philosophical distinctions," and 5 on "Hegel's philosophy."
Dr. H. K. Jones, 5 lectures on "The platonic philosophy," and 5 on "Platonism in its relation to modern civilization."
Mr. D. J. Snider, 5 lectures on "Greek life and literature."
Special lectures by Mrs. Julia Ward Howe, Mrs. Ednah D. Cheney, President John Bascom, Prof. G. S. Morris, Mr. F. B. Sanborn, Dr. Elisha Mulford, President Noah Porter, and others.

FOURTH YEAR'S PROGRAMME, 1882.

Mr. A. Bronson Alcott, 4 lectures on "The personal, general, and individual mind."
Dr. Harris, 5 lectures on "The history of philosophy;" 3 on "Fichte's philosophy," and 2 on "Art."
Dr. Jones, 8 lectures on "Christian philosophy."
Dr. Kedney, 3 lectures on "Hegel's aesthetics," and 1 on "The philosophy of Ferrier."
Mr. F. B. Sanborn, 3 lectures on "Oracular poetry."
Prof. John Watson, 3 lectures on "Schelling."
Special lectures by Miss E. P. Peabody, President Porter, Mrs. Julia Ward Howe, Mr. G. P. Lathrop, Mr. Alexander Wilder, Rev. Dr. McCosh, and others.

FIFTH YEAR'S PROGRAMME, 1883

Dr. Harris, 8 lectures on "Elementary lessons in philosophy."
Dr. G. H. Howison, 4 lectures on "Kant."
Prof. William James, 3 lectures on "Psychology."
Dr. D. J. Snider, 4 lectures on "Homer and the Greek religion."
Dr. Kedney, 2 lectures on "Art appreciation and the higher criticisms."
Mr. F. B. Sanborn, 4 lectures on "New England philosophers."
Special lectures by Mr. Julian Hawthorne, Miss E. P. Peabody, Mr. John Albee, Rev. Dr. Bartol, Mrs. E. D. Cheney, Mr. E. D. Mead, Mrs. Julia Ward Howe, Mr. David A. Wasson, Mr. Lewis J. Block, and Mr. H. G. O. Blake.

SIXTH YEAR'S PROGRAMME, 1884.

Readings from Mr. Alcott's "Diary and correspondence."
Fourteen lectures by various speakers, on the "Genius and character of Emerson."
Five lectures on Immortality, by various speakers.

SEVENTH YEAR'S PROGRAMME, 1885.

I. Goethe's Genius and Work; 18 lectures by various speakers.
II. A Symposium: Is Pantheism the Legitimate Outcome of Modern Science?
Lectures by Rev. Dr. A. P. Peabody, Mr. John Fiske, Dr. Harris, Dr. G. H. Howison, Dr. F. E. Abbott, and Dr. Montgomery.[1]

EIGHTH YEAR'S PROGRAMME, 1886.

I. Dante and His Divine Comedy; 12 lectures and conversations.
II. Plato's Philosophy; 12 lectures by various speakers.

NINTH YEAR'S PROGRAMME, 1887.

The subject of the lectures in 1887 was "Aristotle and His Philosophy in its Relation to Modern Thought." There were three courses—two general and one special. The first, given in the mornings of the session, dealt with Aristotle's philosophic system as a whole, and endeavored to give a complete account of it, its origin and influence, and to determine as far as possible the points of identity and difference between it and the thought of recent times, since Bacon, Descartes, and Locke. The other general course treated of Aristotle's art doctrines, and particularly of his dramatic theory, comparing it with modern theories. The special course, or "symposium" was devoted to ontology, how far such a science is possible, and its effect upon science, ethics, art, and religion. At this session, in addition to the 12 morning and 10 evening lectures on Aristotle and the papers on ontology, there were discussed by the advanced students 26 general topics on the influence of Aristotle's writings, his æsthetics, and his theory of cognition and ontology.
The sessions lasted during the month of July, 1887.

TENTH YEAR'S PROGRAMME, 1888.

This session, the last of the Concord School, lasted but one day, and was devoted to an Alcott memorial service. The exercises consisted of a biographical address by F. B. Sanborn; a lecture upon "The philosophy of Mr. Alcott," by W. T. Harris, and remarks and reminiscences by various speakers.

In some respects the Concord Summer School of Philosophy stands for the highest development of the extra-university method of instruction. At Concord were gathered the leading thinkers in speculative philosophy, and through their lectures and the attendant discussions were opened up and traced the paths along which modern philosophic thought was tending. Old-World systems of thought, both new and old, were considered and interpreted in the light of the nineteenth

[1] Lectures on Pantheism appeared in the Journal of Speculative Philosophy for October, 1885, except Mr. Fiske's "Idea of God."

century's learning. The following quoted paragraph shows the important task to the performance of which this school applied itself:

> Exactly what we are about, what is the value of our civilization, and toward what ideals we are working, are things not so clear as they might be, and there is great need of keener analysis and more careful thinkers to prevent our drifting blindly—to prevent, that is, not by obstructive conservatism, but by progressive comprehension. To educate for this purpose, then, is another object of the school. In order to know what to teach and what to receive we must seek through philosophy the one central principle on which the world—the universe—rests. Then we have to trace this back again from that, through all its manifestations in religion, governments, literature, art, science, and manners. This is manifestly a large job, and the Concord School does not expect to carry it out so that it will never have to be done again, but rather to set people in the right path, so that they can keep on doing it forever. At a time when Germany is overpowered by the influence of Mill, Spencer, and Darwin, and the genius of materialism is getting so strong a hold everywhere, it is interesting to find that the Concord School reasserts with breadth and penetration the supremacy of the mind. * * * But it must not be supposed that the school is hostile to science; on the contrary, it approves and heartily sympathizes with it in its great work, which, properly regarded, it considers tributary to the highest ends of existence.[1]

Several of the lectures read at the Concord School have been published. In 1882 was issued a volume entitled Concord Lectures on Philosophy,[2] comprising outlines of all the lectures during the session of 1882. In 1884 was published by the school a volume containing all essays and poems read in the special course of 1884 on "The Genius and Character of Emerson."[3] The lectures upon Goethe have also been published under the title of "The Life and Genius of Goethe."[4] Mr. John Fiske's lectures on "The Destiny of Man," and on "The Idea of God," have also been printed as separate volumes by Houghton, Mifflin & Co. A large number of the single lectures have also appeared in reviews and other periodicals

For several years now this school has been closed. Its sessions were discontinued, not because of lack of success, for its promoters considered that their efforts had been rewarded to a greater extent than they had anticipated. It was believed that the task for which the school had been established had been performed. The foremost thinkers of the time and of the country had been gathered together, had mutually stimulated each other by lecture, discussion, and conversation, and the present position of philosophic thought had been clearly enunciated. The day may come when we will recognize that by these discussions the thought of the time was appreciably influenced and that through these teachings a service was performed in stemming, or at least giving a higher and proper interpretation to, the materialistic tendencies of the age.

The influence exerted by the Concord School resulted in the establishment of several other educational experiments following somewhat the same methods, and occupying to an extent the same field.

THE GLENMORE SCHOOL FOR THE CULTURE SCIENCES.

After the closing of the summer school at Concord, the idea was taken up by Mr. Thomas Davidson, the exponent and translator of the Italian philosopher, Antonio Rosmini, and for a few years there was conducted by him at Farmington, in Connecticut, a meeting similar to that which had been held at Concord. Farmington appearing somewhat ill situated for the purpose, the locality of the school was changed

[4] Ticknor & Co., pp. 479, $2.

to the little town of Glenmore, situated in the very heart of the Adirondacks. The culture sciences, to which the school is devoted, have for their subject (the programme explains) "man's spiritual nature, his intelligence, his affections, his will, and the modes in which these express themselves. Culture includes a history, a theory, and a practice, a certain familiarity with which must be acquired by every person who seriously desires to know his relations to the world, and to perform his part worthily therein. The aim of the school, therefore, is twofold—(1) scientific, (2) practical. The former it seeks to reach by means of lectures on the history and theory of the culture sciences, and by classes, conversations, and carefully directed private study. The latter it endeavors to realize by encouraging its members to conduct their life in accordance with the highest ascertained ethical laws, to strive after 'plain living and high thinking,' to discipline themselves in simplicity, kindliness, thoughtfulness, helpfulness, regularity, and promptness."

The following programme of the work of the session of 1892 illustrates the character and scope of the instruction given at this school:

The following gentlemen will give instruction in the subjects appended to their names:

(1) Prof. J. Clark Murray, LL. D., of McGill University, Montreal, Canada. (July 16 to end.)
- A. "The Philosophy of Kant: (*a*) The man and his time; (*b*) His problem; (*c*) Its solution in (*α*) Speculative, (*β*) Practical, and (*γ*) Æsthetic science" (6 lectures).
- B. "The evolution of knowledge, with special illustrations from the perceptions of sight, and special application to the general theory of the evolution of nature" (6 lectures).
- C. "Social morality: A discussion of living problems with regard to the determinate obligations of justice and the indeterminate obligations of benevolence" (6 lectures).

(2) Hon. W. T. Harris, LL. D., United States Commissioner of Education, Washington, D. C. (Latter half of July.)
"The philosophy of A. Bronson Alcott, R. W. Emerson, and the New England transcendentalists" (3 or 4 lectures).

(3) Prof. John Dewey, PH. D., of Michigan University. (All the time.)
"Tendencies of English thought during the nineteenth century."
- A. Rousseau: The influence from France.
- B. Gœthe and Kant: The influence from Germany.
- C. Bentham and Mill: The new liberalism.
- D. Newman and the Oxford movement: The new conservatism.
- E. Carlyle: The conflict.
- F. Emerson: The hope.

(4) Prof. Josiah Royce, PH. D., of Harvard University. (July 20–29.)
"Some recent tendencies in ethical doctrine and their outcome."
- I. Introduction: Kant's "Categorical imperative".
- II. The law of love in recent ethics; Schopenhauer; the utilitarians; the philanthropic spirit."
- III. The "law of the healthy social order," Spencer, Von Ihering, Wundt, Paulsen."
- IV. Tolstoï and the "Invisible moral order" in recent ethics.
- V. The evolution of the moral consciousness.
- VI. The authority of conscience.

(5) Mr. Max Margolis (of Wilna, Berlin, and Columbia College), PH. D. (All the time.)
"Jewish literature from the close of the Scripture canon to the close of the Talmud (B. C. 100–A. D. 600)." (Fourteen lectures.)

(6) Mr. A. J. Léon (Ibn Abi Suleimân, of Berut, Paris, and Johns Hopkins University), PH. D. (All the time.)
- A. "The Qorân" (2 lectures).
- B. "Primitive history and religion of Arabia, and the rise and development of Islam" (6 lectures.)
- C. "Manners and customs of the modern East, illustrative of biblical antiquity" (6 lectures).

(7) Mr. Thomas Davidson. (All the time.)
A. "Greek philosophy from the death of Aristotle to the rise of Islâm (B. C. 322–A. D. 611), and its influence on Christian Teaching."
B. "Æschylus's Oresteia and Shakespeare's Hamlet.—A comparative study, philosophical, æsthetic, religious, and ethical, of the Principles of the Greek and English dramas."
C. "The Kingdom of God. Christianity and its relation to Judaism.—An exposition of the Epistle to the Hebrews." (Sundays.)
(8) Mr. Louis J. Block, of Chicago. (In August.)
"The philosophy of literature" (3 or 4 lectures).

Besides these gentlemen, several others are expected to lecture from time to time, and, if there be a sufficient demand, classes will be formed for the study of Greek, Latin, Arabic, Hebrew, Syriac, Italian, Anglo-Saxon, and Icelandic.

Mr. A. L. Léon, PH. D., will give daily lessons in French, and Mr. Max Margolis, PH. D., and Miss Rota Knorr, in German, conversationally or otherwise.

Direction in private study will be given from the middle of May to the middle of October, and students will be received during all that time; but the school proper will begin on July 1 and end on August 31, lasting nine weeks.

CHICAGO KINDERGARTEN COLLEGE LITERARY SCHOOL.

Since 1889 there has been conducted, each year, under the auspices of the Chicago Kindergarten College, a session of a literary school. At each of these sessions, held either at Easter or Christmas holiday season, there have been courses of lectures on some one great man of letters. The prime mover in this school has been Mr. Denton J. Snider, the author of A Commentary on the Shakespearean Drama, A Commentary on Goethe's Faust, Commentary on Homer, and A Walk Through Hellas. The session of 1892, held at Easter time, was devoted to Dante. Ten lectures were given by Mr. Snider, Prof. Thomas Davidson, Dr. David Swing, Rev. Martin R. Vincent, and others.

The method of the literary instruction given at these several sessions has been the same as that followed by Mr. Snider in his numerous works. The masterpieces of literature have been studied, each as an organic whole. Their structure and motives have been examined, the constituent parts separated and described, and the bearing of each part upon the other explained. Thus, there has been delineated at once the organic unity of the author's production and the manner in which each member and organ has been made to play its proper part in contributing to the symmetry and purpose of the whole.

MILWAUKEE LITERARY SCHOOL.

Imitative, also, of the methods followed at Concord, was a course of lectures on "The poetry and philosophy of Goethe," given before the Milwaukee Literary School in August, 1886. These lectures and the extempore discussions evoked by them were phonographically reported and have been published in bound form.[1] The lectures, among others, included the following: "Goethe's Wilhelm Meister as the gospel of culture," by Commissioner W. T. Harris; "Goethe as a scientist," by James MacAlister; "Goethe's relation to English literature," by Mr. F. B. Sanborn; "The Divine Comedy and Faust," by Mrs. C. K. Sherman; "The mythology of the second part of Faust," by Prof. D. J. Snider; "The elective affinities," by Mrs. M. A. Shorey; and "What is most valuable to us in German philosophy and literature," by W. T. Harris.

That which impressed the writer most, when reading the report of this course of lectures, even more than the value of the lectures themselves, was the value of the discussions that were evoked. This

[1] S. C. Griggs & Co., Chicago, 1887. Edited by Marion V. Dudley.

value clearly indicates the wisdom of the leaders of "University Extension" in appending this educational feature to all their courses. By this means, not only are the lectures broadened in their scope, and the application of the doctrines enunciated indicated, but also vague or misunderstood statements of the lectures explained or qualified.

THE SCHOOL OF APPLIED ETHICS AT PLYMOUTH.

This is one of the latest experiments in summer instruction, and from the uniqueness of its scope and the success it obtained at its first session is deserving of a somewhat extended notice. The following sketch of this school is extracted from the Review of Reviews for September, 1891: "In many respects the most noteworthy of the new special summer schools inaugurated in 1891 has been that of 'Applied Ethics,' at Plymouth, Mass., in session from July 1 to August 12. The term 'applied ethics' might not carry to all minds an accurate or complete idea of the scope of the school. Possibly the words 'practical sociology' would be more truly expressive of the character of the work that was actually done at the first session. The history and progress of mankind and of communities in matters of religious belief, moral doctrine and practice, and in economic life and welfare were the general themes which were presented and discussed in many topics and phases."

Prof. Felix Adler must be regarded as the founder of the school. It was widely advertised; but its modest announcements resulted in the assemblage of a considerable body of modern pilgrims at Plymouth. Clergymen, teachers, students, workers in various fields of philanthropy, and cultivated men and women of different professions, or of no profession, made up audiences which the lecturers found it a pleasure to meet.

Prof. Henry C. Adams, of the University of Michigan and of the Interstate Commerce Commission, was the director of the department of economics. The plan of the department called for three lectures a week by Prof. Adams, as the backbone of the course, dealing methodically with the history of industrial society and economic doctrine, principally in England and America, and tracing the rise of the conditions in the world of labor that are the themes of so much present-day discussion and anxiety. Parallel with this broad and consecutive course of lectures, dealing with economic progress as a philosophic whole, were groups of special lectures upon practical topics. As a rule there were three lectures in each group. Thus Prof. John B. Clark, of Smith College, discussed modern agrarianism, including talks upon the single-tax movement and the Farmers' Alliance. Mr. Albert Shaw's course treated of social questions suggested by the crowding of cities, including housing and transit, slums and pauperism, Gen. Booth's "Darkest England" project, and London movements for the practical instruction of the masses. Prof. Taussig, of Harvard University, lectured upon cooperation, describing most instructively British distributive cooperation, German cooperative credit banks, profit-sharing, and productive cooperation in Europe and America, and workingmen's insurance projects. Factory legislation was discussed by Mr. Carroll D. Wright, the United States Commissioner of Labor. President Andrews, of Brown University, gave a course upon socialism, stating the socialists' complaint, explaining the socialistic remedy, and suggesting what he himself believed to be better ways of social reform. Prof. Edmund J. James, of Philadelphia, discussed educational questions at home and abroad. In connection with the economic lecture

courses, Mr. Katzenstein conducted a daily class in the principles of political economy.

A second department of the school was that of the history of religions, conducted by Prof. Crawford H. Toy, of Harvard University, with whom were associated a group of accomplished scholars. Prof. Toy's course of 18 lectures, dealing with the history of religions as a science, explaining its aims and methods, was the basis of the work in this department, and was of the highest interest and value. Its classifications, historical reviews, examinations of religious systems—ancient and modern, and analyses of the relations of religion to government, society, ethics, art, and philosophy, were a strong groundwork for the special courses. Prof. Maurice Bloomfield, of the Johns Hopkins University, lectured upon the origin, doctrines, and ethics of Buddhism. Prof. George E. Moore, of Andover Theological Seminary, gave the course on "Islam," discussing the beginnings, the formative period, and the ruling ideas of Mohammedanism. Prof. Morris Jastrow, jr., of the University of Pennsylvania, lectured upon the Babylonian-Assyrian religion—the gods, spirits, and beliefs of the Babylonians and Assyrians, their religious literature, and the relations of their culture to their religion. The course upon "The Greek religion" was given by Prof. B. I. Wheeler, of Cornell University, who explained its general characteristics and its ritual, and set forth the Homeric beliefs concerning the soul. Prof. G. L. Kittridge, of Harvard University, discoursed of the gods and the religious system of the Norsemen, under the general topic of "The Scandinavian religion." Finally, Mr. W. W. Newell, of the Journal of American Folklore, lectured upon "The religion of the laity in the Middle Ages."

The third department of the school, that of ethics, was under the immediate direction of Prof. Adler, of New York, whose course of 18 lectures, developing a system of applied ethics, with special reference to the moral instruction of children, extended through the six weeks. In Prof. Adler's department, Dr. Charlton T. Lewis, of New York, gave a course upon criminals, and the State dealing with the theories of penal legislation, the history of prisons, and the progress and prospect of prison reform. Prof. J. B. Thayer, of the Harvard Law School, and Mr. Herbert Welsh, of Philadelphia, gave lectures upon the Indian question, Mr. Thayer discussing its legal aspects and Mr. Welsh summarizing its history and politics and the prospects of reform. Mr. John H. Finley, of the New York State Charities Aid Society, presented a course upon the organization and method of charity in cities. Prof. Robert E. Thompson, of the Pennsylvania University, under the theme of "Politics and ethics," spoke of the moral aspects of patriotism, party, and international relations. Other courses in this department were by Mr. W. M. Salter, of Chicago, upon "Ethical theory;" Mr. W. L. Sheldon, of St. Louis, upon "Reform movements among workingmen;" Prof. W. E. Sheldon, of Boston, upon "Humane treatment of animals," and Dr. E. G. Hirsh, of Chicago, upon "The ethical ideal in education."

The lectures were given in the old high school of Plymouth, a building now nearly a century old. The daily programme interwove the departments, no 2 lectures being given at the same hour, and none of the departments had a body of exclusive adherents. Receptiveness, breadth, and tolerance marked the entire work of the school. The series of Sunday afternoon addresses, by representatives of different religious creeds, was popular and instructive. At one time or another during the six weeks over 200 students, representing 20 States and the Dominion of Canada, were in attendance. Of this number about 30

were clergymen, 40 teachers, 20 lawyers, physicians, newspaper men, and women, etc., and a number of college professors and instructors.

The success of this initial season certainly justifies the expectation that the school will become a permanent institution. Twenty years ago it could scarcely have been possible; and even ten years ago the encouragement for its maintenance would have been comparatively slight. But the times and their needs have changed. A host of practical questions of ethical import confront our American society with a distinctiveness that compels recognition, and their study in annual summer conferences at Plymouth, in a scientific and impartial spirit, can but serve a useful purpose.

The second annual session of the School of Applied Ethics opened at Plymouth, Mass., July 6, 1892, and continued six weeks. The following is the general announcement of the courses of lectures that were given:

(*1*) *Economics.*—In this department there will be the following courses: "Changes in theory of political economy since Mill," Prof. H. C. Adams; "Theory of social progress," Prof. F. H. Giddings; "Function of philanthropy in social progress," Prof. F. W. Taussig; "Statistical presentation of industrial and social questions," Hon. Carroll D. Wright; "Critical study of the labor problem and the monopoly problem," Prof. H. C. Adams.

(*2*) *History of religions.*—In this department the week-day lectures will be devoted to the study of the religious ideas of the Hebrews. There will be six courses of 5 lectures each, as follows: "The Prophets," Prof. Moore; "Persian influence on Judaism," Dr. Jackson; "The ritual law," Prof. Jastrow; "The Psalms," Dr. Peters; "The wisdom books," Prof. Toy; "The Talmud," Dr. Hirsch. The Sunday afternoon lectures will deal in general with the relation of religion to the social questions of to-day.

(*3*) *Ethics.*—The principal course in this department will be given by William Wallace, M. A. It will consist of 15 lectures on "Variations of the moral standard," illustrated by the "History of ethical theories." The shorter courses will probably include an historical treatment of the "Relation of church and state," by Prof. Burgess; The temperance question," "The idea of justice," and "The moral evolution of our political institutions."

II.—SCHOOLS OF LANGUAGES, MUSIC, ORATORY, EXPRESSION, AND OF PHYSICAL TRAINING.

THE SUMMER SCHOOL OF LANGUAGES AT AMHERST COLLEGE.

The Amherst summer school was established in 1877 by Dr. L. Sauveur, with the cooperation of members of the faculty of the college. In 1883 Dr. Sauveur retired and established a school at Burlington, Vt., since which time the Amherst school has been under the direction of Prof. William L. Montague. The fundamental idea of this school, as expressed in its last announcement, has been "to furnish the best instruction in different departments at the least possible expense to the pupils, and, especially in French and German, to establish a sort of foreign society pervaded by such a linguistic atmosphere that everyone who enters it, even as a spectator, shall be inspired with new vigor and enthusiasm in language studies." It has been the aim of the school to supply the wants of the following classes of students:

First. Teachers, especially American teachers of foreign languages, who desire to gain hints and suggestions on the latest and best methods of teaching those languages.

Second. Professional and business men and women who would like to devote a brief vacation to the study of the humanities; "those who enjoy mental culture and literary society while seeking recreation amid rural scenes of great natural beauty."

Third. Students who desire to begin the study of a language or to make up deficiencies, or to gain greater familiarity with languages. The amount of study is optional. In French and German there are 3 or 4 professors in each language, each teacher having usually 3 classes, thus giving a variety of instruction adapted to the wants of students of different grades of proficiency. The instruction is based on the oral or inductive method.

The morning is devoted to recitations, the afternoons and evenings to lectures and gymnastics or recreation; Saturday to picnics and excursions. Thus are spent the five weeks that constitute the duration of the summer term.

This school has now held 15 consecutive sessions. Since beginning the scope of the instruction has been gradually enlarged, and some subjects other than the languages taught. During the last session there were 22 teachers and lecturers, arranged in 12 departments. The attendance was over 200. The 12 departments were as follows: French, German, Greek and Latin, Italian, Spanish, English literature, art, physical education, chemistry, Anglo-Saxon and early English, library economy, and mathematics. The extent to which this school has, by the above showing, gone outside of the languages in its instruction might seem to render improper classification under the head of schools giving instruction in one department of knowledge only, but the fact is that it is but recently that this departure has been made, and even now the main energy of the school has been along the same line as that to which its efforts in the past have been wholly directed, viz, linguistic studies.

THE SAUVEUR SUMMER COLLEGE OF LANGUAGES.

This is the oldest school of this class in the country. "The Sauveur Summer College of Languages," writes Dr. Sauveur, "is the parent, the prototype of all the schools of the same order that have since been established. The first session was held at Plymouth, N. H., in 1876. At that time no summer school of this character was in existence. Two years later the institute at Martha's Vineyard was opened, and the following year Chautauqua. From 1877 to 1883 the work of Dr. Sauveur was at Amherst College. In 1883 Dr. Sauveur retired, as has been said, from the management of the Amherst school, and in 1884 reopened his school at Burlington, Vt. In 1886 the school was moved to Oswego, N. Y., where the sessions of that year and of 1887 were held. Since then the sessions have been again at the University of Vermont, at Burlington. During its existence the school has had over 3,000 students in attendance. Half of these have been teachers. The attendance for the session of 1890 was 235. The last announcement showed a faculty of 14 professors, giving instruction in the following subjects: French, German, Italian, Spanish and modern Greek, Latin and ancient Greek; comparative grammar of the English language, and the formation of modern English; English literature, and rhetoric. The session lasted from July 7 to August 1. This institution is thus seen to be strictly a school of languages. The method of instruc-

tion is the natural method, the introduction of which in our schools Dr. Sauveur has done so much to forward. Dr. Sauveur is the author of a large number of educational works, among which are his "Introduction to the Teaching of Living Languages," "Introduction to the Teaching of Ancient Languages," "Entretiens sur la Grammaire," "Grammaire Française pour les Anglais," "Causeries avec mes Elèves," and "La Parole Française." Besides these, Dr. Sauveur has edited and annotated American publications of several of the French classics.

OTHER SUMMER SCHOOLS OF LANGUAGES.

For four years there has been a Berlitz summer school of languges at Asbury Park, N. J. The average attendance has been about 75 students. The present faculty numbers 13. Besides simple instructions in French and German, a normal course has been given to teachers, in which are explained the various methods of teaching languages. A Berlitz summer school opened last year at Chicago, with what success I do not know.

A summer school of languages of Cornell and Iowa colleges was held in 1887. Its subsequent history I have been unable to discover.

SUMMER SCHOOLS OF MUSIC AND OF ORATORY.

There have been several summer schools of this class, and among them the following: The Lexington (Mass.) Normal Music School; Batchellor's Tonic Sol-fa Institute, Philadelphia; Seward's Tonic Sol-fa Institute; Straub's American Normal Musical Institute; Dr. S. S. Curry's School of Expression; The Boston School of Oratory; National School of Elocution and Oratory.

THE LEXINGTON (MASS.) NORMAL MUSIC SCHOOL.

This school for the training of teachers was established in 1883 and has had a successful existence, and now possesses a national reputation. In answer to an inquiry regarding the school, the principal, Mr. H. E. Holt, writes (1891):

> Seven years ago I opened a summer school for the study of normal methods as applied to the teaching of music. We had 11 teachers the first year, and the number has steadily increased each year, the term of 1890 numbering 130, with a graduating class (three years' course) of 24. We have teachers from all parts of the country, and the number and quality are constantly increasing. Next year we shall arrange for a post-graduate course. We are not able to supply the demand for well-trained teachers. I also have classes for the training of teachers on Saturdays in Boston. These classes are well attended and the interest is constantly increasing.

SCHOOL OF EXPRESSION.

The first summer term of this school, at whose head is Dr. S. S. Curry, was held at Martha's Vineyard in 1886. It was attended by 29 students, nearly all of whom were professors in colleges or teachers in normal schools or clergymen.

The second term was held at Saratoga Springs, N. Y., the summer of 1887. There were 23 students. The clergymen came from 7 different denominations.

The summer session of 1888 was held in Boston. There were graduates from 7 different colleges, and the students came from 20 different States and Canada. The number of students was 42.

The summer term of 1889 was held at Lancaster, Mass. The number of students was the same as the preceding year.

The fourth summer term, that of 1890, was held at Newport, R. I., and so happy were the students in the place that they voted a request to have the session there another year. The next summer school will accordingly be held at Newport in 1891.

The amount of work done by each student in the school has been on an average six hours a day for five weeks. The following subjects have been taken up: Vocal training, phonology and articulation, vocal expression, physical training, pantomimic expression, Shakespeare, Browning, Tennyson, extemporaneous speaking, public reading, methods of training voice and vocal expression, the history of pedagogy in relation to elocution and expression, principles of educational reformers and lessons deducted from them for expression, etc.

The Boston School of Oratory for special instruction in the synthetic philosophy of expression and literature held a summer session of five weeks in 1890. Summer sessions were also held by the National School of Elocution and Oratory, James E. Murdock, president, in Philadelphia; and by the National School of Elocution and Oratory at Ann Arbor. The Monroe College of Oratory, Boston, Mass., which held a summer session in 1887, is now merged with the Martha's Vineyard Summer Institute, and bears the name of Emerson College of Oratory. This school has been exceedingly successful, and had an attendance in 1890 of over 100 students.

INTERNATIONAL Y. M. C. A. TRAINING SCHOOL.

The Young Men's Christian Association Training School is located in Springfield, Mass., and is the first, and as yet, the only institution of its kind in existence. Its object is to prepare Christian young men to become efficient general secretaries and gymnasium instructors in the Young Men's Christian Associations. The school has therefore two departments, the one known as the secretarial and the other as the physical or gymnasium department. For five successive summers, beginning in 1887, the school has held a summer session of its gymnasium department. At the last session held (1891) there were nine instructors, giving instruction in Bible study, organization and methods of association work, athletics and aquatics, physiology, physical department management, fencing, wrestling, anthropometry, Swedish system of gymnastics, prescription, first aid, Delsarte system, library and literature of physical education. There were also five special lectures. The number of men registered for the five sessions were respectively 28, 50, 57, 48, and 38, "showing," says the secretary, "the great increase at first and the gradual falling off now that the special stress of the first call for gymnasium directors has passed, as more thoroughly trained men are put forward by the regular schools to fill the positions."

It has been decided to hold no summer session in 1892 and to have instead a ten days' conference, which shall be open to all men interested in the physical department and afford opportunity for advancement by means of lectures, conferences, and practice, but be less formal and require less time and expense than a regular school session. Other schools teaching single subjects that have held summer sessions are: School for Swedish Gymnastics, at Boston; School of Elocution and Oratory, at Thousand Isles; School of Languages, (Alfred Hall, principal), Prudence Island, R. I.; Western Normal Music School, Highland Park, Ill.; Eastern Normal Music School, New Brighton, Staten Island, N. Y.; Manual Training School, St. Louis, Mo. Concerning these schools the Bureau has been unable to obtain information. Many of them are undoubtedly not now in existence.

PART III.

SUMMER SCHOOLS GIVING INSTRUCTION IN SEVERAL BRANCHES.

I.—CHAUTAUQUA.

Under the title of the Chautauqua movement are embraced a variety of methods for the popularization of knowledge in the United States. The description of the growth of these agencies forms one of the most interesting and remarkable chapters in the history of educational development in this country. The almost marvelous growth of this movement within the period of a few years offers a striking testimony to what economists call "an effective demand" upon the part of the general public for a liberal education. "The ramifications of Chautauqua would stagger belief," says a recent writer,[1] "did we not know how steam and electricity have developed the world into the round table of these latter days and with their weaver's shuttle laced together the thoughts of men. Chautauqua is a marvelous illustration of the law that often great social and economic forces flow with a tidal sweep over communities only half conscious of them. Its 100,000 registered students, half of whom are between 30 and 40 years of age, and its practically endless courses of study make this home college the realization of a world university, the summer assembly being its visible center. About one in every thousand of the people of the United States owns the shibboleth Chautauqua, while more than one in every hundred visits its yearly gatherings. It exists in every State and Territory. Its circles have rolled from Chautauqua Lake to Canada, Mexico, Central America, Chile, Great Britain, France, Russia, Bulgaria, Syria, Cape Colony, Persia, India, Australia, China, Japan, the isles of the sea, Hawaii, Alaska."

The present Chautauqua embraces several instrumentalities by which it performs its work. These agencies are of three general classes: (1) voluntary home reading during the year, with reports of progress to headquarters; (2) scholarly study and professional training by correspondence, and (3) great popular summer meetings at Chautauqua and other places.

Historically speaking, the whole movement is the outgrowth of a kind of religious folkmote, the camp meeting, which was transformed at Fair Point on Lake Chautauqua into a Sunday-school assembly in August, 1874.

The idea of utilizing the camp meeting for educational purposes, the thought of a "camp-meeting institute," where methods of teaching should be cultivated, was suggested by Silas Farmer, the antiquary and historian of Detroit, Mich., in the Sunday School Journal, as early as April, 1870; but a similar, and perhaps larger, idea was early cherished by Lewis Miller, of Akron, Ohio, the inventor of the Buckeye mower, which has revolutionized the farming machinery of America. This practical-minded, large-hearted, and wealthy man, who all his life had been actively engaged in Sunday-school work, and who was one of the earliest and staunchest promoters of mechanical and agricultural education in Ohio, joined hands with Dr. (now Bishop) John H. Vincent for the improvement of Sunday-school teaching by a generous alliance with science and literature. Dr. Vincent, for many years a leader in American Sunday-school work, believed most strongly in the increase of "week-day power" by the intimate association of secular and religious learning. He believed in the harmony of religion with every-day life. In the summer of 1873 the two men, Mr. Miller and Dr. Vincent, visited the Fourth Erie Conference camp

[1] The New England Magazine, vol. 8, p. 94.

meeting of the Methodist Episcopal Church, held at Fair Point, on Lake Chautauqua, in southern New York. They chose that Fair Point for a local establishment of "The Chautauqua Sunday-School Assembly."

To understand the historical development of the modern Chautauqua, with its many-sided educational and social features, we must never lose sight of its original democratic and religious foundations. Whatever may be the tendencies and aspirations, the variations and specializations of this popular educational experiment, the folkmote remains the basis of all. The Chautauqua Sunday-School Assembly began its sessions on the first Tuesday evening in August, 1874, and that evening has continued to be the time for the regular "assembly opening," although fully one month of educational work along secular lines now precedes this memorable date in the Chautauqua calendar. The first distinctive objects of Chautauqua are inseparably connected with Biblical study in a Sunday-school normal institute. The early programmes of the assembly show a rich succession of lectures on practical Sunday-school work and on the Bible, with conferences and discussions on methods of teaching. Into the religious current came, in successive years, more and more tributary streams representing modern science and literature in their relations to life and thought. One can distinctly trace in the records of Chautauqua the beginnings of all its modern educational tendencies, whether in pedagogics, art, social science, or the higher education. Map-drawing, blackboard sketching, the study of Biblical geography in a great relief map of Palestine made of turf and stones, open-air talks, concerts, and even popular entertainments were not absent from those early programmes. Prominent among the early features of Chautauqua were its wonderful catholicity, its broad spirit of toleration, its democratic and widely representative character. From the very outset members of all the leading Protestant churches joined in the work. Church congresses were held at Chautauqua, and prominent clergymen from various denominations addressed the assemblies. Among the 600 students the very first year there were representatives from 25 States and from the provinces of Canada.[1]

Beginning thus as a popular gathering for the discussion of methods of Sunday-school teaching Chautauqua has gradually extended its scope and differentiated its methods of instruction until at present the Chautauqua University embraces the following distinct departments:

I. The Chautauqua assembly.
   1. The summer meetings at Chautauqua.
   2. The Sunday school normal department.
   3. The schools of language.
   4. The Chautauqua teachers' retreat.
II. The Chautauqua literary and scientific circles.
III. The Chautauqua College of Liberal Arts, formerly known as "The Chautauqua University," and with powers as provided in its charter.
IV. The Chautauqua School of Theology.
V. The Chautauqua press.
VI. Chautauqua extension and summer assemblies.

The summer assembly at Chautauqua is held in July and August of every year. The city of Chautauqua occupies a well-wooded, naturally terraced land at a point on the northern shore of Chautauqua Lake, and contains more than five hundred artistic and attractive cottages, a large hotel, and many other buildings which are used for public exercises, lectures, and recitations. A large model of Palestine, 300 feet long, and a miniature representation of modern Jerusalem are among the peculiar attractions of this academic town.

The exercises that fill the two months' session of this "summer university," as it has been called, are extremely varied in nature, but may be classed under the two general heads: (1) The public daily programme, which includes courses of lectures, Sunday sermons, single addresses, concerts, readings, etc. These are free to all citizens alike. (2) The educational classes, which comprise the college of liberal arts, teachers' retreat, school of sacred literature, school of music, school of physical education, and a large number of other departments, such as elocution and oratory, drawing and painting, wood-carving, cooking,

[1] Article by Dr. H. B. Adams in New York Independent, September and October, 1888.

photography, sloyd, stenography, etc. For the special class room instruction offered in this division tuition fees are charged.

An idea of the character of the exercises of the first class, those open to the public, may be gained from the following programme for the last session (1891):

AMERICAN COURSES.

(1) American life and home institutions (6 lectures), Prof. J. B. McMaster, University of Pennsylvania.
(2) Early politics in the United States (5 lectures), Prof. J. A. Woodburn, University of Indiana.
(3) Constitutional history (6 lectures), Prof. F. N. Thorpe, University of Pennsylvania.
(4) Early voyages and conquests (4 lectures), Prof John Fiske, Harvard University.
(5) Ancient and native peoples of North America (5 lectures), Prof. Frederick Starr, American Museum of Natural History, N. Y.
(6) American writers (3 lectures), Mr. Leon H. Vincent, Philadelphia, Pa.
(7) Discovery and revolution (2 lectures, with stereopticon), Prof. M. L. Williston, Chicago, Ill.
(8) The American Navy (2 lectures, with stereopticon), Mr. H. W. Raymond, of the U. S. Navy Department.
(9) American scenery in the West (3 lectures, with stereopticon), Mr. H. H. Raghn, Syracuse, N. Y.
(10) Scenery of the South (3 lectures, with stereopticon), Dr. A. H. Gillet, Cincinnati, Ohio.

MISCELLANEOUS COURSES.

(1) Italian beginnings of modern history (4 lectures), Prof. H. B. Adams, Johns Hopkins University.
(2) Readings in the book of Job (7 lectures), Dr. W. R. Harper, Yale University.
(3) Mediæval biography (5 lectures), Prof. C. J. Little, Syracuse University.
(4) Literary topics (3 lectures), Miss Agnes Repplier, of Philadelphia.
(5) Biographical studies (3 lectures), Dr. John Henry Barrows, Chicago, Ill.
(6) Social and economic problems (4 lectures), Dr. E. W. Bemis, Vanderbilt University.
(7) The policies of Great Britain (3 lectures), Hon. George Makepeace Towle, Boston, Mass.
(8) Questions of the hour (3 lectures), Mrs. Julia Ward Howe, Boston, Mass.

SINGLE LECTURES AND ADDRESSES.

Single lectures and addresses by Dr. W. T. Harris, Bishop W. A. Leonard, Hon. Henry Watterson, Dr. Edward McGlynn, Dr. R. S. MacArthur, Miss Frances E. Willard, Bishop John P. Newman, Mrs. Mary A. Livermore, Col. Francis W. Parker, Gen. Stewart L. Woodford, Dr. Josiah Strong, Hon. John J. Maclaren, Mrs. Zerelda Wallace, Dr. George T. Dowling, Mr. Melvil Dewey, Dr. Charles Stewart Welles, Dr. J. T. Edwards, Dr. Frank M. Deems, Mr. Jacob A. Riis, Prof. R. F. Weidner, Mrs. Lydia Von Finckelstein Mountfort, Dr. J. M. Buckley, Dr. A. B. Leonard, Hon. Charles Carroll Bonney.

DRAMATIC READINGS.

The list of readers includes the names of Mr. Thomas Nelson Page, Mr. George Riddle, Prof. R. L. Cumnock, Mrs. Charles W. Richards, Miss Maud Murray, Miss May Donally, Miss Jesse Dalrymple, Fred Emerson Brooks, etc.

MUSIC.

Dr. H. R. Palmer, of New York, director of public concerts at Chautauqua, will be assisted by Rogers's band and orchestra; Mr. William Sherwood, pianist; Mr. I. V. Flagler, organist; Miss Annie Park, pianist; Miss Marie Decca, prima donna; Miss Waltzinger, soprano; Mrs. Jennie Hale Wade, soprano; the Schumann Quartette of New York; Mr. Charles Kellogg, whistler and bird warbler; Mr. Forest Cheney, violinist; large trained chorus of 400 voices.

ASSEMBLY CLASSES (DAILY, AUGUST 5–21).

Boys and girls' class conducted by Rev. B. T. Vincent. Bible study for the young. The Sunday school normal class, Dr. J. L. Hurlbut. Course of training for Sunday-school teachers. Primary teachers' class under the charge of a competent instructor. Devotional hour led by Dr. B. M. Adams.

ENTERTAINMENT AND RECREATION.

Prize spelling and pronunciation matches, illuminations, fireworks, open-air concerts, tennis tournament, ball matches, regattas, athletic exhibition, boating, bathing, driving.

The following abridgment of the programme for the educational classes during the summer session of 1891 shows better than any other description would the almost infinite variety of the subjects presented, and the personnel of the corps of instructors and lecturers:

COLLEGE OF LIBERAL ARTS.

I. Department of English language and literature:
(1) Old English, 5 hours a week, Mrs. P. L. McClintock.
(2) Class talks on style, 5 hours a week, Prof. W. D. McClintock.
(3) Chaucer, 5 hours a week, Mrs. P. L. McClintock.
(4) Shakespeare, 5 hours a week, Prof. W. D. McClintock.
(5) Browning's shorter poems, 5 hours a week, Prof. W. D. McClintock.
(6) An introduction to the study of literature, 5 hours a week, Prof. W. D. McClintock.
(7) American poets, Prof. W. D. McClintock.

II. Department of German language and literature:
(8) Beginning German, 10 hours work, Prof. H. J. Schmitz.
(9) Intermediate German, 5 hours a week, Prof. Schmitz.
(10) Intermediate German, 5 hours a week, Prof. Starr W. Cutting.
(11) Advanced German, 5 hours a week, Prof. Schmitz.
(12) Advanced German, 5 hours a week, Prof. Cutting.
(13) German composition, 5 hours a week, Prof. Cutting.
(14) Light reading class, 5 half hours a week, Prof. Schmitz.

III. Department of French language and literature:
(15) Beginning French, 10 hours a week, Prof. A. de Rougemont, assisted by Mlle. Lea R. de Lagneau.
(16) Intermediate French, 10 hours a week, by Prof. de Rougemont and Mlle. de Lagneau.
(17) Advanced French, 10 hours a week, by Prof. de Rougemont.
(18) Advanced French, 5 hours a week, by Prof. de Rougemont.

IV. Department of preparatory Latin:
(19) Beginning Latin, 10 hours a week, Mr. F. J. Miller.
(20) Cæsar, 5 hours a week, Mr. F. J. Miller.
(21) Cicero's Orations, 5 hours a week, Mr. Frank Abbott.
(22) Virgil's Æneid, 5 hours a week, Mr. F. J. Miller.

V. Department of college Latin:
(23) Odes, Satires, and Epistles of Horace, 10 hours a week, Prof. Lewis Stuart.
(24) Agricola and Germania of Tacitus, 5 hours a week, Prof. Stuart.
(25) Easy light reading, 5 hours a week, Mr. Frank Abbott.
(26) Illustrated lectures on ancient Roman life, 2 hours a week, Prof. Stuart.
(27) Latin comedy, 5 hours a week, Mr. Abbott.

VI. Department of preparatory Greek:
(28) Beginning Greek, 10 hours a week, Prof. William E. Waters.
(29) Anabasis, 10 hours a week, Prof. Waters.

VII. Department of college Greek:
(30) Sophocles, 5 hours a week, Prof. Martin L. D'Ooge.
(31) The Athenian orators, 5 hours a week, Prof. D'Ooge.
(32) Homer, 5 hours a week, Prof. Thomas D. Seymour.
(33) Homeric readings, 2 hours a week, Prof. Seymour.
(34) Plato's Phædo, 5 hours a week, Prof. Seymour.

VIII. Department of physics and chemistry:
(35) Experimentation in physics and chemistry, 5 hours a week, Profs. J. T. Edwards, L. H. Batchelder, Orville E. Johnson.
(36) Systematic physics, 5 hours a week, Prof. Edwards.
(37) Systematic chemistry, 5 hours a week, Prof. Batchelder.
(38) Quantitative analysis, 10 hours a week, Profs. Edwards, Batchelder, Johnson.
(39) Quantitative analysis, 10 hours a week, Profs. Edwards, Batchelder, Johnson.
(40) Electricity, 10 lectures, Prof. Edwards.

IX. Department of mathematics:
(41) Algebra, 5 hours a week, Prof. William Hoover.
(42) Geometry, 5 hours a week, Prof. Hoover.
(43) Trigonometry, 5 hours a week, Prof. Hoover.

X. Department of geology, mineralogy and botany:

(44) Economic geology, 5 lectures a week, Prof. Frederick Starr.
(45) Anthropology, 5 hours a week, Prof. Starr.
(46) Botany, elementary, 3 hours a week, Prof. Starr.

XI. Department of history:
(47) The nineteenth century, 5 hours a week, Prof. Herbert B. Adams.
(48) The Italian beginnings of modern history, four lectures, Prof. Adams.
(49) American political history, 5 hours a week, Prof. James A. Woodburn.

XII. Department of political economy and social science:
(50) Economic questions of the day, 5 hours a week, Prof. Edward W. Bemis.
(51) Four public lectures, Prof. Bemis.

SCHOOLS OF SACRED LITERATURE.

I. College students' school of the English Bible:
(1) Gospel of the Old Testament, Prof. William R. Harper.
(2) The New Testament epistles, Prof. George S. Burroughs.
(3) The Epistle of the Galatians, Prof R. F. Weidner.
(4) Special conferences.

II. Young people's school of the English Bible:
(1) General view of the books of the Bible, Prof. Burroughs.
(2) Messianic prophecies, Prof. Harper.
(3) Life of Jesus, Prof. J. Lyman Hurlbut.
(4) Special conferences.

III. Teachers' and club-leaders' school of the English Bible:
(1) Introduction: The early manifestations of Jesus and the belief in Him, Prof. Charles Horswell.
(2) Central manifestations of Jesus and the Victory, Prof Horswell.
(3) General courses and conferences.

IV. General Chautauqua school of the English Bible:
(1) The early chapters of Genesis, 6 hours, Prof. Harper.
(2) I and II Corinthians, 12 hours, Prof. Burroughs.
(3) The teachings of Jesus and Peter, 12 hours, Prof. Weidner.
(4) Various methods of Bible study, Bishop John H. Vincent.
(5) Nahum and Zephania, 12 hours, Prof. David A. McClenahan.
(6) Synoptic gospels and the gospels of John, 12 hours, Prof. Burroughs.
(7) Teachings of Paul and John, Prof. Weidner.
(8) Principles of biblical interpretation, 12 hours, Prof. Sylvester Burnham.
(9) Outlines of biblical history. 12 hours, Prof. Loring W. Batten.
(10) Mosaic authorship of the Pentateuch, 6 hours, Prof. W. H. Green.
(11) Unity of Isaiah, 6 hours, Prof. Green.
(12) Outlines of biblical history, 12 hours, Prof. Batten.
(13) Special principles of biblical interpretation, 12 hours, Prof. Burnham.
(14) Epistles of Galatians and Philippians.

V. School of Hebrew and the Old Testament:
(1) Hebrew course for beginners, 12 hours a week, Profs. Harper and McClenahan.
(2) Second Hebrew course for reviewers, 18 hours a week, Profs. Harper, McClenahan, and Horswell.
(3) Third Hebrew course, historical Hebrew, 18 hours a week, Profs. Harper, McClenahan, and Dr. R. F. Harper.
(4) Fourth Hebrew course, 18 hours a week, Profs. Harper, Burnham, and Batten.

VI. School of New Testament, Greek:
(1) First Greek course for beginners, 12 hours a week, Profs. Weidner and Horswell.
(2) Second Greek course, 12 hours a week, Profs. Weidner and Horswell.
(3) Third Greek course, 18 hours a week, Profs. Weidner and Horswell.
(4) Fourth Greek course, 18 hours a week, Profs. Weidner and Horswell.

VII. School of Semitic languages and ancient versions:
(1) Assyrian for beginners, 12 hours a week, Prof. Harper.
(2) Advanced Assyrian, 12 hours a week, Dr. R. F. Harper.
(3) Arabic for beginners, 6 hours a week, Dr. Harper.
(4) Advanced Arabic, 6 hours a week, Prof. Harper.
(5) Syriac, 6 hours, Prof. Burnham.
(6) First Septuagint course, 6 hours a week, Prof. Burnham.
(7) Special lectures (12) in connection with the course.
(8) Special Sunday morning Bible studies.
(9) Conferences and discussions.

CHAUTAUQUA TEACHERS' RETREAT.

Francis W. Parker, principal.

1. The nature of the course:

The faculty of the teachers' retreat will present and illustrate the system of teaching and training now in operation in the professional training class of the Cook County Normal School, by talks on psychology, pedagogics, and methods, and lessons upon the principles and methods of teaching the natural sciences, geography, history, elocution, literature, and number.

The distinctive feature of the professional training may be designated by the word concentration. All the teaching and training is concentrated upon the central subject of life and the laws of life, physical, mental, and moral.

All the talks and lessons of every teacher will be in the closest relation and under one common principle. The director will explain the principles of psychology and pedagogics, and each teacher in his or her department will illustrate and apply to practical schoolroom work the theory presented by the director.

II. Psychology, pedagogics, and the art of teaching (30 talks), Principal F. W. Parker.
III. Elementary science, (15 talks), one field lesson every day. Wilbur S. Jackman.
IV. Numbers, fifteen talks, William M. Griffin.
V. Structural geography, (15 lessons). Sand and putty modeling, painting, and blackboard lessons, Helen Waley.
VI. Relations of studies to primary teaching, 15 lessons, Sarah E. Griswold.
VII. Physical development, 10 lectures, Frank S. Parker.
VIII. Experimental science, chemistry, and physics, 5 hours a week, Prof. J. T. Edwards and assistants.
IX. Historical English Grammar and Shakespeare, 5 hours a week on style and 5 hours a week on Shakespeare, by Prof. McClintock.
X. Penmanship.
XI. Normal instruction in Sloyd and kindergarten.
XII. Lectures by Dr. W. T. Harris, Mr. C. W. Bardeen, Mr. Melvil Dewey, Col. Parker, *et al.*

SCHOOL OF PHYSICAL CULTURE.

The gymnasium and boathouse.

The gymnasium occupied by this department is a handsome, well-equipped building, beautifully situated on the very shores of the lake. On the first floor, besides lecture halls and dressing rooms, is a storeroom for fine racing barges, light rowboats, etc. The second story is given up entirely to the gymnasium proper, which is fitted with the best and most approved apparatus.

The courses of instruction.

(1) Normal course (July 4 to August 14), 5 hours a day (Saturdays excepted). Systematic course for gymnasium teachers. Theory and practice. Anatomy, physiology, hygiene. First aid. Physical diagnosis. Anthropometry, floor work, etc.
(2) Advanced normal course (July 4 to August 14), 5 hours a day (Saturdays excepted). Distinct from course No. 1, and designed for those taking more than one year's work in the school.
(3) Men's class in gymnastics (July 4 to August 14), 1 hour daily.
(4) Children's classes (July 4 to August 24), one-half hour daily. Single exercises for young children.
(5) Boys' class (July 4 to August 14), 1 hour daily. Systematic course in the use of gymnasium apparatus.
(6) Girls' class (July 4 to August 14), one-half hour daily.
(7) Swedish system of gymnastics (July 4 to August 14). A thorough course in this valuable system, which is growing rapidly into favor in the United States.
(8) Delsarte system (July 4 to August 14). So much as pertains to physical culture.
(9) Athletics (July 4 to August 14). Boxing, fencing, tennis, baseball, swimming, rowing, field sports. Tuition varies with character and length of courses.

CHAUTAUQUA SCHOOL OF MUSIC.

The course.

(1) Voice (July 7 to August 22), 5 half hours a week, Mr. J. Harry Wheeler.
(2) Primary and intermediate harmony (July 7 to August 22), 5 hours a week, Mr. L. S. Leason.

(3) Advanced harmony (July 7 to August 4), 5 half hours a week, Mr. I. V. Flagler.
(4) Analytical harmony (August 5 to 22), 5 half hours a week, Dr. H. R. Palmer.
(5) Teachers' club (July 7 to August 22), 5 half hours a week. Methods of teaching and conducting. Public school music, Mr. L. S. Leason and Dr. H. R. Palmer.
(6) Piano recitals and analysis of music (July 20 to August 15), Mr. William H. Sherwood.
(7) Chorus drill (July 7 to August 22), Dr. H. R. Palmer and Mr. L. S. Leason.
(8) Young people's singing class (July 7 to August 4), 4 hours per week, Mr. L. S. Leason.

THE CHAUTAUQUA LITERARY AND SCIENTIFIC CIRCLES.

In the fourth year of the Chautauqua experiment the now famous C. L. S. C., or Chautauqua Literary and Scientific Circles, began to widen from that beautiful highland lake, Chautauqua, over all the country. There are now about 2,000 circles in active life, and with a total enrolled membership that lacks but little of 100,000. Since the organization of the plan in 1878 there have been fully 180,000 students enrolled.

The essentials of the reading-circle plan are these:

(1) A four years' course of reading, including selections in English from the ancient classics, history, literature, science, and art. Each year of the four is devoted especially to a great nation, and is known as "the Greek year," "the Roman year," "the English year", or "the American year." No attempt is made to study languages or mathematics. The course is general and follows in a measure the subjects taught in the average college; it gives what has been called the "college outlook." (2) Certain books, many of them specially prepared by well-known authors, are designated each year by a council of 6 prominent men (3) A monthly magazine, The Chautauquan, contains supplementary articles on the subjects of the course by leading writers of the day, general miscellaneous matter on current affairs, and several departments designed to aid the reader, such as apportionment of the course by the week and month, notes on the books, outlines of reading, word studies, etc. (4) A membership book sent to each reader includes analyses of the required books and question papers (memoranda) to be filled out and returned to the office. The papers are intended to aid the reader in reviewing and systematically arranging the facts and principles he has read. They are not examinations, nor are they regarded as such. (5) Local circles may be formed in any community where three or more readers desire the benefits of comradeship. There are about 2,000 such circles now in active life. (6) A certificate is granted at the completion of the course to all who report themselves as having read the required literature. This certificate states only this fact, and has not the remotest connection with a degree. This first step in the Chautauqua system fails unless it leads people to continue the habit of reading. Therefore a large number of advanced courses, prepared by specialists, are offered. The four years' course is general, and enables the reader to find a congenial subject for further and particular study. These advanced courses meet this demand for specialization. There is a Young Folks' Reading Union, designed to encourage among the youth the reading of the best books, and a Teachers' Reading Union, with a three years' course in professional lines.

The present principal of the C. L. S. C. is Rev. J. L. Hurlbut, D. D., and the following description of the work of which he is at the head is from his pen and extracted from a circular issued by the management of this branch of the Chautauqua enterprise:

During the assembly session of 1878 the Chautauqua Literary and Scientific Circle was instituted. The plan involved a course of reading and study covering the principal subjects of the college curriculum, but omitting of necessity its drill in languages and mathematics, giving to the English reader an outlook over the field of learning and some acquaintance with the masterpieces of literature, ancient and modern; employing handbooks and compendiums for the mastery of outlines, and appointing more extensive works to be read—a course which the individual could pursue alone, if necessary, yet adapted for associated study, sufficiently simple to invite the masses and to lead them on without discouragement from its difficulties or its extent, yet so thorough as not to be deemed superficial by the more learned. Above all, it was to bring the six secular days of the week into harmony of purpose with the Sabbath, not only by recognizing the Bible as a department of its study, but more especially by having the entire course penetrated with the spirit of reverence and of faith.

The scheme was broached to a few eminent literary men and some leading educators, with a view to obtain the benefit of their criticisms and suggestions It received a hearty indorsement from all who took the trouble to investigate it; among others, from President Chadbourne, of Williams College; President Warren, of Boston University; and Dr. Howard Crosby, then chancellor of the University of the City of New York. The honored William Cullen Bryant gave it a strong recommendation in a personal letter to Dr. Vincent, almost the last written by his pen, less than a month before his death. In it he wrote:

NEW YORK, *May 18, 1878.*

MY DEAR SIR: I can not be present at the meeting called to organize the Chautauqua Literary and Scientific Circle, but I am glad that such a movement is on foot, and wish it the fullest success. There is an attempt to make science, or a knowledge of the laws of the material universe, an ally of the school which denies a separate spiritual existence and a future life—in short, to borrow of science weapons to be used against Christianity. The friends of religion, therefore, confident that one truth never contradicts another, are doing wisely when they seek to accustom the people at large to think and to weigh evidence as well as believe. By giving a portion of their time to a vigorous training of the intellect and a study of the best books, men gain the power to deal satisfactorily with questions with which the mind might otherwise become bewildered. It is true that there is no branch of human knowledge so important as that which teaches the duties we owe to God and to each other, and that there is no law of the universe, sublime and wonderful as it may be, so worthy of being fully known as the law of love, which makes him who obeys it a blessing to his species, and the universal observance of which would put an end to the large proportion of the evils which affect mankind. Yet is a knowledge of the results of science, and such of its processes as lie most open to the popular mind, important for the purpose of showing the different spheres occupied by science and religion, and preventing the inquirer from mistaking their divergence from each other for opposition?

I perceive this important advantage in the proposed organization, namely, that those who engage in it will mutually encourage each other. It will give the members a common pursuit, which always begets a feeling of brotherhood They will have a common topic of conversation and discussion, and the consequence will be that many who, if they stood alone, might grow weary of the studies which are recommended to them, will be incited to perseverance by the interest which they see others taking in them. It may happen in rare instances that a person of eminent mental endowments, which otherwise might have remained uncultivated and unknown, will be stimulated in this manner to diligence, and put forth unexpected powers, and, passing rapidly beyond the rest, become greatly distinguished, and take a place among the luminaries of the age.

I shall be interested to watch, during the little space of life which may yet remain to me, the progress and results of the plan which has drawn from me this letter.

I am, sir, very truly, yours,

W. C. BRYANT.

Rev. Dr. JOHN H. VINCENT.

The course of study is planned to cover four years, and may be accomplished by most readers in an hour a day during ten months of each year. Of course no unlettered person can secure a finished education by merely reading an hour per diem for four years, yet so much time spent with thoughtful and wisely-chosen books will impart to any mind a knowledge of literature, a measure of intelligence, and an intellectual training by no means to be despised. It embraces the general subjects of history, science, literature, and Bible study, with a few branches which might be included under home and character. As at present arranged the four years' course is as follows:

1891-92: American history, American literature, history and literature of the far East, physiology and hygiene, questions of public interest, German literature, religious literature.

1892-93: Greek history, Greek literature, Greek mythology, ancient Greek life, circle of the sciences, zoology, chemistry, philanthropy, religious literature.

1893-94: Roman history, Latin literature, human nature, political economy, art, philosophy, physics, physical geography, uses of mathematics, religious literature.

1894-95: English history, English literature, English composition, astronomy, geology, pedagogy, readings from French literature, social questions, religious literature.

The larger part of these readings is contained in books most of which have been especially prepared for the C. L. S. C., since the circle requires works of a peculiar quality, not precisely that of the school text-book nor that for popular readings, but uniting in a measure both characteristics. For each year from six to eight books are read,

costing generally about $5, for the large sales—aggregating more than 300,000 volumes per year—enable the publishers to give the books at low prices. A part of the course is contained in The Chautauquan, a magazine published by Rev. Theodore L. Flood, D. D., Meadville, Pa., as the organ of the C. L. S. C. Between the covers of this monthly are found serial papers on subjects of the course, reports from working circles, plans and suggestions for reading, and many articles of general interest. It is a fact worth mentioning that such a magazine, containing only solid literary and scientific matter, and without stories, circulates to the extent of 60,000 copies.

A helpful element of the plan is that of simultaneous study by all classes. The studies for each year are portioned out among the months as a suggestion, but not as a requirement; and the subjects are so arranged that all four classes shall study them during the same year. Thus the studies for 1891 and 1892 are the same for all members of the circle, but constitute the work of the first year for the class which begins in 1891 and will finish in 1895, of the second year for the class of 1894, of the third year for the class of 1893, and of the fourth year for the class of 1892. It is as if a college, seniors, juniors, sophomores, and freshmen were together in the same text-books, but one class beginning, another ending, the curriculum. In a college or school this would not be practicable, since the first year's course is a necessary stepping-stone to the second year's; but in the C. L. S. C. the work of each year is complete in itself, and does not relate closely either to what has been or what will be studied. The advantage of this plan is that in many places where four separate classes could not be carried on successfully a circle may be formed, since all are pursuing the same studies.

The flexibility of the plan is such that it admits either individual or associated study. Some follow it alone, without companionship except in the consciousness that more than 60,000 fellow-students are in line with themselves. Others find it helpful to unite in "local circles," or segments of the general circle. These local circles count up among the thousands, and are of all sizes, from three members to several hundred. There are little groups of ladies who meet, with their sewing, and listen to one reading from the course; travelers on the railroad conning their Chautauqua text-books; home circles where the kings of England are reviewed at the breakfast table; social gatherings with criticisms and cream mingled in pleasant proportion, and ambitious organizations with lecture courses and public discussions in the town hall.

There is an arrangement whereby each member, however distant, is kept in constant connection with the office of the circle. This is at Buffalo, N. Y., where Miss K. F. Kimball, the secretary, aided by her corps of assistants, maintains a supervision over the details of the work. With every mail come letters of inquiry, and, in answer thereto, circulars explaining the plan and blanks for those desiring membership are dispatched. Applications for union with the circle are received, inclosing the annual fee of 50 cents, which is the sole expense of the association, except, of course, the cost of books.

Each year there is sent to every member a membership book containing suggestions for study, special test papers, encouraging addresses from the chancellor and counselors, and "outline memoranda" on the current topics of study. These latter are sent both as a guide and an examination, and consist of four pages of questions on the readings of the year, with blanks for answers. The items of printing and postage in sending all this material to 60,000 people are considerable. Lest any may imagine a financial aim in the enterprise let it be remarked, in passing, that the fees received scarcely cover the expenses of the office, and that the chancellor receives absolutely nothing for his services.

This circle, though not an ellipse, is remarkable in the possession of two centers, 65 miles apart—one at Buffalo, N. Y., the other at Chautauqua. A beautiful wooded slope on the second plateau from the lake, and removed a little from the crowd, was chosen as the special gathering place of the C. L. S. C. In honor of the greatest man in all the Christian centuries, the apostle who united broad culture with deep religious enthusiasm, it has been named "St. Paul's Grove." Here, embowered under lofty beeches and oaks, rises a white Grecian temple, whose open sides and pillars seen through the foliage remind one of the Parthenon. Within this building, "the Hall of Philosophy," are held the "Round Table" conferences during the annual assembly.

Outside "the Golden Gate" of this grove the members of the graduating class assemble on the annual recognition day, and after a responsive exercise they march with songs and the scattering of flowers through the gate and under the arches into the hall, where they are formally recognized by the chancellor and his associates as members of "The Society of the Hall in the Grove," which is the alumni association of the C. L. S. C.

The founder of the C. L. S. C. has a touch of sentiment in his nature, which discloses itself in many of the minor details of the plan. For instance, there are certain "memorial days" to be celebrated throughout the year, as "Shakspeare's Day,"

"Addison's Day," "Bryant's Day," and other birthdays of great men in literature. There is "Inauguration Day," commemorative of the circle's organization; "Opening Day," October 1, when the members are supposed to open their text-books for the year; and certain special Sundays throughout the year. Selections are given for reading on each of these days, and at noon of each "memorial day" the big bell at Chautauqua rings. 'Tis said that all true Chautauquans, beside what shores soever they may dwell, can hear its distant echoes!

There are also "camp fires," when the members gather in the evening and sing Chautauqua songs and listen to Chautauqua speeches by the light of blazing bonfires; there are annual "vigils" on the Sunday nights before and after the recognition day; and there is the Sunday afternoon "vesper service," with its simple ritual and hymns of praise. Some may look lightly on these exercises, but the wise know that it is by sentiments and enthusiasms that the world of mankind is moved and great results are wrought.

In as much as the readers represent not only every age in life and every social grade, but also all diversities of taste, information, and intelligence, it is evident that no one course of reading can be equally satisfactory to all. Some wish a course more extensive, and some desire an examination more thorough than others. Hence, besides the regular course, there is each year an additional list of four books on the subjects of the reading, called "The Garnet Series," with an outline memoranda examination, rewarded with a garnet seal on the diploma for every year that it is pursued. There is also a more complete examination upon the regular course which wins another seal for each year. By these methods both the higher and the popular demands are in a measure supplied.

Another demand among the members of the circle arose very early in its history. Many wrote for directions in following out special lines of study in which they had become interested. The majority of the members were in country homes, many of them distant from public libraries, and, while eager for knowledge, knew not in what direction to seek it. Hence arose a necessity of special courses for members who desired to supplement the general plan or who had completed the regular course. Many of these special courses have been mapped out, and others are in preparation. As the completion of the regular course at the expiration of four years will be rewarded with a diploma, so for each of the special courses pursued a seal will be affixed. Thus, there are special studies in Roman history and literature (scarlet seal), English history and literature (blue seal), Greek history and literature (crimson seal), astronomy, secular normal study, and others. These courses have been arranged with great care. For instance, in the selection of one course a statement of the plan in writing was furnished to 50 leading clergymen and theological professors, who were requested to recommend suitable works on its various subjects. Forty-five sent answers more or less extensive, which were tabulated, and the hundred or more works suggested were carefully examined until 10 standard books were finally chosen and placed upon the list.

An inspection of the records and of the letters filed in the general office at Buffalo reveals many noteworthy facts. Names are found representing all creeds and all lands. There are several hundred members in the Dominion of Canada, circles and individual students in England, Scotland, Continental Europe, South Africa, Australia, India, Japan, the Sandwich Islands, and Alaska. All denominations of Christians and many non-Christian bodies are represented in the membership. Though no religious tests are required, yet the course is thoroughly evangelical, and an atmosphere of earnest Christianity overshadows the circle.

As to the beneficial results of the organization there can scarcely be a question. Any system which will bring thousands of people into communication with the thought of the world can not fail of blessing the race. Already this movement has quickened many into higher intellectual life. More than one young man has written to the office that by it he has been awakened to a hunger after knowledge, and has left the circle for the larger culture of the college. In one of the leading local circles a house servant became a member, soon showed herself the brightest scholar in the company, resolved to obtain a higher education, and by dint of saving, with some assistance of friends who perceived her talents, entered the State normal school, where she has since graduated. It has led many young men to employ in study evenings that might have been wasted, or worse than wasted, in the saloon; and has substituted strong, thoughtful books for sensational novels in the hands of many young ladies.

It has breathed an atmosphere of culture around homes of poverty and relieved the dull round of woman's never-ending work by worthy themes of thought and conversation. It has enabled middle-aged people to supplement the deficiencies, keenly felt, of their early education. One man wrote:

"I am so grateful to you that I can't express what I feel. I am a hard-working man. I have six children, and I work hard to keep them in school. Since I found out about your circle I am trying my best to keep up, so that my boys will see what father does, just for an example to them."

Another wrote: "I am a nightwatchman, and I read as I come on my night rounds to the lights." A steamboat pilot wrote that he found the course of great value to him, "because," he says, "when I stand on deck on stormy nights I have something to think about, and you know when one has not taken care of his thoughts they will run away with him, and he will think about what he ought not."

We knew of a merchant's clerk and his wife who, except during the summer vacation, devoted the morning hours from 5 to 7 o'clock to study, in order to leave their evenings free for the claims of home, society, and church. An Army officer's wife wrote from the plains that no other white woman was living within 60 miles, and the nearest bookstore was 300 miles distant, so that she was waiting impatiently three months for her text-books, and when they came she fairly wept with delight at the realization that she was at last brought into some communion with seekers after culture. Such testimonies as these might be multipled by the hundred, if it were necessary, to show that the Chautauqua Literary and Scientific Circle brings valuable results to the world.

As has been already mentioned, the office secretary of this branch of the Chautauqua work is Miss Kate F. Kimball. The following extracts from her annual report for 1891 will serve to further illustrate the present status of the work:

The class of 1894, the new class, which is always a sort of index of the popular mind, has enrolled nearly 15,000 members—a gain of more than 1,000 over last year's class, while the membership in some of the Southern and far Western States is double that of last year. The Pacific coast sends 1,000 new members, Canada 400, the Dakotas 150, Texas more than 300, while the States of New York, Pennsylvania, Ohio, and Illinois have together contributed more than 5,000. * * * The graduate enrollment of the class of 1890 carried the membership of the C. L. S. C. alumni up to 25,000, and a full tenth of the number have been actually engaged in post graduate courses of study during the past year. * * * A growing disposition to hold weekly instead of semimonthly meetings is worthy of note. * * * The convention idea and the work of the Chautauqua unions are so closely allied that one naturally leads up to the other. There have been Chautauqua unions at all periods in the history of the C. L. S. C., but never have they done better work than in this year 1890–'91.

THE CHAUTAUQUA COLLEGE OF LIBERAL ARTS.

The Chautauqua College of Liberal Arts is an historical outgrowth of the Normal School of Languages, first opened in 1879, the same year as the Teachers' Retreat. At first each school of language was independent of all the rest, but they have now been coordinated with other subjects into one institution. The present principal of the college is the Hebrew scholar William R. Harper, lately called to the presidency of the new Chicago University.

The Chautauqua College is an institution designed to aid the following persons in the acquisition of a liberal and practical education: Those young persons who are unable to leave home or business to attend college; those more advanced in years, who have been compelled to give up a college course once begun; those mature men and women who desire to make amends for the educational omissions of their early years.

It is not claimed that the correspondence system of teaching is superior to oral teaching; nor that it is destined to supersede oral teaching; nor that it can compete with oral teaching on anything like equal terms; nor that a class, school, college, or university, dependent for its entire work upon pen, paper, and post, should be sought by the student in preference to established resident institutions.

It is claimed that the majority of those who are likely to avail themselves of the advantages of correspondence instruction are actuated by an earnest purpose to obtain an advanced education, by any means which are available to them; that wise direction through correspondence, by competent and experienced teachers, is calculated to produce better results than can be expected from unaided individual effort; that teaching by correspondence can be successfully applied to a course of study so wide and comprehensive that one who masters it will secure a culture that would rightly be called liberal; that it tends to form critical habits of study; that it allows tests of the student's acquirement as rigid as can be desired by the highest standard of educational excellence.

This purpose is accomplished by a threefold method of instruction—(1) by correspondence; (2) by the work offered in the summer schools of the college at Chautauqua, N. Y.; (3) by a system of Chautauqua University extension lectures in

any town or city making the necessary arrangements. The degrees usually given by colleges and universities may be granted by the Chautauqua trustees, through the college of liberal arts, upon the satisfactory completion of the prescribed curricula. Sixteen courses are required for any baccalaureate degree. Such precautions are taken as will prevent an unworthy candidate from taking a degree. In no case is any honorary degree conferred.

(1) By correspondence: The scheme of study in each of the schools of the college is arranged in "courses," each of which is equivalent to the amount of work expected of a resident student, in one subject, in all school years. It is equal to ten hours of study a week. The number of lessons sent out in each course is equal to thirty-two, upon which an equal number of recitations will be required. These lessons may be sent out, one, two, or four at a time, as the instructor may find most effective. Examinations of the most rigid character, in the presence of judicious and responsible witnesses, will be required of each regular student.

(2) By summer schools under the regular professors of the summer session of the C. C. L. A., students may arrange for taking courses in the curricula and an examination at the close of the session.

(3) By Chautauqua University extension lectures.

In many cases three or more students form a class for study. The benefits of this plan are obvious and it is strongly recommended by the college officers.

Upon the successful completion of any course in the curriculum of the college, a certificate, properly signed, is given to the student. The presentation, by a student, to the board of trustees, of sixteen certificates on a prescribed curriculum, will entitle the candidate to a diploma and a degree.

While the college year begins October 1, students are received at any time. No lessons are corrected in the correspondence schools from June 1 to October 1, except by special arrangement. No limit is fixed to the time which students may take to complete the required courses, though it is earnestly recommended that the student make every effort to do the work in the time suggested by the respective professors. It is recommended that the students of the College of Liberal Arts attend the summer session at Chautauqua. They thus become acquainted with their professors, and much advance their work.

Any subject taught in the college may be studied by students who desire to avail themselves of such study without expecting or desiring to complete a whole curriculum.

Those desiring to complete a whole curriculum in the college must present satisfactory evidence of proficiency, either by examination or approved certificate.

Curricula leading to the degrees of bachelor of arts and bachelor of science are offered. For each degree ten courses are prescribed, and six are elective.

After admission the following is prescribed for the degree of bachelor of arts—one course in each of the following subjects: Greek, Latin, mathematics, English, German or French, history, psychology and ethics, political economy, physical sciences, and biological sciences. The additional six courses may be chosen from the courses announced under the various departments, subject only to the rules governing elective courses.

After admission the following is prescribed for the degree of bachelor of science—one course in each of the following subjects: Latin, English, German or French, mathematics, history, psychology and ethics, political economy, geology, physical sciences, biological sciences. The privileges and requirements of the six additional courses are the same as those for the degree of B. A. above.

(1) Not more than two courses may be chosen from one department of study.

(2) The student's choice of electives may be indicated one course at a time as he may prefer, but when once made it may not be changed.

(3) More than three courses may be pursued by students wishing special preparation in certain subjects, though only two will be counted toward a degree.

(4) In taking more than one course in a subject the student must proceed in order from one upward, so that the subject may be developed naturally.

It should be distinctly understood that the Chautauqua College of Liberal Arts is quite distinct from the literary and scientific circles and from the Teachers' Retreat. The province of the latter is to teach educational methods. The C. L. S. C. attempts to give a general outlook upon the world of literature and science by means of systematic courses of reading in English. The college is a long step forward from these beginnings. It has introduced classical and other linguistic courses, including French and German. The reading circles are under general direction through correspondence with a central secretary. The college has distinct departments, each under individual direction. In the local circles intellectual stimulus comes from the contact of members and from joint discussion, as well as from private reading. In the college there is direct contact between special students and individual instructors in lecture or laboratory courses during the summer session of six weeks. Afterward, if the student desires it, there is careful supervision of home studies

along specific lines by means of correspondence, written reports or examinations, at least once a month. The Chautauqua circles give no degrees, only certificates or seals, indicating the completion of a four years' course of private reading, with greater or less honor according to the character of the examinations passed or the reports made. The college proposes to give degrees, although it has never yet done so and never will do so except in cases of absolute merit as shown by a proper combination and satisfactory completion of a certain number of elective courses.

The correspondence system of college teaching is based on (1) printed instructions, sent out by the department in which the student has chosen to work; (2) on skillfully constructed examination papers, which test the student's understanding of what he may have read; and (3) on written answers or reports, sent in to the department at least once a month, and then carefully corrected and returned to the student. The system develops independence of character, habits of investigation and self-help, and the power of accurate and exact statement on the part of the pupil. It necessarily involves thoroughness of preparation and complete command of the entire month's work, which has covered the ground of what would ordinarily occupy many recitations in a class. Class work, although undoubtedly superior, has its evils, as every college student well knows. The oral recitation is hurried, and covers for each individual only a narrow range of knowledge. In large classes, students are infrequently called up, and, when they have recited, they sometimes become inattentive and take a long mental rest before beginning to calculate the probabilities of another call. It is usually thought by students and instructors that written examinations are, on the whole, the best and fairest all-around test of a man's ability and attainments. Such severe trials of the knowledge of the pupil and of the patience of the teacher are these written examinations that they are not generally resorted to more than once or twice a term; in fact, under the old college régime only once a year, in the dreaded "annuals." It should be remembered that the correspondence system requires at least monthly written examinations, from October to June. These are rarely if ever taken by persons who have shirked their duty, who have crammed and cribbed for a special test, or who are disposed to cheat in the absence of a proctor. Correspondence students are generally persons of mature years, who are very much in earnest, and who have studied for self-improvement or a genuine love of the subject rather than for a diploma or for class rank.

Of course the correspondence system is no adequate substitute for the constant drill, perfect regularity, personal supervision, suggestive power, active stimulus, and generous rivalry of class-room work, in the very sight and hearing of a vigorous and enthusiastic instructor, day after day, and throughout four years. No sane man would ever think of advocating education by correspondence as superior to education by contact. It is for the very sake of establishing personal relations between master and pupil, between the individual and society, that the summer session of the Chautauqua College of Liberal Arts was devised. Although a six weeks' course of lectures and of class work seems very trifling, as compared with the thirty-six or more weeks of the college year, it should be remembered that one college lecture or one sermon is sometimes enough to determine a life choice. If a college professor can sometimes strike sparks of intellectual light in fifty minutes, he ought to be able to kindle some sort of a fire in the course of six weeks. If a man's scientific career, like that of Prof. Joseph Henry, once secretary of the Smithsonian, is sometimes determined by the reading of a single book, "although by no means a profound work," as he himself admitted, it is possible that the suggestion of a course of good reading for an earnest student at Chautauqua may bear rich fruit in coming years. Many a university student in Germany, England, and America will admit that the best results of a professor's teaching are introductions to special literature and to new vistas of scientific interest. Many a doctor of philosophy, returning from years of foreign note-taking, has left his voluminous note books unused and has sought fresh knowledge and inspiration in books recommended by his professors or in more recent literature.

Finally, it should be borne in mind that the Chautauqua correspondence system is designed for those, and for those only, who, by the force of circumstances, are prevented from attending a regular college. As Principal Harper truly says: "There are thousands of men and women unable to avail themselves of oral assistance, who, nevertheless, are eager to study. It is surely an advantage of the correspondence system that it can aid this large class, who otherwise would have no help, and would make no progress." Popular interest in higher education is evinced by the 27,000 local reading circles, embracing, since the original organization in 1878, more than 180,000 members and a present membership of nearly 100,000. The Chautauqua literary and scientific circles are but voices of people crying in the wilderness "Make straight the way toward the people's college and the people's university." The whole strength of this Chautauqua democracy is directed toward higher education for its hopeful sons and daughters. He is a superficial judge who estimates the highest educational aims of Chautauqua by those popular addresses of

Sam Jones, Sam Small, DeWitt Talmage, Joseph Cook, Edward Everett Hale, Frank Gunsaulus, and Phillips Brooks, to audiences of 5,000 men and women in that great amphitheater, although these phenomena are wonderful, moral, and quickening forces in themselves. Here, indeed, is a great educational folkmote; but this popular assembly, by its customary contributions of "gate money," supports that growing College of Liberal Arts upon the hilltop. London now boasts her People's Palace, but it was not founded by, and is not supported by, the people. Chautauqua is a popular advance, under the leadership of two sons of the people, from a camp-meeting institute to a college of liberal arts, foreshadowing a people's university. The American people have a sovereign instinct for good leadership, whether in education, religion, or politics. Robert Browning well says:

"'Tis in the advance of individual minds
That the slow crowd should ground their expectation
Eventually to follow—as the sea
Waits ages in its bed, till some one wave
Out of the multitude aspires, extends
The empire of the whole, some feet, perhaps,
Over the strip of sand which could confine
Its fellows so long time; thenceforth the rest,
Even to the meanest, hurry in at once."

The Chautauqua School of Theology is an outgrowth of the meetings of various ministers during the summer at Chautauqua Lake. It was duly organized and chartered in the winter of 1880–'81. The objects of the school are thus set forth in the charter granted by the legislature of the State of New York:

(1) To instruct its patrons in the departments of biblical, theological, ecclesiastical, historical, and philosophical learning, which are usually taught in seminaries devoted to the training of candidates for the clerical profession, and in such other subjects as in the judgment of its instructors shall conduce to the efficiency of the candidates.

(2) To provide an archæological library and museum for the illustration of biblical and oriental research, and the collection of books, manuscripts, charts, plans, casts, relics, etc., designed to assist the biblical student in his investigation of the evidences and contents of the Holy Scriptures.

At present there are six departments—New Testament Greek, Hebrew, doctrinal theology, practical theology, historical theology, and Christian science. The instruction is done by correspondence, as in the College of Liberal Arts, and is designed to enable ministers in active church work to complete their professional studies. Each department is in charge of an instructor of reputation. In order to obtain the degree of B. D. the candidate must pass satisfactory personally supervised examinations, and obtain a certificate from each professor. No honorary degrees are given. Eight degrees have been conferred, the average period of study being five and one-half years, nearly twice the seminary course. Since its beginning the school has enrolled more than 600 ministers of all denominations. There are at present (1892) 150 pursuing the studies of this school.

THE CHAUTAUQUA PRESS.

A treatment of the various agencies by which the Chautauqua idea of popular education is carried out would be inadequate, were there no mention of the work performed by its press. From the very beginning Chautauqua has made use of this power, first through the Methodist Book Concern, the editor of whose Sunday school publications was also Chautauqua's superintendent of instruction, and soon through periodicals and books from its own presses. It was the desire of the management from the start to have an "organ" of its own, and in 1876 was commenced the publication of the Assembly Daily Herald as the organ of the summer meeting, and the Chautauquan, a monthly publication, as the organ of the literary scientific circles, and contain-

ing most of the required readings in serial form, and other articles of literary and scientific value.

The difficulties encountered in supplying the required books to members of the literary and scientific circles, soon made it necessary for the assembly to take the work into its own hands. The Chautauqua press was, therefore, established with these objects: To supervise all publications containing required readings, or for which Chautauqua is is in anyway responsible in any of its departments; and to make sure that the books selected by the counsellors are published at low rates and in sufficient quantities to meet the demands of the circles. The list of publications from this press is already a long one, and includes many valuable and notable works written especially for Chautauqua work.

CHAUTAUQUA EXTENSION.

The English idea of higher education for men and women and for life was clearly anticipated by Chautauqua. Some of the very features of English university extension characterized the educational work of Chautauqua as early as 1874. There were then, and in successive years, local lectures on great subjects, *conversazione* or class discussions, and written examinations upon topics of public instruction in Bible history and geography, normal Sunday-school work, etc. * * * Oxford and Cambridge borrowed the idea of summer meetings from Chautauqua in 1888, and in that year the first definite plan for university extension was drawn up at Chautauqua.[1]

Writing further of this university extension phase of the Chautauqua movement, Dr. Adams says, in the Review of Reviews for July, 1891:

Long before university extension was heard of in this country, Chautauqua began to feel its way towards helpful relation between college men and the people. A step in this direction was the establishment of the College of Liberal Arts at Chautauqua Lake, not for the purpose of giving degrees, but for the sake of bringing advanced students directly under the influence of college teachers engaged for the summer season from different institutions. In a circular of the Chautauqua College, published in 1883, this interesting suggestion was made: "One may find in almost every nook and corner of our land representatives of colleges, universities and professional schools. They constitute an unorganized brotherhood, whose friendly aid is gladly given to those who, less favored, seek counsel in their search for culture. By conversations, candid criticisms, direct assistance, they put into the student's life the advantages of the teachers' living voice and magnetic influence. A number of students in the same locality may organize university classes, hold frequent meetings, occasionally employ special teachers, and thus may receive many of the benefits that belong to the college recitation room. Thus every student may have his "college council," and most of them the "college class."

Of course all such expedients are unsatisfactory without direct connection with college and university teachers, such as university extension now supplies. Dr. Vincent, the sympathetic leader of Chautauqua, visited England in 1880, and again in October, 1886. He was so impressed with the manifest growth of the extension movement that he resolved to urge a similar work in connection with Chautauqua. He wrote home to the registrar of the Chautauqua College of Liberal Arts, and a conference was held with Dr. Harper, the principal, as early as November, 1886. No practical steps were taken, however, until the summer of 1888, when the first definite American plan for Chautauqua university extension was drawn up at Chautauqua by Dr. H. B. Adams, with the approval of Bishop Vincent and his son and assistant, George E. Vincent, together with Dr. Harper, Dr. R. T. Ely, and Frederick Starr, who formed the principal central committee for the promotion of the new idea.

An elaborate prospectus stating the aims, methods, cost, and history of university extension was issued September 15, 1888, to prominent

[1] Forum, July, 1891, article on "University extension," by Dr. H. B. Adams.

educators and friends of the movement. The objects proposed were: (1) A revival in the United States of the original idea of a university as a voluntary association of students and itinerant lecturers for higher education by means of systematic courses of local lectures upon special subjects; (2) the promotion of good citizenship by the popular study of social science, economics, history, literature, political ethics, and the science of government, in continuous and progressive courses, under the guidance of competent teachers; (3) courses of instructive lectures upon natural science; (4) cooperation with American colleges and other institutions of learning in order to supplement their work by university-extension courses; (5) affiliations with public libraries, mechanics' institutes, lyceums, labor unions, guilds, young men's christian associations, Chautauqua literary and scientific circles; (6) the higher education of the American people by the organization of the most intelligent and progressive local forces.

The methods suggested were those of English university extension, comprising systematic lecture courses, a printed syllabus, class discussion, written exercises, and final examination. The system was to be under the general management of a central committee, selected from representative college and university professors, who agreed, upon request from the Chautauqua registrar, to "nominate candidates for itinerant lectureships from among the younger specialists who are personally known to be fitted for the task of popular teaching." It was hoped that local branches of Chautauqua would prove instrumental in organizing local courses of extension lectures. Several editions of the Chautauqua circular have been published since 1888 and widely distributed at the summer assemblies, where thousands of people congregate in July and August to hear popular lectures and good music, and to attend instructive class courses at the Chautauqua College of Liberal Arts. Undoubtedly much of the widespread popular interest in university extension, particularly at the West and South, has resulted from this early and persistent propaganda by the managers of Chautauqua. The educational results are seen in the increasing tendency toward instructive and continuous lecture courses in the numerous summer assemblies and at the central Chautauqua. These experiment stations might become good training schools for college graduates and young professors."

The function of Chautauqua in the educational system of the United States, as set forth by its promoters is compensatory and supplementary. It would not if it could supplant or compete with the institutions of the conventional type. It strives to do work which they either can not or have not attempted to do, and the result of the Chautauqua methods has been to increase the interest of the people in the college and university. Its underlying principle is that education is the privilege of all, young and old, rich and poor; that mental development is only begun in school and college, and should be continued through all of life. Its aim, therefore, is a double one. It would carry the benefits of intellectual enlightenment to those to whom circumstances have denied the privilege of attending the higher institutions of learning, and would provide for those who take the college course incentive for continual intellectual activity.

Chautauqua says, therefore [writes Chancellor Vincent in his *Chautauqua Movement*[1]], show the learned their limitations and the illiterate their possibilitities. Chautauqua pleads for a universal education; for plans of reading and study; for all legitimate enticements and incitements to ambition; for all necessary adaptations

[1] P. 5.

as to time and topics; for ideal associations which shall at once incite the imagination and set the heart aglow. * * * Show people out of school what wonders people out of school may accomplish. Show people no longer young that the mind reaches its maturity long after the school days end, and that some of the best intellectual and literary labor is performed in and beyond middle life.

II—CHAUTAUQUA ASSEMBLIES.

Chautauqua has been a prolific mother. Not the least important among the methods by which the extension of her influence has been effectuated has been the establishment of a large number of smaller assemblies in various parts of the country, at which are imitated on a smaller scale the exercises of the parent assembly at Chautauqua Lake. Of such summer Chautauqua centers there now exist somewhat over sixty. With scarcely an exception these assemblies have been held at popular summer resorts, and the actual duration of the assembly sessions has been from one to two weeks. In all cases the purpose has been double—primarily, instruction; secondarily, recreation. The comparative amount of emphasis laid upon these aims varies in the different assemblies. In some the amount of instruction given is very considerable, and covering a large number of subjects; in others the educational feature has been but slightly developed. The following information regarding these several summer meetings has been elicited in response to a circular addressed to their presidents, and containing the following interrogatories: (1) What are the subjects taught? (2) What methods of instruction are followed? Do you have courses of lectures on large subjects, or single lectures on varying topics? (3) What is the size of the assembly, the number of teachers, lectures, and students? (4) What is the object of the assembly—instruction or entertainment, or both? From a few assemblies no answer has been obtained.

The National Chautauqua at Glen Echo, Md.—The youngest child of its 17-year-old mother, Chautauqua, is the new assembly at Glen Echo, Md., which takes its name "national" from its location, being situated but 4 miles from the national capital.

The assembly is but one year old, its first session being held in the summer of 1891, but an immense amount of work has already been done in improving the grounds, and its first programme showed an excellence rivaled only by its parent at Chautauqua Lake. The indications are, indeed, that this new educational association, incorporated under the laws of Maryland, will in the very near future assume a position in the foremost ranks of institutions for popular instruction.

The site chosen is on the high banks of the historic Potomac, 4 miles above Washington, with which city it is connected by an electric car line. The grounds comprise about 80 acres, donated to the association for the purpose, and commands an extended river front. Several buildings have been erected, among them the amphitheater, the Hall of Philosophy, the Arcade, and the Red Cross buildings. The amphitheater is an immense building of granite, a perfect circle in form, and 200 feet in diameter, and has a seating capacity of 6,000. The Hall of Philosophy is likewise of Potomac granite, and besides containing a series of rooms for special classes possesses an auditorium with seats for 400 people. Regarding the character of these buildings, one of the lecturers there last summer writes me as follows:

The buildings which have been erected and are now in process of erection surpass by far in beauty, cost, and adaptability to their uses for which they are intended those of the old New York Chautauqua, and I was told by old Chautauquans, who have been everywhere, that they surpassed anything to be found at any Chautauqua in this country.

One of the most serious drawbacks to the success of the first session was the lack of adequate transportation facilities from Washington. The management have, however, promised that before the opening of the next session a line of the Baltimore and Ohio Railroad will be running to the very gates of Glen Echo, and that a number of steam packets will be running on the Chesapeake and Ohio Canal, which runs through the grounds. The following account of the session of 1891 has been kindly furnished by Dr. A. H. Gillet:

The National Chautauqua of Glen Echo is the corporate name of a new educational association formed for the purpose of conducting an annual assembly and summer school on the plan of the famous Chautauqua of western New York. The site selected is on the banks of the Potomac midway between Washington and Great Falls. Ample buildings have been erected at a cost of $160,000, and water supply, sewerage, and electric lighting provided at a cost of $100,000 more. The grounds were donated to the association by Messrs. Edwin and Edward Baltzley, who have also borne the largest share in the expense of preparing for the first session. The officers of the association are: President, Mr. Edwin Baltzley; chancellor, Dr. A. H. Gillet; secretary, Linson De F. Jennings; treasurer, Edward Baltzley. The location is such, the buildings so fine and so well adapted to the purpose, and the success of the first session so complete, as to raise great expectations as to the future of this admirable institution.

The following is an outline of the work done during the first annual session, June 16 to August 1, 1891.

(1) *Amphitheater entertainments.*—These include lectures, stereopticon entertainments, readings, and platform meetings. Of these, 54 were given.

(2) *Concerts.*—These included chorus concerts, band concerts, concerts by vocal and instrumental talent and piano and organ recitals; and numbered altogether 34.

(3) *Courses of lectures.*—Two in literature, 1 by Mr. Leon H. Vincent, of 5 lectures, and 1 by Mr. Robert Niven, also of 5 lectures; 1 in American History by Miss Jane Meade Welch, of 6 lectures; 1 on political economy by Dr. W. A. Scott, of 6 lectures; and 1 on English political leaders by Mr Robert Niven, of 3 lectures.

(4) *Studies in Shakespeare.*—Miss Imogen S. Pierce conducted a class 5 hours per week, for 3 weeks, in the study of Shakespeare's plays. Midsummer Night's Dream, Macbeth, and the Merchant of Venice are the plays through which the class went with some degree of thoroughness.

(5) *Biblical literature.*—In this department, during the first 3 weeks of the assembly session, classes were taught in Hebrew and New Testament Greek. Two courses of lectures were delivered, 1 on Old Testament history by Prof. George S. Goodspeed, and 1 on the gospel of John by Dr. F. K. Sanders. Supplemental to this work Dr. George Elliott, of Washington, delivered 6 lectures on Biblical subjects and 7 on normal methods as applied to Sunday-school and church work.

(6) *The schools.*—Practical class work has been successfully conducted in the industrial-art department by Prof. J. Liberty Tadd; in the various departments of business by Prof. and Mrs. S. H. Spencer; in French and Italian by Prof. J. P. des Garrennes; in Latin and mathematics by Prof. F. A. Springer; in music by Prof. Mark C. Baker; in Delsarte by Miss Gwyneth D. King; and in physical training by Prof. J. W. Sims.

(7) *Other work.*—In addition to what is enumerated above, special attention was given to young people's work. Mr. W. H. H. Smith concluded a series of very helpful meetings, spending a part of each hour in devotional service and the remainder in the study of the best methods of doing such work.

(8) *C. L. S. C.*—Round tables were held as often as circumstances would permit, and a recognition service was conducted at which 11 people were "recognized," 6 receiving their diplomas. An "office" was kept open. Circulars, blank forms of application, and copies of the Chautauquan were distributed.

(9) *Sunday services.*—Among the most pleasant memories of the first session of the Glen Echo Chautauqua will be the restful Sabbath hours, able and thoughtful sermons, inspiring music and the devotional spirit, ministered to by all of the associations of the day and place. The Sunday school for the study of the Word and the Chautauqua Sunday vesper services both contributed much to the value of these days of rest.

In the work of this first session the association has had in its employ for the entertainment and instruction of the public 304 musicians, besides the registered chorus of 900 singers, 60 lecturers and readers, and 17 teachers, making a total of 441 different people who in one way or another have contributed to the success of the first programme of the Glen Echo Chautauqua.

Plans are already maturing for the work of the Glen Echo Chautauqua for 1892. An elaborate programme will be provided covering the various lines of summer-school

work. The ablest teachers to be had will be chosen and nothing omitted to make it the equal of any similar institution in the quality and character of its work, as it is now the best equipped with buildings and facilities.

Acton Park, Indiana.—The annual session of Acton Park Assembly for 1891 opened July 22 and closed August 10. Properly speaking, the yearly gatherings at this place have been of a camp-meeting character for religious purposes, but from year to year days have been set apart for Chautauqua work. Lectures upon various topics have been delivered, classes organized for study, and diplomas delivered to graduates.

Bay View, Mich.—Bay View is in northern Michigan, on Little Traverse Bay, out of Lake Michigan, and a mile above the city of Petoskey. It is entirely a summer city of 400 or more cottages and hotels, besides 7 halls of the Bay View Summer University.

In 1876 Bay View was founded, and in 1886 the assembly and summer university were organized. In the assembly instruction is the principal object, though entertainment is also used to interest. The general programme is itself a popular school, and courses of lectures on large subjects are a prominent feature. Lectures for entertainment are used sparingly. Besides the general programme there are several departments, notably the Woman's Christian Temperance Union School of Methods and the Bay View Missionary Institute, each holding almost daily sessions, where by lecture and exposition leaders instruct workers and members in these organizations. These departments are believed to be of great practical value. In addition the Women's Council, the Press Club, and a series of meetings conducted by the Young People's Society of Christian Endeavor and the Epworth League constitute popular schools where ideas are exchanged and leaders with ideals and ideas are heard in programmes specially arranged to arouse and instruct. The university has nine departments: college of liberal arts, Bible school, school of art, school of music, schools of elocution, physical culture, photography, business, etc. The faculty numbers 32, including instructors, and the attendance is between 400 and 500. The methods of instruction are mainly by lecture and practical work. The subjects taught are those usually included in the schools named. The attendance at the assembly is about 12,000 during the season. The university term is usually from the middle of July to the middle of August, and the assembly session begins one week later than the former, closing with it. The announcements for the session of 1892 contain the information of the acceptance of the principalship of the university by Dr. Richard T. Ely, late of the Johns Hopkins University, at present professor of economics at the University of Wisconsin. The department of social science is to be further strengthened by the coming of Prof. David Kinley. Among other new men secured by the Bay View Assembly are Prof. James A. Woodburn, of the University of Indiana, who will conduct courses in American history, and Prof. H. M. Magoun, whose work will be in the classes.

In connection with the Bay View Assembly is published a quarterly magazine entitled, The Bay View Assembly Herald.

Beatrice, Nebr., and Mountain Lake Park, Md.—These two assemblies are under the same management. Concerning them Mr. W. L. Davidson, D. D., the superintendent of instruction, gives the following facts: The subjects taught are Sunday-school normal classes in senior and junior grades, elocution, kindergarten, physical culture, modern languages, astronomy, art, microscopy, music, and ministers' institute (ten days' session with lectures along Biblical lines). The instruction is by

daily classes, courses of lectures on large subjects, and often single lectures on varying topics. Over 25,000 people visited the Beatrice Assembly during the last session, and over twice that number the assembly at Mountain Lake Park. Classes have averaged from 25 to 100 students.

Black Hills, South Dakota.—The Black Hills Chautauqua Assembly gives instruction in the Bible, music, natural sciences, history, and literature. About one-half of the time allotted to lectures is devoted to courses of lectures on large subjects, the other half to single lectures on varying topics. At the last session there were 6 teachers, 12 lecturers, and about 150 students. The session lasted from August 11 to August 26. The town of Black Hills is built around the famous Hot Springs of South Dakota, the curative powers of whose waters attract a yearly gathering of 10,000 people.

Bluff Park, Iowa.—The assembly at this place has not been organized into a school, with its classes and corps of teachers, nor is there a record of attendance kept. General instruction, however, on biblical subjects, is given daily, and there are occasional lectures on varying topics.

Chester, Ill.—The Southern Illinois Chautauqua at Chester held its first session in 1891, and is the first one ever conducted by a woman. The opening session was successful, several schools were formally begun, and the attendance increased from 500 at the beginning to nearly 1,200 on the closing night.

Immediately at the close of the assembly a charter was applied for and preliminaries of permanent organization effected.

Clarion, Pa.—The subjects taught at this assembly, held at Reynoldsville, Pa., are English branches, Latin, Greek, Hebrew, and German. There is also an Itinerant's Club department, a Chautauqua Literary and Scientific Circle, and a Chautauqua Normal Union department. The instruction is by classes and single lectures on varying topics. The attendance of students has been about 100 and the corps of teachers has averaged 10. The object of the assembly has been, primarily, instruction.

Connecticut Valley, Northampton, Mass.—The fifth session of the Connecticut Valley Sunday School and Chautauqua Assembly was held in 1891 at Laurel Park. The subjects systematically taught were music, elocution, primary, intermediate, and normal work in Bible teaching. In the subjects named there were special instructors. The work of these teachers was supplemented by single lectures on many subjects. The instructors numbered 6, the lecturers 27, and there were 100 students enrolled. The attendance at the lectures reached as high as 2,000 in some cases.

Council Bluffs and Omaha Assembly.—The subjects taught are: Music, Bible, and pedagogics in classes, and a wide variety of other subjects in popular lectures. At the last session a special course on literature and comparative religions was given on the university extension plan. The attendance at the session of 1891 was 5,000 at the lectures, and from 20 to 150 in each of the classes. There were 8 teachers and 20 lecturers.

East Epping, N. H.—For six years a Chautauqua assembly has been held at East Epping. At the last session instruction was given in French, German, vocal music, water color and oil and china painting, shorthand, and typewriting. There were Sunday school normal and children's Bible classes, and lectures, concerts, and religious meetings every evening.

Epworth Heights Assembly, Ohio.—Subjects taught: Music, elocution, fine arts, painting, china decoration, etc., stenography, typewriting.

photography, cookery, physical culture, Sunday-school normal studies. Methods of instruction: By class work and lectures. Attendance: From 2,000 to 3,000; 20 teachers and 150 students.

Florida Chautauqua.—The Florida Chautauqua is situated at De Funiak Springs, Walton County, and is one of the most successful of these institutions organized on the plan of the parent assembly in New York. The subjects taught in classes are: The Bible, arts, music, kindergarten, pedagogy, elocution, physical culture, and stenography. During each session there are given several courses of lectures on literary and social topics. The programme for 1891 shows, for example, that a course of 6 lectures on "Labor and property" was given by Dr. Washington Gladden, and another course of 4 lectures on "Astronomy" by Prof. H. N. Felkel. At these lectures the university extension plan was followed of distributing to the audience printed outlines, and closing with a written examination. Besides these courses there were a large number of single lectures on different subjects. At the session of 1891 there were 12 teachers, 40 lecturers, and an attendance of 4,000.

Fremont, Nebr.—The Central Chautauqua Assembly, at Fremont, Nebr., held its first session June 23 to July 6, 1891.

Permanent improvements consisting of an auditorium with a seating capacity of 3,000, 12 other buildings, and a hotel have been made. The general work of the assembly for its first year consisted of 47 lectures and addresses; 40 hours of normal work, 40 hours given to the Teacher's Retreat; 17 hours to chorus work; 10 hours to Young People's conference, besides the regular work of the Round Table held each day and a W. C. T. U. School of Methods.

Georgetown, Tex.—The first session of this assembly was held in 1891, and had sufficient success to place it beyond the experimental stage. The assembly session lasted from July 1 to July 15.

Georgia Chatauqua.—This assembly held at Albany, Ga., confines its instruction to the departments of music, physical training and commercial law and bookkeeping, in which the enrollment of students has averaged 600 yearly.

Hedding Chautauqua, New Hampshire.—The Hedding Assembly is auxiliary to the Chautauqua University at East Epping. The subjects taught are French, German, voice culture, oil painting, and crayon work, shorthand and typewriting, cooking, Sunday-school normal work, and juvenile science. These subjects are taught in classes, and there are occasional lectures. The number of teachers at the session of 1890 was 10. There were 45 lectures given and an enrollment of over 200 paying students. Those in attendance upon the lectures averaged 800 in number.

Colfax, Iowa.—The Iowa Chautauqua Assembly at Colfax held its third session in 1891. The subjects that have been taught are, Evidences of Christianity, music, political economy, physical culture, history, biography, science, literature, art, and ethics. Instruction has been by class work, and by lecture courses on large topics and separate addresses on varying subjects. At the last session there was an average of 4 lectures or entertainments per day for ten days.

Island Park, Indiana.—The Island Park Chautauqua held its thirteenth session in 1891. There were 12 organized classes. Instruction was given in the following subjects: Fine arts, languages, English literature, elocution, physical culture, kindergarten, and normal classes. Numerous lectures on various subjects were given by prominent men. The average daily attendance in the auditorium was 2,000.

Kansas Chautauqua.—The Kansas Chautauqua Assembly has met each summer at Oakland Park, near Topeka, for seven years, holding annually a 10-days' session, with normal classes for study of the English Bible, training classes for instructing Sunday-school teachers in approved methods of teaching; classes—part of the time—in elementary Greek and Hebrew, in elocution and literature, with lectures on popular subjects, intended for entertainment as well as instruction; stereopticon tours, concerts, classes in music, etc. Missionary conventions and councils of the Woman's Christian Temperance Union have also been held sometimes in connection with the assembly. The instruction has been done chiefly by lecture-lessons, with blackboard outlines. The normal classes have brought together about 200 students; the popular lectures have been attended by audiences which sometimes reached the number of 3,500. The present corps of instructors numbers 12.

Kentucky Assembly.—The Kentucky Chautauqua Assembly has been in existence for five years. Instruction is given in Bible studies, normal training, W. C. T. U. work, and music. "We have as yet only begun our educational work," writes the superintendent, "but our design is to begin to develop this work, especially in the line of university extension courses. We had an audience last year of 20,000 people. The number of lecturers, teachers, and workers was 30.

Ottawa Chautauqua Assembly.—Regarding the work of these three assemblies, their superintendent, Dr. J. L. Hurlbut, writes the following letter:

I have charge of the above assemblies and all of them are conducted substantially upon the same plan.

At each assembly we hold daily classes, at least 2 hours a day, for the study of the Bible and the best methods of Sunday-school work. We have also children's classes for Bible study, and an examination upon it at the close of the session. We have a chorus organized consisting of from 100 to 300 singers, which receive training from 2 to 4 hours every day. We have also a class at most of the assemblies named above of from 100 to 200 members in English literature.

The afternoon and evening platform exercises are of a popular character intended to draw the crowds, but literary lectures we find are the most popular. Three thousand or 4,000 listened to each of Gunsaullus's historical lectures last summer.

The Ottawa Assembly last summer had over 2,000 people attending its daily classes, with about 10 instructors, and the lecture platform embraced about 10 lecturers.

The Nebraska Assembly had, perhaps, 1,000 attending its several classes, with half as many instructors as at Ottawa.

Lake Tahoe, California.—The Lake Tahoe Assembly is a new enterprise, and but two sessions have been held. As thus far developed, there are schools of history, language, natural history, and theological department of methods. At the session of 1890 there were 10 lecturers, 6 teachers, and 150 students.

Lakeside Assembly, Ohio.—The following letter from the secretary explains the character of the work of this assembly:

There is taught the "Bible normal course," science, art, literature, temperance, political economy, history, biography, and every subject that comes in the line of popular lecture courses. We have kindergarten and normal schools, music, and elocution.

We have both "courses of lectures on large subjects and single lectures on varying topics."

The average attendance at lectures is probably 1,500 at the three popular hours—10 a. m., 2.30 p. m., and 8 p. m.; at the odd hours, of course a much less number. In the special classes say, an average of 20.

Our object is to instruct and entertain as well as furnish a healthful resort. Our camp meeting, held at consecutive date, is under the management of a board of trustees, appointed by five conferences of the Methodist Episcopal Church, and is as well attended as the other.

Long Beach, Cal.—Long Beach Chautauqua Assembly, held at one of the summer resorts on the Pacific coast, has afforded instruction in Sunday school normal work, art, cookery, oratory, music, photography, and kindergarten. In addition, there have been numerous lectures. For four years, also, the Epworth League Assembly has held its annual camp meeting in connection with the assembly, and under its auspices has been conducted a school for the study of the English Bible. Sessions of the Southern California W. C. T. U. Assembly and School of Methods have also been held at Long Beach.

Long Pine, Nebr.—The assembly at Long Pine teaches the Bible, political science, natural science, temperance, pedagogy, and music, with the C. L. S. C. a specialty. Lectures are given on various subjects, and there is daily class instruction. There are from 10 to 12 teachers and 18 or 20 lecturers employed at each session. The students number from 200 to 300, and the attendance ranges from 500 to 2,000.

Monona Lake, Wisconsin.—The instruction at this assembly embraces the following subjects: The Bible, pedagogics, vocal music, and elocution. This work is supplemented by lectures, both single and in courses. The daily attendance has been from 1,500 to 6,000. Five teachers have been employed, the number of lectures has averaged 40, and the attendance of students over 400.

Mont Eagle, Tenn.—The following letter of the superintendent gives an outline of the work of this assembly:

Our assembly embraces two features—the schools and assembly platform. In the schools are taught the branches needed by teachers of the various schools in the South, embracing ancient and modern languages, English, mathematics, sciences, pedagogics, music, and art.

Both methods are used. Single lectures, course lectures, and class instruction are used.

The assembly and schools run through two months; more than 60 lecturers and teachers were employed last year, and the average daily attendance 800 to 1,000 persons.

The object is to entertain and instruct, furnishing instruction on the leading religious and popular topics of the day.

Northern New England, Maine.—The instruction at this assembly, which holds its annual sessions at Fryeburg, is given almost exclusively by means of lectures of which there are a considerable number. Systematic instruction, however, is given in oratory, Delsarte sciences, normal methods, and cookery.

Ocean City, N. J.—Concerning the work of this assembly its president writes as follows:

We do not make it a business to form classes and go through professional instructions. We have exercises of a religious character; C. L. S. C. round tables; recognition day, when we give the C. L. S. C. diplomas sent to us from Dr. Vincent to those who have earned them; lectures, camp-fire services, and other services pertaining to Chautauqua work. Our lectures are on single subjects. Our audiences vary from 100 to 300 on week days to 500 on Sundays. Our object is to entertain along educational lines and to stir up interest in Chautauqua educational methods for those who can not go to regular schools.

Piasa Bluffs, Illinois.—The subjoined letter sufficiently describes the work of this assembly:

Our programmes have been general, but we have so far given most attention to Sunday-school normal work, and to the Chautauqua literary and scientific circle.

Our methods have been the normal drills, round-table conversation, and lectures. So far we have had only single lectures on varying topics.

The attendance varies from 150 to 1,000. There have been but 2 regular teachers, Rev. C. J. W. Coxe, D. D., in charge of the normal work, and myself. [Rev. Frank Lenig, PH. D.] in charge of the C. L. S. C. work. Last year there were about 40 in the normal class, and about 25 Chautauquans.

We propose both instruction and entertainment. The assembly is only about three years old, but its prospects are good. New departments will be added this year, and a week will probably be given to an itinerant club.

Piedmont Chautauqua, Georgia.—The Piedmont Chautauqua, which holds its session at New Atlanta, rests upon a substantial basis, having over $100,000 invested in buildings and park. The subjects taught are language (German, French, and English), English literature, general history, pedagogy, physics, biology, botany, mineralogy, vocal and instrumental music, art, physical culture, elocution, business, and kindergarten. The methods of instruction include class work, conversational lectures, and lecture courses on such large subjects as English literature, Egyptology, and the Bible. The number of teachers has averaged 20, the lecturers 40, and the audiences have ranged as high as 3,000.

Riverview, Ohio.—The Riverview Assembly has held three summer sessions at New Richmond, Ohio. The first season a full course of studies was conducted, but since then instruction has been limited to single lectures on detached subjects. Audiences have ranged from 1,000 to 2,000.

Rocky Mountain, Colorado.—The following letter gives the essential points regarding this assembly:

The Rocky Mountain Chautauqua Assembly, held at Glen Park, near Palmer Lake, Colo., is a summer school, which continues about three weeks each summer, beginning the second Wednesday in July.

The subjects taught are: (*a*) Lessons on the construction, origin, evidences, history, geography, institutions, and interpretation of Scriptures, and upon the organization, management, and teaching in Sunday schools; (*b*) Popular course of instruction in botany, geology, astronomy, and such history as may be in current line of C. L. S. C. reading; (*c*) Round table, taking up such subjects as are being or have recently been considered in the C. L. S. C. readings.

We adopt, as methods of instruction, lectures and examinations, and in the normal department a course of study and recitation. We also have a course of platform lectures of popular character on all subjects that the lecturers may select from.

The number of teachers and lecturers at each assembly will probably average about 30. Enrolled students average, say, 100, but of those in attendance, 1,500.

Our assembly is principally for instruction, but we combine with it entertainment.

San Marcos, Tex.—Instruction at the San Marcos Assembly includes, (1) the course of study prescribed for the C. L. S. C.; (2) in its teachers' summer normal institute, the course of study prescribed for the public free schools of Texas. There are both courses of lectures on large subjects and course lectures and illustrations on select and varying subjects and class work. There are also Sunday school normal lectures and class work. Elocution, various branches of art, kindergarten are also taught. The membership of the institution is about 200, and the teachers at the session of 1891 numbered 13 and the lecturers 22. The object of the assembly is, first, moral and religious instruction; second, social entertainment. At session of 1891 the assembly more than cleared expenses, besides raising $1,250 for a hall of philosophy.

Silver Lake, N. Y.—The subjects taught are theology, conference studies for young men entering the ministry, normal Biblical studies, school of English Bible, Hebrew, Greek, Latin, French, German, English literature, oratory, stenography, typewriting, and music. Theology, conference studies, and English Bible are taught in lectures, the others in schools. The "natural method" is employed in the languages. The regular teachers number 12, the lecturers about 15, and in all departments there are enrolled 400 students.

San Antonio, Tex.—The subjects embraced in the instruction given at the Texas Chautauqua at San Antonio are the Bible, music, elocu-

tion, Sunday school normal training, secular normal school, and the C. L. S. C course. The lectures are usually on various detached subjects, though occasionally longer courses on large subjects are given. The teaching force has averaged from 12 to 15, with as many lecturers in addition.

Waseca Assembly, Minnesota—This assembly dates from 1884, and during the eight years of its existence has had remarkable success. A full equipment of buildings and facilities for every kind of assembly work have been provided. An auditorium tabernacle, hall of philosophy, and normal hall have been erected. The assembly now includes 9 general departments and more than 20 special classes. The subjects taught are: Music, French, German, shorthand, botany, biology, astronomy, microscopy, history, crayon work, bookkeeping, and typewriting, Sunday-school normal work, pedagogics, and theology.

Waseca Assembly is the northwestern headquarters for the C. L. S. C., and special attention is paid to C. L. S. C. work. Besides these branches of work there are an Itinerants' Club of the Minnesota Annual Conference, and an Epworth League Training Institute.

Wiers, N. H.—Regarding the Winnipesaukee Lake Assembly, which has held five annual sessions at Wiers, N. H., the president writes as follows:

> The subjects taught are those treated in the C. L. S. C. work, the Bible, and music. We have both courses of lectures and single lectures on varying topics. The average attendance of members may be put at 300, but the visitors are many more. The average of lecturers and teachers may be put at 12. Our main purpose is instruction, but we give entertainments also.

Concerning the following assemblies no information has been obtained: Lake Bluff Assembly, Illinois; Lake Madison, South Dakota; Langdon Assembly, North Dakota; Hiram Assembly, Ohio; Missouri Assembly, Warrensburg, Mo.; Mountain Grove, Berwick, Pa.; Niagara Assembly, Canada; Ocean Grove, N. J.; Ocean Park, Me.; Pacific Coast Assembly, Monterey, Cal.; Puget Sound Assembly, Washington; Round Lake, N. Y.; Seaside Assembly, Key East, N. J.; Winfield, Kans.; Southern Illinois; Gerhart Springs, Clatsop, Oreg.; Warsaw, Ind.; Weatherford, Tex.; Ridgeview, Pa.

III.—THE MARTHA'S VINEYARD SUMMER INSTITUTE.

The summer institute that has been held on Martha's Vineyard since the summer of 1878 is to-day one of the leading and most flourishing institutes for summer instruction in the United States. Together with the great experiment at Chautauqua Lake, it occupies a position in modern educational movements that will render a detailed description of its work the best commentary that can be given upon that phase of popular instruction, which it is the purpose of this monograph to describe.

The following account of this institution has been adopted from a sketch very kindly furnished by its present president, William A. Mowry, PH. D.

The school was started in the summer of 1878. The originator and first president of the enterprise was Col. Homer B. Sprague, PH. D., at that time the head master of the girls' high school in Boston. He first selected the place, interested others in the scheme, put the plan in

operation, and carried the institution forward until it was incorporated under the laws of the Commonwealth of Massachusetts, and became one of the permanent educational institutions of the Old Bay State, and secured a fine building adequate for the purpose, where sixteen recitations could be conducted in the same hour. Dr. Sprague himself thus describes the beginning and first few years of the school:[1]

The Martha's Vineyard Summer Institute originated in a very humble way. For a number of years, beginning with 1871, my friend Prof. Ellinwood and myself had spent the greater part of the summer at the Vineyard, and we had often discussed the possibility of establishing a summer school on the island. There was no question in our minds as to the desirability of well-directed mental employment on the part of thousands of teachers and others, during a portion of the two or three months of the long vacation. What to do, and how to do it, in founding such an institution, was the problem. To us, after much meditating, it seemed best, at last, to invite a number of eminent teachers to join us in issuing an announcement of classes, to be formed at Cottage City (then Vineyard Grove), in July, 1878, and to be continued five weeks. If successful, the work could be repeated in future years, and possibly a large and permanent institution might grow out of it. If unsuccessful, no serious harm was anticipated, and it would be gratifying to have deserved to succeed. No large pecuniary return was looked for; but it was hoped that scores and hundreds of students would be materially aided, and that valuable service would be rendered to the cause of education. The healthfulness of the island, its quiet beauty, its accessibility yet seclusion, its facilities for bathing, its innocent recreations, and especially its traditionally religious character and its wholesome moral influences seemed to make it of all spots the fittest for such an enterprise.

The plan adopted allowed of indefinite expansion. Any study in which satisfactory work can be done, or even a satisfactory beginning can be made, or a satisfactory course of lectures or lessons given, during five weeks, might be admitted, provided a competent professor could be found to take charge of the special branch. Each professor was to have complete liberty to manage his department in his own way so far as it could be done without injury to his associate professors or to the general interests of the institute. A uniform rate of tuition, $15 in each department, was fixed upon, and each professor was to receive as compensation for his services the tuition fees paid by his own students. The professors were to share equally the expense of advertising by joint circulars and by joint cards in the newspapers, but each professor was at liberty to advertise further his special classes. The common interests of the institute were to be managed by the professors assembled as a faculty of instruction and government or by the president acting for all.

As bonds of union among the students as well as among the professors, all members of classes and of professors' families were to be admitted free of cost to public lectures and entertainments by distinguished men invited by the institute. These were to be paid by admission fees from all persons not connected with the school. The professors also were at liberty to deliver public lectures, receiving as their compensation the proceeds of tickets sold to persons not members.

For such lectures, readings, or concerts the institute was to provide a hall and pay the expense of tickets and handbills, but the lecturer or other performer was to be at his own charges and his own risk as to receipts. The giver of the entertainment was at liberty, under proper limitations, in his discretion and at his own expense, to resort to other means of advertisement.

Further to unite the members of the institute and promote social enjoyment, weekly receptions and excursions were arranged, the former taking place on Friday evenings and the latter on Saturdays.

The general plan of operations, allowing to each department independence in all local matters not affecting immediately the common interests, yet combining for central direction in all things in which the general welfare of the institute is concerned, has prevailed until the present time. The forenoons are mostly given up to class exercises, the afternoons and evenings to public lectures and entertainments, Friday evenings to receptions, and the whole of Saturdays to excursions and recreation. The election by a student of two or more studies has been permitted but not encouraged. When interferences have occurred between hours of recitation, the same student being due at two places at once, the matter has been amicably arranged by the professors in charge of those classes, or, in case of irreconcilable diversity of opinion, by the president of the institute.

In the fall of 1877 and winter of 1877-'78, after much consideration, and after consultation with many eminent gentlemen, the following instructors were induced to join in the work:

[1] Summer Institute Herald (published by the institute), July 21, 1882.

In botany, Prof. William R. Dudley, of Cornell University; in entomology, Prof. B. Pickman Mann, of Cambridge; in French, Prof. Philippe de Sénancour, of the Boston Latin School; in geology and mineralogy, Prof. L. S. Burbank, of the Boston Society of Natural History; in German, Madam Marie Mehlbach, of Auburndale; in industrial drawing, B. W. Putnam, of Jamaica Plain; in Latin and Greek, J. M. Tetlow, of the Girls' Latin School, Boston; in microscopy, Dr. Ephraim Cutter, of Cambridge, and Dr. Paulus Reinsch, of Munich; in pedagogics, Prof. J. C. Greenough, of State Normal School, Providence, R. I.; in zoology, Profs. William B. Dwight, of Vassar College, and A. C. Apgar, of the State Normal School at Trenton, N. J.

After several unsuccessful attempts to secure a desirable professor to take charge of elocution, that department, as well as English literature, was placed under my own care. A public meeting was held in the Union Chapel the day before the beginning of the session, and the different professors successively stated to the audience the course in their several studies. Mrs. Abba Gould Woolson was engaged to deliver a course of 10 public lectures on historical and literary subjects, and Prof. Robert R. Raymond gave 10 public Shakespearian readings. Mrs. Woolson was prevented by ill health from fulfilling her appointments. Mr. Tetlow delivered two public lectures on Latin pronunciation, afterwards printed in the N. E. Journal of Education; Mr. William Marshall, 1 on an "An evening in wonderland;" Mr. Apgar, 2 on "Life in the sea;" Mr. Dudley, 1 on botany; Mr. Putnam, 4 on "Keramics and the potter's wheel;" Mr. Mann, 1 on insects, and Mr. Sprague, 4 on Shakespeare, Milton, and Goldsmith.

Of the departments just mentioned, that of entomology was not begun, Mr. Mann, the professor in charge, having married just four days before the institute opened; that of microscopy (or micrology, as the professor preferred to style it), which was to have been located at West Falmouth, was discontinued by reason of the nonarrival of students till after the departure of Dr. Reinsch; and that of pedagogics or didactics, which, owing to the modesty of Mr. Greenough, had been much less advertised than the rest, was also suspended. The other departments continued in successful operation till the close of the session. About 80 students were registered during the first summer, that of 1878.

At the close of the first session a strong feeling of satisfaction at the degree of success attained under unfavorable circumstances was generally manifest, and found expression in earnest resolutions unanimously adopted at a large meeting of the students. At the annual meeting of the faculty in August, Messrs. Sprague, Ellinwood, and Putnam were severally elected president, treasurer, and secretary, and it was resolved to hold another session in the following summer.

The attendance at the second session was about double that of the first year. Botany, English literature, geology, and mineralogy, French, German, industrial drawing, Latin and Greek, phonography, and zoology were taught by the same instructors, respectively, as during the first session. A department of history was added under the care of Prof. H. S. Mackintosh.

The third session, that of 1880, saw many changes in the faculty. A department of music was established. Astronomy and didactics were also added to the list of courses. The attendance was smaller in numbers, but, perhaps, of a higher average quality than the preceding year.

The fourth annual session, that of 1881, witnessed other changes in the faculty, and several new studies were added, namely, Anglo-Saxon, paleontology, and microscopy. Numerous public lectures also were given. The opinion was quite generally expressed that, on the whole, this fourth session of the institute had been the most interesting and profitable since the foundation.

But the inconveniences to which we were subjected by the lack of an institute building, though reduced to a minimum by the generous hospitality of the people of Cottage City, seemed from the outset to threaten the prosperity, if not the existence, of the school. Efforts had been unceasingly put forward to secure permanent quarters for the classes, a permanent home for the organization. One after another promising plans failed. Some discouragement was natural after these repeated failures, and one professor seriously proposed to his associates to remove the school to Plymouth, Mass.; to abandon it was not to be thought of. But among all our disappointments we had always one resource to fall back upon. We knew that from year to year there had been in the minds of the residents and visitors at the Vineyard a growing sense of the importance of the institute, and that its permanent establishment by their voluntary contributions, if in no other way, was but a question of time. Happily, one of our number, Mr. Putnam, had the leisure, the disposition, and the ability to give his energies to the important work of soliciting subscriptions. Other professors aided. The results were most gratifying. Within two weeks about $3,000 had been subscribed by about 120 donors. It remained to become a corporation under the laws of Massachusetts, with power to hold property. A meeting of directors for that purpose was held about the 1st of September, 1885, and the proper officers were elected.

The above sketch by Col. Sprague (continues Dr. Mowry) leaves us in the spring of 1882, at the time of his resignation of the office of president. Prof. William J. Rolfe, LIT. D., the well-known Shakespearian critic and writer upon English literature, was unanimously chosen president. He served the institute six years, from 1882 to 1887, inclusive.

The building of a large, commodious, and substantial edifice for the exclusive use of the institute was a great work. The heavy burden of this enterprise fell upon Prof. Benjamin W. Putnam, who for many years was the clerk and general business manager.

In the New England Magazine for July, 1887, the leading article is entitled "The Martha's Vineyard Summer Institute." This article is believed to be largely from Mr. Putnam's pen, and that portion which relates to the years 1882 to 1887, inclusive, is here reproduced:

On the 13th of February, 1882, Col. Sprague tendered his resignation as president, impelled thereto by "ill health and a press of other duties." As he made this positive, the directors were compelled to accept it. Prof. William J. Rolfe, the vice-president, was unanimously elected to fill the vacancy. Of him the retiring president said to the directors: "You are fortunate, indeed, to secure the services of one who has achieved success in both science and literature; one whose fame, through his works, is not only national, but international."

The erection of a spacious and convenient building on a cool and commanding site gave a new impetus to the good work, which was apparent in the increased attendance at the opening of the session of 1882. The building was dedicated with appropriate services, the former president, Col. Sprague, delivering the dedicatory address.

The comfort of the new building, with the various appliances of a schoolhouse, was fully appreciated by those who, for four years, had struggled on without them. One large room is made extensively useful as a reception room, where students can meet for social intercourse, to read and write; where, also, are displayed on shelves the various new text-books of the year, sent by the publishers for examination; and where all other necessary school supplies are kept for sale.

In 1882 the directors decided to publish a paper, which was issued under the name of the "Institute Herald." This paper, under the energetic management of Dr. William F. Morrison, of Providence, son of the treasurer, was a success, and aided in making the institute better known, not only in the immediate vicinity, but throughout the country.

During this session, the department of history was most ably conducted by Dr. Charles K. Adams, now president of Cornell University. Dr. W. A. Brownell, of Syracuse, took charge of the department of mineralogy and has continued to fill that chair most acceptably to the present date. The German department was in charge of Prof. Hermann B. Boisen, author of some valuable text-books. The Shakespearian readings of Prof. R. R. Raymond had become very popular, and large audiences gathered to enjoy his renderings of the plays of the great poet. The course of geological lectures, by Dr. Alexander Winchell, was enjoyed by throngs of delighted listeners.

The season of 1883 was one of continued prosperity for the institute. The erection of two buildings for the accommodation of the musical department, marked the outward growth, and relieved the already crowded rooms of the main building by furnishing accommodations for the large class in vocal music, under Prof. Daniell, and that in the pianoforte, under Prof. Howard.

The department of didactics was, during the sessions of 1882 and 1883, in charge of Col. F. W. Parker, at that time one of the supervisors of the Boston schools. In the year 1883 a fair in aid of the institute was held in Agassiz Hall, under the charge of the wives of the professors, and a considerable sum of money was raised to meet obligations that had been incurred in the furnishing of the building. Another fair was held in the Union Chapel the following year, but a severe storm and other causes combined to make it much less successful than the first.

This year the department of pedagogy was in charge of Prof. H. H. Straight, of the Cook County Normal School, Chicago, Ill.

The department of philosophy was in charge of F. Louis Soldan, principal of the St. Louis Normal School, with Dr. William T. Harris of Concord, as lecturer. The department of physical culture was conducted by Dr. Dio Lewis, of New York. The most noticeable improvement in what may be termed the plant of the institute this year was the erection of a building for a café, where the students who are obliged to lodge at some distance can take their meals with convenience. This plan is found to be both economical, affording board at a lower rate, and advantageous

also in a social way, bringing the students more together and promoting good feeling and a fraternal spirit.

The ninth year (1886) saw but few changes in the faculty, the most noticeable being that in the chair of elocution, which was filled by Dr. S. S. Curry, dean of the Boston School of Expression, who endeared himself to those under his immediate charge to a remarkable degree.

We may add, in a general way, that each year, profiting by the experience of the past, the directors have been able so to systematize matters that work can be begun the first day of the session and continue uninterruptedly till the close, which, by a recent vote, may not be till the sixth week. It is proper also to state that, as this is a school established primarily for teachers, the members of the faculty take especial pains to teach methods, not only by precept, but by example, in imparting a knowledge of their own subject. Pedagogy, the science of teaching, has always been a prominent department. They hold that if they fill a pupil full of his subject he will gain the ability in which he can best teach it. It is a pleasure to teach a subject we know and know we know. It is misery to try to teach a subject we do not know and know we do not know.

At the session of 1887 (continues Dr. Mowry) I had my first experience in a summer school. I had a strong prejudice against this class of institutions. I had felt that if one wished to become a teacher he had better attend a good normal school for two or three years, and that a few weeks' study in the heat of summer was too superficial to be of any real service whatever. It is true I had seen and experienced the best results from well-conducted teachers' institutes, but I had not thought these summer schools were better than the best of institutes, nor especially that they were of far greater value, inasmuch as those were generally held for two or three days, or at most for a week, while in these the attention of the earnest young teachers was held by the best instructors, the wisest specialists, for five weeks under the most favorable circumstances.

I went, therefore, to the Vineyard in July, 1887, to give a course of lectures upon American history, with the full expectation that that would be the beginning and the end of my connection with summer schools. I had no intention of going again.

I was surprised, therefore, to find on the one hand a class of very earnest young teachers, thirsty for both knowledge and wisdom, and on the other a faculty composed of some of the best teaching material to be found in the country.

With a bright and apt class of minds for pupils, these great teachers did good work—work which could not but commend itself to any observer. I was a convert to summer schools, if this was a fair sample.

Financially the institute was not at that time on a good basis. At the close of this session it was in debt for running expenses of this and previous years to the amount of about $2,500. A subscription paper was circulated among the faculty and some other persons, and about $1,200 was raised towards paying off this debt. (Let me say here, in passing, that the entire debt was paid from the extra earnings of the institute during the next three years, 1888–1890, inclusive.)

The depressed feeling was so great that two of the former directors, who hitherto had stood squarely by the institute at all times, saw no chance for its recuperation, and resigned their positions as directors and corporators. There was, however, a general disposition on the part of the directors, the faculty, and all concerned to make a vigorous effort to put the institution on a strong and efficient basis. A revised system of management was effected in 1888, and new features of importance were added to the school. The most prominent of these was a "school of methods" under the direction of Mr. A. W. Edson, agent of the Massachusetts board of education. This department held a session of three weeks, with a dozen or more teachers, in methods of

instruction in the ordinary branches of our common schools. These subjects were as follows: Arithmetic, blackboard sketching, drawing, geography, history, kindergarten, language, physiology, natural science, pedagogy, psychology, penmanship, physical exercises, school management, and vocal music.

Another important addition made to the courses of instruction was the placing of the special department of elocution and oratory under the direction of Dr. C. Wesley Emerson, of Boston. The courses and instructors this year numbered half a dozen or more in excess of the previous year. In 1887 there were less than 150 pupils, while the next year the number was nearly if not quite 250.

In 1889 it became evident that the crucial period in the history of the school was passed. The school of methods was greatly enlarged. The full number this year was 350. The department of elocution and oratory, under the efficient management of Dr. Emerson, was large and successful.

The year 1890 was in all respects the most prosperous and satisfactory the school had yet seen. A department of high-school methods was established, which proved beneficial to a large number of high-school teachers. A department of physical culture was added and Baron Nils Posse, M. G., of Boston, gave instruction in the Ling system of Swedish gymnastics. The full membership was 700, including teachers of all grades from the kindergarten to the college, and coming from thirty-seven States, Territories, provinces, and countries.

This year the institute added a dormitory to their other accommodations. They had built a café building with well-equipped kitchen and dining room several years before. These two additions to the comfort and convenience of the students have proved of great benefit to the school.

The last session of the institute, that of 1891, was in all respects the most successful; the numbers showed no falling off from the number of the previous year and the quality of teachers in attendance has materially improved.

The directors this year made important improvements to the property of the institute. A large addition (25 by 25 feet) to the kitchen was built, a new refrigerator and a new baker were added, together with a generous enlargement of the cooking outfit, the café was clapboarded, all the buildings—now five in number—were thoroughly painted and put in good order, and the unsightly gravel bank on the south of the institute was graded and sown with oats and grass seed. Altogether, during the last two years, about $3,000 has been expended upon the property of the institute, nearly all of which has been already paid from the extra earnings of the institute. It should be borne in mind that all the receipts from tuition are used to pay current expenses and the instructors. Not a dollar of tuition money has been appropriated to these permanent improvements.

The present condition of the institute is in all respects prosperous and encouraging.

I. The breadth of the work is noticeable. There are at the present time more than 50 different courses of instruction in the school. These are properly divided into (1) a school of methods for elementary studies; (2) a school of methods for high-school studies; (3) a school of elocution and oratory; (4) eighteen academic departments.

These academic departments may be grouped under the following heads: (1) The natural sciences; (2) the modern languages; (3) the ancient languages; (4) the mathematics; (5) English literature, his-

tory, and civil government; (6) music, vocal and instrumental; (7) drawing; (8) microscopy; (9) painting; (10) sloyd.

II. Its buildings, grounds, location, and general equipment are of the best. It has five buildings all devoted to its own work. Its grounds are ample, and its equipment is probably not surpassed anywhere.

III. It is incoporated under the statutes of Massachusetts as one of the permanent educational institutions of the Old Bay State, and is managed by a board of directors in the interest of education and not for personal gain.

IV. Its outlook for the future is highly promising. The directors are now perfecting their arrangements for broader operations and more extended usefulness.

New courses are to be added, the academic departments are to be strengthened, and the school of methods, both elementary and higher, is to be enlarged and improved. One of the special features to be emphasized in the school of methods is the laboratory method of teaching the natural sciences in the elementary schools. At the last session of the school 3 expert instructors gave 30 lessons to the classes, and the laboratory was open all day for work by the class, under the supervision of one or another of these 3 teachers.

Appended is a tabular view showing the present corps of teachers and the subjects taught.

School of methods.

ELEMENTARY COURSE.

Arithmetic	Geo. I. Aldrich, A. M	Superintendent of schools	Quincy, Mass.
Civil government	Wm. A. Mowry, A. M., PH. D.	Editor Education and Common School Education.	Boston, Mass
Drawing	Henry T. Bailey	Agent State board of education.	Do.

Mathematics	James Jenkins, A. B.	Principal Dix Latin School	Worcester, Mass.
Music, instrumental and vocal.	George H. Howard, A. M.		Boston, Mass.
Ornithology and zoology.	Harry Gordon White	Late of the Marion Laboratory, Woods Holl.	Taunton, Mass.
Painting	Amelia M. Watson		East Windsor Hill, Conn.
Physical culture	Brown Nils Posse, M. G.	Posse's gymnasium	Boston, Mass.
Sloyd	Everett Schwartz	Instructor in Sloyd in Comin's School.	Do.

IV.—SUMMER SCHOOLS OF HARVARD UNIVERSITY, OF THE UNIVERSITY OF VIRGINIA, AND OF OTHER SCHOOLS.

THE SUMMER SCHOOL SYSTEM OF HARVARD UNIVERSITY.

The summer school system of Harvard University owes its origin primarily to the influence which Louis Agassiz brought to bear upon the spirit of scientific education in that institution and upon this country. From the beginning of his instruction his aim was, as far as possible, to provide for the training of teachers in the methods of instruction which he pursued in the sciences of zoology and geology. His desire to secure to them such instruction was, perhaps, the stronger for the reason that he received a hearty support from the authorities of the Commonwealth of Massachusetts in the foundation and maintenance of his museum in Cambridge. From the foundation of that museum his instruction was freely open to all the teachers of the State. Experience showed that owing to their school engagements teachers found much difficulty in attending the instruction which he gave during term time. Therefore. in consultation with the assistant who was engaged with him in teaching it was determined to make an essay in the line of field instruction given during the summer vacation. This work was first begun in the year 1869, in a geological school taught in part in Cambridge and in part in western Massachusetts. Summer field work in geology designed to acquaint teachers with methods of instruction to be followed in the field has been continued with slight interruptions from that date to the present time. In 1872 a school of zoology was planned, the intention being to open it in the following summer on the island of Nantucket. The project having received a certain amount of public notice, Mr. John Anderson, a manufacturer of New York City, became interested in the plan and offered to Prof.

Agassiz as a gift the Island of Penikese, as well as the sum of $50,000 for the necessary initial expenses of the establishment. The history of this school has been already described. After the death of Prof. Agassiz the project of the Penikese school was abandoned, for the reason that it met with no public general support, and the fees paid by students would not support the costly establishment. In the second session the excess of expenditures over receipts was $3,000.

The evident utility of these summer schools of natural science, however, led in succession to the establishment of similar courses of instruction at Harvard University in chemistry (1874), botany (1874), physics (1889), field engineering (1889), physical training (1887), and to slighter experiments in the way of courses in French and German (1888). During the last summer (1891) the following courses (in order of their mention in the college catalogue) were offered:

(1) A course in the fundamental principles of chemistry; attended by 24 students.

(2) A course in qualitative analysis; attended by 14 students.

(3) A course in quantitative analysis; attended by 5 students.

(4) A course in organic chemistry; attended by 7 students.

(6) One student pursued a course in special research.

(7) A course in botany; 15 students.

(8, 9, and 10) In geology three courses were given, known as A, B, and C. Course A, in its nature elementary, was attended by 17 students. The instruction in this course was given in Cambridge and in the territory near the college. Course B was given in Massachusetts, Connecticut, and New York, and was attended by 19 students. Course C provides for the instruction of students who have been trained to the point where they may undertake field work somewhat independently, and was attended by 9 students.

(11 and 12) Two courses in physics were given; one elementary, answering approximately to the most elementary course in the college, was attended by 20 students, and a higher course in experimental physics, attended by 10 students.

(13 and 14) There were two courses in field engineering, intended to train students and teachers in the methods of topographic and railway surveying. These were attended by 8 students.

(15) A course in physical training, designed especially for those who intend to teach this subject or to act as supervisors of gymnasiums, was given in two sections, one known as the full course and the other as the course in practice. These courses were attended by the total of 83 students.

(16 and 17) Two courses in modern languages, viz, French and German, were given, the special object being to train instructors in the methods of instruction in those languages pursued in this university. These were attended by 12 students.

In addition to the above-named courses of instruction a series of classes held at the medical school in Boston especially designed to meet the needs of graduates in medicine, which were attended by 48 students.

The total number of persons pursuing summer courses maintained by the university in the year 1890 was 279. Excepting the classes in medicine, courses B and C in geology, and the courses in field engineering, all these classes were open to both men and women. Of the total about 90 were women. One hundred and fifty persons were engaged in teaching, their positions varying in grade from that of college president to assistants in the lower schools. Thirty-eight were students of

Harvard College or of the affiliated Lawrence Scientific School, who, with the exception of about half a dozen, pursued their studies for the results alone. Except in the course in geology and that in field engineering, the work done in the summer school could not be counted for any degree.

Originally the management of these schools was left altogether in the hands of the several instructors engaged in teaching. For the last four years the system has been under the charge of a committee of five appointed by the corporation of the university. This body maintains a general oversight of the schools, and provides from time to time for the institution of new experiments in this kind of teaching. The receipts of the schools were originally left in the hands of the instructors. Recently, however, an arrangement has been made whereby the corporation determines the salaries of the instructors and provides for the incidental expenses of the schools. The fees are thus paid directly into the university chest, and the classes are no longer speculative ventures on the part of the teachers giving the instruction.

The greater part of these schools are taught for the term of 6 weeks and on 6 days in each week, usually for at least 8 hours of the day. Care is taken as far as possible in the period of a long vacation to give the students in attendance on the summer schools all the advantages of the university. The museums, laboratories, libraries, and other means of instruction and exercise are all at the disposal of the summer students quite as freely as they are to those who attend in term time.

It is the hope of the committee on these courses each year to extend their range and effectiveness in such a manner that, as far as may be, they shall provide a suitable opportunity for teachers to be abreast of their work in every one of the common departments of instruction.

PROFESSIONAL AND SCIENTIFIC SCHOOLS AT THE UNIVERSITY OF VIRGINIA.

For many years there have been held summer sessions of schools at the University of Virginia, at Charlottesville.

The first started of these was that of law, which was instituted in 1870 with only 4 members, nor did the numbers much increase until 1875, when 34 were in attendance, after which the number rapidly increased, until, in 1878, there were 80 attending. From that time until now the size of the school has remained fairly constant. Ninety-seven were in attendance at the sessions of 1890–'91.

At the head of this school, now in the twenty-third year of its existence, is John B. Minor, professor of common and statute law in the University of Virginia, and author of several legal treatises. The duration of the course has averaged two months. During this short time it has been the effort not to give much positive instruction, which would obviously be impossible, but to teach the student how to study and to acquire a philosophic acquaintance with the salient elementary principles and doctrines of the law, "so as to enable him," says Prof. Minor, "to proceed with more satisfaction to himself and with more efficiency to employ the 'amiable secrets' with which, according to Coke, the science of jurisprudence abounds." The scheme of instruction includes an outline view of the rights relating to the person, to corporations, to real property, and to personal property, including contracts; the duties, powers, and rights of personal representations, including doctrines relating to legacies, and the settlement of fiduciary accounts, and the exposition of the modes of conducting actions in the courts of common law and of equity.

A summer school in chemistry has been held at the University of Virginia for the last ten or twelve years, with a small attendance of students, ranging from 3 or 4 to 10 or 12, annually. There has been no regularly prearranged course of study, the work of each man being arranged in accordance with his previous training and the objects he has in view, the limited number of students permitting of thoroughly personal teaching. There have been informal talks or lectures, with exercises on the blackboard or on paper in chemical calculation, but most of the time has been taken up with practical laboratory work. Prof. J. W. Mallet has charge of this work.

Besides these schools of law and chemistry, there have been held at Charlottesville summer classes in mathematics and engineering, medicine, and biology. Summer instruction in the first of these subjects has been given since 1878 for six weeks each summer. The average attendance has been from 8 to 10. The subjects taught have been: In mathematics, trigonometry, analytical geometry, calculus, differential equations, and theoretical mechanics; in engineering, land and engineering surveying, strength of materials, and bridge and roof construction. At the head of this school is Prof. Wm. M. Thornton.

The summer school of medicine has been but recently started, the first session being held in 1891. In connection with this school is to be given in the biological laboratory of the university a course upon normal histology and bacteriology. The teachers are the professors of the university, lecturing on the subjects they teach during the regular session, namely: Chemistry, Dr. J. W. Mallet; anatomy, W. B. Fowles; histology and bacteriology, A. H. Tuttle; physiology, Dr. W. G. Christian.

SUMMER CLASSES FOR TEACHERS AT CORNELL UNIVERSITY.

The trustees of Cornell University have issued the announcement that there is to be opened in the summer of 1892, a number of classes for teachers. The session is to last from July 7 to August 18, and there is to be given instruction in mathemathics, botany, chemistry, physics, philosophy, English, French, German, Greek, Latin, classical archæology, and physical training.

THE NATIONAL SUMMER SCHOOL OF METHODS.[1]

AT GLENS FALLS, N. Y.

This school is the union of several other schools, and the history can best be given in parts up to the time of union. Nine years ago Mr. Charles F. King, now master of the Dearborn School, Boston, Mass., formed the idea of organizing a school of methods. He associated with himself in the work Supt. Balliet, now of Springfield, Mass.; Prof. Walter S. Perry, now of Pratt Institute, Brooklyn, N. Y.; Walter S. Parker, now master of Everett School, Boston, Mass.; Prof. Payne, now of Vanderbilt University, Tennessee, and many other eminent educators. This was not the first summer school, but it was the first school of methods. Its meetings were held at Saratoga, N. Y. Its sessions were largely attended from the first, the students coming from many States and thus justifying the name, The National School of Methods. The school continued to grow in numbers and strength. Its work broadened and included academic work in some subjects as well as work in methods. When this school had been in operation

[1] Kindly furnished by Supt. Sherman Williams.

about four years another school was started at Round Lake, N. Y. It was not as large as the National School, but each school hurt the other in the matter of attendance, being so near together, and the two were united under the management of Mr. King. The first year the session was divided into two parts, two weeks at Saratoga and two weeks at Round Lake. This plan did not prove satisfactory, and thereafter the whole session was at Round Lake.

At the same time the National School was started at Saratoga a movement was made at Glens Falls that was not thought to be more than local and a temporary matter at that. At the suggestion of a few of the teachers of Warren County, N. Y., Supt. Ballard, of Jamaica, N. Y., and Supt. Williams, of Glens Falls, N. Y., met for one week such teachers as cared to come to the meetings for instruction in physical training and primary methods. No fee was charged; no public announcement was made. There were about 35 teachers present. At the close of the session they expressed a desire that there should be a session again the following year. This was arranged, and with Messrs. Ballard and Williams were associated Mrs. N. R. Baldwin, who had been a successful teacher at Quincy, Mass., under Col. Parker, and Miss Kate Raycroft, of Prince School, Boston. A small fee was charged, enough to pay these last two for their services; a few circulars were issued; the work was somewhat enlarged; Mr. Ballard kept the physical training as before; Mr. Williams had elementary science, Mrs. Baldwin primary work, Miss Raycroft grammar work. It was wholly work in methods. There were about 100 present at this session and a dozen or more counties of the State were represented. Those present asked to have the school continued and drawing and elocution added to the course. Now, for the first time it was recognized that the school was likely to continue for some years at least. Miss Swayze, of New York, was engaged to give instruction in elocution, and H. P. Smith, head drawing teacher of Brooklyn, N. Y., for drawing. Mr. Smith has been with the school from that time till now.

The following year the work of the school was greatly enlarged and many instructors of national reputation engaged. In the meantime a summer school had been organized at Niagara Falls, N. Y. After two sessions it was united with the school at Glens Falls.

This brought three schools—the Glens Falls Training School, the National School, and the Round Lake School—close together, practically occupying the same field—three schools where only one was needed. As has been stated, the National and Round Lake schools were united. The Glens Falls Training School had been run by Messrs. Ballard and Williams at a steady financial loss. At the end of the fifth year they announced their intention of discontinuing the school on account of the loss at which it was carried on. The leading professional and business men of the place formed an association to carry on the school and raised a fund to guarantee the school against all loss. They have contributed in this way about $1,500 up to this time. The school was continued another year, and at that time was consolidated with the school at Round Lake. This brought together in one school all the schools that had been organized in this section. The union is known as the National School of Methods. This is the history of the school.

The work has grown year by year. The best instructors obtainable are engaged. The instructors' salaries alone amount to more than $1,000 a week. The entire expense of a session amounts to about $6,000. More than 30 lecturers appear before the school each year. The work now includes both methods and academic work.

The work of last session was as follows:

PSYCHOLOGY AND PEDAGOGICS, BY DR. E. E. WHITE, OF CINCINNATI, OHIO (15 LECTURES).

Methods in subject-matter.

Arithmetic, Supt. G. I. Aldrich, Quincy, Mass., 8 lectures.
Geography, Principal Charles F. King, Boston, Mass., 10 lectures.
Language and grammar, Supt. I. Freeman Hall, Leominster, Mass., 10 lectures.
History, Prof. B. A. Hinsdale, University of Michigan, 5 lectures.
Elementary language, Miss Anna B. Badlam, Lewiston, Me., 10 lectures.
Primary work, Miss Sarah Arnold, Minneapolis, Minn., 20 lectures.
Elementary natural science, Prof. John F. Woodhull, New York, 5 lectures.
Kindergarten work, Miss Hart, Toronto, Canada, 10 lectures.
Natural history, Prof. Austin C. Apgar, Trenton, N. J., 5 lectures.
Lloyd work, Principal Gustaf Larsson, Boston, Mass., 5 lectures.
Physical training, Supt. W. J. Ballard, Jamaica, Long Island, 5 lectures.

Academy work (3½ weeks).

Modern and ancient languages, Prof. Otto H. L. Schwetsky, Oswego, N. Y.
Methods in drawing, H. P. Smith, Brooklyn, N. Y., assisted by Miss Bertha Hintz, Boston, Mass.; Prof. Henry T. Bailey, Massachusetts; N. L. Berry, superintendent of drawing, Lynn, Mass.
Botany and zoology, Prof. Austin C. Apgar, Trenton, N. J.
Form and drawing, Prof. Walter S. Perry, Brooklyn, N. Y., assisted by Mrs. Mary D. Hicks, Boston, Mass., and Miss Stella Skinner, Scranton, Pa.
Reading and elocution, Prof. L. A. Butterfield, Boston, Mass.
Penmanship, Prof. Lyman D. Smith, Hartford, Conn.
English literature and philology, Dr. Thomas Hume, University of North Carolina.
Homemade apparatus, Prof. John F. Woodhull, New York City.
Physics and chemistry, Prof. John F. Woodhull, New York City.
Physical training, Supt. W. J. Ballard, Jamaica, Long Island.

Lectures on supervision and normal training.

Dr. E. E. White, Cincinnati, Ohio.
Prof. B. A. Hinsdale, University of Michigan.
Prof. Austin C. Apgar, State Normal School, Trenton, N. J.
Supt. G. I. Aldrich, Quincy, Mass.
Miss Sarah L. Arnold, supervisor of primary schools, Minneapolis, Minn.
Miss Anna B. Badlam, principal Training School, Lewiston, Me.
Supt. S. T. Dutton, Brookline, Mass.
Supt. A. P. Marble, Worcester, Mass.
Dr. E. A. Sheldon, State Normal School, Oswego, N. Y.
Prof. Charles F. Carroll, New Britain, Conn.
Principal James M. Sawin, Providence, R. I.

The school was attended at the last session by nearly 500 students, coming from 34 different States. Students came from all grades of schools—from the little country wayside school, from the graded schools, from academies, from primary, grammar, and high schools, from normal schools and colleges, from public and private schools, and from parochial schools. All classes of teachers attended—those who were yet to get their experience, those who had taught all the way up to forty-nine years, those who were grade-room teachers, principals of departments, principals of schools, village and city superintendents. There were a large number of supervisory teachers in attendance. This commingling of teachers of all grades and from all sections of the country has of itself proved to be of great value.

Other schools which have held summer sessions are: The Wisconsin Summer School, at Madison, Wis.; Campbell University Summer School, Holton, Kans.; Flint Normal College Summer School, at Flint, Mich.;

Asbury Park Seaside School of Pedagogy; Niantic School for Teachers; Sweet Springs School, Missouri; Morehead City School, North Carolina; Summer School at Ann Arbor, Mich.; School for Popular and Normal Study, New London, N. H.; Western Normal Music School, Highland Park, Ill.; Indiana School of Methods, Indiana, Pa.; the Seaside Assembly, Avon-by-the-Sea, N. J.; Deerfield Summer School of History and Romance; Indiana University Summer School, Bloomington, Ind.; Seaside Summer Normal Institute, Corpus Christi, Tex.; Lake Minnetonka Summer School, Excelsior, Minn.; Blackboard School, Cedar Falls, Iowa; Springfield Summer School, Springfield, Mass.; Summer Schools of Dartmouth College; Normal and Business College, Fremont, Nebr.; Kindergarten, Mountain Lake Park, W. Va.

Concerning very few of these schools has the Bureau been able to obtain information.. Many of them are now undoubtedly not in existence.

The Wisconsin Summer School for Teachers was opened for the first time in the summer of 1887. Its purpose was to improve the methods of instruction in the high schools of the State, especially in the branches of natural science. The Wisconsin Teachers' Association had been interested in the movement, the privilege of using the lecture rooms and laboratories of the University of Wisconsin had been secured, and the cooperation of the State superintendent and of the board of regents of normal schools had been promised. Aside from these aids the movement was essentially a private enterprise. At the first session classes were formed in psychology, pedagogy, physics, geography, physiology, botany, chemistry, and Latin. All but one of those engaged in the work of instruction were professors in the university. The attendance at this session reached 40, all except 4 of whom came from Wisconsin. The year following Latin was dropped from the list of studies and zoology added, but it was not found practicable to give to the school the enlargement desired by its managers, for the lack of funds for its support. In 1889 a small appropriation for it was secured from the legislature, which rendered possible an expansion of the course of studies and more extensive advertising. From this time its growth has been steady year by year. In 1891 the enrollment rose to 151; instruction was given in 10 different departments, and 28 classes, and there were 33 students in attendance from without the State. The school has been from the beginning designed especially for high-school teachers, and its enrollment has been almost wholly of that class of teachers. There have been also teachers from normal schools and colleges, with a few from grammar grades. A few students have attended every year since the opening of the school, and these have usually devoted themselves to continuous work in one of the laboratories. The number who attend for more than one year is increasing, and indicates the possibility of the development of a continuous and somewhat extended course of study by means of this summer school.

The Campbell University, Holton, Kans., has held summer sessions during the last four years for the instruction of teachers. The president is E. J. Hoenshel.

The Flint Normal College, Flint, Mich., has held a summer review term of ten weeks since 1888. At the session of 1890 85 students and teachers were in attendance.

The Asbury Park Seaside School of Pedagogy was opened in 1887 with a corps of 24 teachers. The attendance the first year was large, but declined the following years, and the school is not now in existence.

The Niantic School for Teachers was started in 1888, with the sup-

port of the State of Connecticut. There were no tuition fees for teachers, and, as a result, there was a large attendance, 250 or more. In 1887 the attendance was less, and in 1890 no session was held.

The Seaside Assembly, Avon-by-the-Sea, N. J., has held 8 sessions, and is at present in a flourishing condition. At the last session instruction was given in the following departments: Biology, lectures and laboratory practice, mathematics, political science, languages, Bible study and Sunday-school work, Christian philosophy, American literature, Delsartean system of physical culture, elocution and oratory, kindergarten, art, writing, and music.

The Seaside Summer Normal Institute at Corpus Christi, Tex., held its first session in 1891. At its head is Mr. J. E. Rodgers who has conducted various similar summer institutes in the State at Waco and Marshall.

The Lake Minnetonka Summer School, Excelsior, Minn., has held 5 sessions, and with a very considerable attendance, more than 300 in 1890. The work of the school is planned with especial reference to the needs of teachers. Instruction at the last session embraced the following subjects: Psychology and pedagogics (20 lectures) methods of teaching, English literature, rhetoric and elocution, Latin, civics, physiology, history, arithmetic, mathematics, physics, botany, chemistry, drawing, commercial law and bookkeeping, music, and synthetic reading.

* Statistics of 1890-'91.
a Estimate based upon the annual rate of increase or decrease from 1880 to 1890.

enrollment, attendance, supervising officers, teachers, etc.—Continued.

Number of days the public schools were actually in session.	Aggregate number of days attendance in all public day schools.	Average daily attendance in public day schools.	Number of supervising officers.			Number of regular teachers.			Number of buildings used for school purposes.	Total number of seats or sittings for study in all public schools.	Number of years required to complete the entire course of study.

*Statistics of 1890-'91.
a Estimate based upon the annual rate of increase or decrease from 1880 to 1890

enrollment, attendance, supervising officers, teachers, etc.—Continued.

Number of days the public schools were actually in session.	Aggregate number of days attendance in all public day schools.	Average daily attendance in public day schools.	Number of supervising officers.			Number of regular teachers.			Number of buildings used for school purposes.	Total number of seats or sittings for study in all public schools.	Number of years required to complete the entire course of study.

*Statistics of 1890-'91.

a Estimate based upon the annual rate of increase or decrease from 1880 to 1890

enrollment, attendance, supervising officers, teachers, etc.—Continued.

Number of days the public schools were actually in session.	Aggregate number of days attendance in all public day schools.	Average daily attendance in public day schools.	Number of supervising officers.			Number of regular teachers.			Number of buildings used for school purposes.	Total number of seats or sittings for study in all public schools.	Number of years required to complete the entire course of study.

* Statistics of 1890-'91.

a Estimate based upon the annual rate of increase or decrease from 1880 to 1890.

enrolment, attendance, supervising officers, teachers, etc.—Continued.

Number of days the public schools were actually in session.	Aggregate number of days attendance in all public day schools.	Average daily attendance in public day schools.	Number of supervising officers.			Number of regular teachers.			Number of buildings used for school purposes.	Total number of seats or sittings for study in all public schools.	Number of years required to complete the entire course of study.

* For 1890-'91.

a The principal makes the following remark on these questions: "Our pupils are sent out by the month to teach in our city schools for experience. We have no training schools."

b No answer to these inquiries. *c* Of this $16,500 was income from State endowment. *d* Just completed a building costing for site and structure $150,000.

e Discontinued in June, 1890. The University of Minnesota will hereafter train teachers for the city schools.

TABLE 19.—*Colleges of agriculture and the mechanic arts endowed by act of Congress, etc.*—PART II—Continued.

Institution and post-office.	Receipts.				Expenditures.		
	From the State, endowment, fees, and other sources.	From United States land-grant act of 1862.	For experiment station, act of United States, 1887.	From United States endowment, act of 1890.	For agriculture and mechanic arts.	For experiment station.	For other departments.

* For 1890–'91.

a The principal makes the following remark on these questions: "Our pupils are sent out by the month to teach in our city schools for experience. We have no training schools."

b No answer to these inquiries. *c* Of this $16,500 was income from State endowment. *d* Just completed a building costing for site and structure $150,000.

e Discontinued in June, 1890. The University of Minnesota will hereafter train teachers for the city schools.
